The College of Agriculture and Natural Resources was founded as the Agricultural College of the State of Michigan in 1855. It was the first college at Michigan State University, the first land-grant institution in the United States. The College of Agriculture and Natural Resources is committed to advancing knowledge and transforming lives in communities, agriculture and natural resources. Dynamic, broad-ranging programs include areas such as sustainable agriculture and natural resource systems; food and nutrition; community, family and youth development; technology, management, and design; and international programs.

The College educates students to be scientists, leaders, and stewards of our natural resources. Students learn to manage resources, people, and technology in order to improve the use, conservation and renewal of the natural and fabricated environments; to enhance community and economic development; and to advance food safety and nutrition.

Today’s pioneering research in the College of Agriculture and Natural Resources advances science, technology, management, design, and communities. Faculty research includes areas such as animal and plant biotechnology, control of invasive species, control of pathogens, protection of biodiversity, management of urban sprawl, environmental remediation, wildlife management, use of biosensors to detect foodborne pathogens, tourism, ergonomics and lean construction, and the sustainability of agricultural and natural resource systems. Faculty members integrate new understandings into subject matter presented in courses and extend new knowledge to the community, state, nation and beyond – epitomizing the excellence of the land-grant tradition.

Faculty members cultivate a learning environment that educates and prepares students for graduate study or to become industry or community leaders. Academic programs apply biological, physical, social and business sciences to the management of natural resources, agriculture, food, materials, design, and communities in an international, environmentally sound framework. Graduates of the College have the tools they need to undertake endeavors that ensure the sustainability of food, prosperity and leisure activities in a world environment that has finite resources. For those interested in short-term certificate programs, the Institute of Agricultural Technology offers a variety of technical programs that are less than two years in length.

UNDERGRADUATE PROGRAMS

In each of these programs, the College offers a highly student-oriented advising system. Students are assigned an academic adviser to suggest courses and career emphases. In the student-adviser relationship, the capabilities, aspirations and goals of the students remain paramount throughout their academic careers. Academic advisers work closely with students from the time they express an interest in the major, and undergraduate research is encouraged in all majors.

For students who select agriculture or natural resources as their fields of study, but wish to delay their choice of a specific field until a later date, a no-preference program is offered. Under this arrangement, freshmen enrolled in the Undergraduate University Division may designate their major preferences as Agriculture and Natural Resources No-Preference. Students selecting this major preference are advised by faculty members in the College of Agriculture and Natural Resources. Through careful selection of courses, they are encouraged to explore a variety of areas to help in selecting a major. The key element of this program is its flexibility. Students may remain in it until they attain junior stand-
ing, or they may select other major preferences at any time before becoming juniors.

Bachelor of Science degree programs are offered in the following areas: Agriscience; Agriculture and Natural Resources Communications; Animal Science; Construction Management; Crop and Soil Sciences; Dietetics; Entomology; Environmental Economics and Policy; Environmental Soil Science; Environmental Studies and Applications; Fisheries and Wildlife; Food Science; Horticulture; Packaging; Park, Recreation and Tourism Resources; Plant Pathology; and Technology Systems Management. A Bachelor of Arts degree program is offered in Interior Design and a Bachelor of Landscape Architecture degree program in Landscape Architecture.

The College of Agriculture and Natural Resources cooperates with the College of Engineering in offering an undergraduate program in Biosystems Engineering. The College also participates with the College of Social Science in offering an undergraduate program in Urban and Regional Planning.

Honors Study

The College of Agriculture and Natural Resources encourages honors students to develop enriched and distinctive undergraduate programs. In each of the major fields offered in the college, members of the faculty are carefully selected to serve as departmental Honors College advisers. These advisers assist each Honors College student in planning a rigorous and balanced program that reflects special individual interests and competencies. In addition to the University-wide array of introductory Honors courses available to exceptional students, the College encourages participation in research and enrollment in graduate courses and independent study.

Opportunities for Individual Emphasis

In furthering the students' training, the flexible nature of the program in each major makes it possible for students to pursue areas of special interest through regular course work, special seminars, research and travel. By anticipating new and growing areas of need for trained personnel, the College makes it possible for students to prepare themselves adequately in these areas. Following are a few of the opportunities for special emphasis available to students in any major within the College.

International Study. The College offers opportunities for short-term and semester-length study abroad programs around the world. Undergraduates are encouraged to make an overseas study experience part of their curriculum. In addition, students in the College of Agriculture and Natural Resources, and others interested in agricultural development abroad, may select courses from numerous subject areas. Offerings in agricultural economics, agricultural engineering, animal science, crop and soil sciences, extension personnel development, forestry, horticulture and resource development have special relevance to international agriculture and rural development. Emphasis is placed on environmentally sound crop and animal production, application of new technical knowledge, planning and administration, and efficient use of human and natural resources for developing countries.

Science Emphasis. Many students realize early in their college years that they wish to prepare for careers in research or university teaching. Academic advisers assist them in selecting science courses (biological, physical or social) that will offer the best possible preparation for graduate study.

Freshmen

Students meeting the general requirements for admission shown in the Undergraduate Education section are enrolled in the Undergraduate University Division but may declare a major preference in the College of Agriculture and Natural Resources and be assigned an academic adviser in the College. Freshmen who declare a major will usually have both an Undergraduate University Division adviser and an adviser in their major.

Admission as a Junior to the College of Agriculture and Natural Resources

1. Completion of a minimum of 56 credits acceptable to the College with an academic record, which at least meets the requirements of Academic Standing of Undergraduate Students.
2. Acceptance as a major in one of the academic programs of the College.

The number of students admitted as juniors to the construction management major and the packaging major are limited. For additional information, refer to the statements on the School of Planning, Design and Construction and the School of Packaging.

Graduation Requirements

1. The University requirements for bachelor's degrees as described in the Undergraduate Education section of the catalog.

Alternative tracks to Integrative Studies in General Science have been approved for selected majors leading to the Bachelor of Science degree in the College. For additional information, refer to the lists of requirements for the major and degree programs that appear in the statements on the departments.

The completion of the College of Agriculture and Natural Resources mathematics requirement referenced in item 2. a. below may also satisfy the University mathematics requirement.

2. The requirements of the College of Agriculture and Natural Resources for the Bachelor of Science degree that are listed below:
   a. Mathematics 110 or 116. This requirement may be satisfied by placing into a calculus course based on a MSU placement test.
   b. Economics 201 or 202.
   c. At least 26 credits in courses in the College.
   d. The specific requirements for a major in the College.

Students who are enrolled in bachelor's degree programs in the College of Agriculture and Natural Resources may elect a Specialization in Environmental Studies. For additional information, refer to the Specialization in Environmental Studies statement in the College of Natural Science section of this catalog.

SPECIALIZATION IN AGRICULTURAL AND NATURAL RESOURCES BIOTECHNOLOGY

The Specialization in agricultural and Natural Resources biotechnology is available as an elective to students who are enrolled in Bachelor of Science degree programs with majors in animal science, biosystems engineering, crop and soil sciences, fisheries and wildlife, food science, forestry, and horticulture. The specialization is administered by the College of Agriculture and Natural Resources.
The specialization provides the opportunity for students who are enrolled in biological science-related undergraduate programs to become familiar with the concepts, techniques, and issues related to modern biotechnology. The specialization is designed for students who may be planning to pursue graduate study in biotechnology-related disciplines or who may be interested in careers with corporations or agencies for which a basic familiarity with biotechnology is a prerequisite.

With the approval of the department and college that administer the student's degree program, courses that are used to satisfy the requirements for the specialization may also be used to satisfy the requirements for the bachelor's degree.

Requirements for the Specialization in Agricultural and Natural Resources Biotechnology

The student must complete:

1. All of the following courses (11 credits):
   - BMB 401 Biotechnology ................................. 4
   - CSS 451 Cellular and Molecular Principles and Techniques for Plant Sciences ............................ 4
   - HRT 486 Biotechnology in Agriculture: Applications and Ethical Issues ................................ 3

2. One of the following courses (3 or 4 credits):
   - CSS 350 Introduction to Plant Genetics .......................... 3
   - ZOL 341 Fundamental Genetics ................................. 4

Upon completion of the requirements for the Specialization in agricultural and Natural Resources Biotechnology, the student should contact the Director of Academic Affairs of the College of Agriculture and Natural Resources and request certification for the completion of the specialization. After the certification is approved by the Director of Academic Affairs of the College of Agriculture and Natural Resources, the Office of the Registrar will enter on the student's academic record the name of the specialization and the date that it was completed. This certification will appear on the student's transcript.

SPECIALIZATION IN CONNECTED LEARNING IN AGRICULTURE AND NATURAL RESOURCES

The Specialization in Connected Learning in Agriculture and Natural Resources will be available as an elective to undergraduate students who meet specified requirements. This specialization is organized in two areas: (1) environmental design and (2) interior design and facilities management.

The College of Agriculture and Natural Resources seeks to provide opportunities for advanced study, original research and supervised experience in teaching, coupled with a broadening of a student's educational background.

The College of Agriculture and Natural Resources offers graduate study leading to the Master of Science degree in the following majors: agricultural economics; agricultural engineering; agricultural technology and systems management; animal science; construction management; community, agriculture, recreation and resource studies; crop and soil sciences; fisheries and wildlife; food science; forestry; horticulture; human nutrition; packaging; plant breeding and genetics—crop and soil sciences; plant breeding and genetics—forestry; plant breeding and genetics—horticulture; and plant pathology. A master's degree program is offered jointly with the College of Business. Qualified students may earn joint master's degrees in forestry and business administration.

The College of Agriculture and Natural Resources offers graduate study leading to the Master of Arts degree in the following two areas: (1) environmental design and (2) interior design and facilities management.

The Master of Urban and Regional Planning degree program with a major in urban and regional planning is offered through the College of Social Science. For information about that program, refer to the statement on the School of Planning, Design and Construction in the College of Social Science section of this catalog.

TEACHER CERTIFICATION OPTIONS

The agriscience disciplinary major leading to the Bachelor of Science degree in the College of Agriculture and Natural Resources is available for teacher certification.

Agriscience and environmental science disciplinary minors in the College of Agriculture and Natural Resources are also available for teacher certification.

In addition, vocational endorsement in agricultural education is available to persons who meet specified requirements.

Students who elect the agriscience disciplinary major, or the agriscience disciplinary minor, must contact the Department of Community, Agriculture, Recreation and Resource Studies.

Students who elect the environmental science disciplinary minor must contact the Department of Fisheries and Wildlife.

For additional information, refer to the statement on the agriscience disciplinary major and to the statement on TEACHER CERTIFICATION in the Department of Teacher Education section of this catalog.

GRADUATE STUDY

Through its graduate programs the College of Agriculture and Natural Resources seeks to provide opportunities for advanced study, original research and supervised experience in teaching, coupled with a broadening of a student's educational background.

The College of Agriculture and Natural Resources offers graduate study leading to the Master of Science degree in the following majors: agricultural economics; agricultural engineering; agricultural technology and systems management; animal science; construction management; community, agriculture, recreation and resource studies; crop and soil sciences; fisheries and wildlife; food science; forestry; horticulture; human nutrition; packaging; plant breeding and genetics—crop and soil sciences; plant breeding and genetics—forestry; plant breeding and genetics—horticulture; and plant pathology. A master's degree program is offered jointly with the College of Business. Qualified students may earn joint master's degrees in forestry and business administration.

The College of Agriculture and Natural Resources offers graduate study leading to the Master of Arts degree in the following two areas: (1) environmental design and (2) interior design and facilities management.

The Master of Urban and Regional Planning degree program with a major in urban and regional planning is offered through the College of Social Science. For information about that program, refer to the statement on the School of Planning, Design and Construction in the College of Social Science section of this catalog.
Students may complete a professional dietetics internship certificate program through the Department of Food Science and Human Nutrition.

The Doctor of Philosophy degree may be earned with majors in agricultural economics; agricultural engineering; agricultural technology and systems management; animal science; community; agriculture, recreation and resource studies; construction management; crop and soil sciences; fisheries and wildlife; food science; forestry, horticulture; human nutrition; human nutrition—environmental toxicology; packaging, plant breeding and genetics – crop and soil sciences; plant breeding and genetics—forestry; plant breeding and genetics—horticulture; and plant pathology.

The following dual Juris Doctor (JD) programs with Michigan State University - College of Law are available through the College of Agriculture and Natural Resources: MSU MS degree program with a major in Fisheries and Wildlife and MSU/College of Law JD; MSU MS degree program with a major in Forestry and MSU/College of Law JD.

The departments of Plant Pathology; Crop and Soil Sciences; Entomology, Fisheries and Wildlife, Forestry, and Horticulture are affiliated with the Doctor of Philosophy degree program with a major in ecology, evolutionary biology and behavior. For additional information, refer to the statement on the doctoral program in ecology, evolutionary biology and behavior in the College of Natural Science section of this catalog.

Students who are enrolled in master’s degree programs in the College of Agriculture and Natural Resources may elect the Master’s Specialization in Agribusiness. For additional information, refer to the Master’s Specialization in Agribusiness statement in the Department of Agricultural Economics section of this catalog.

Students who are enrolled in Master of Science degree programs in the departments of Plant Pathology; Crop and Soil Sciences; Entomology; Fisheries and Wildlife; Forestry or Horticulture may elect a Specialization in ecology, Evolutionary Biology and Behavior. For additional information, refer to the statement on the specialization in the College of Natural Science section of this catalog.

Students who are enrolled in doctoral degree programs in departments and programs emphasizing environmental science and policy may elect the Graduate Specialization in Environmental Science and Policy. For additional information, refer to the Graduate Specialization in Environmental Science and Policy statement in the College of Social Science section of this catalog.

Students who are enrolled in master’s and doctoral degree programs in the College of Agriculture and Natural Resources, the College of Natural Science, and the College of Veterinary Medicine may elect the Graduate Specialization in Fish and Wildlife Disease Ecology and Conservation Medicine. For additional information, refer to the statement on Graduate Specialization in Fish and Wildlife Disease Ecology and Conservation Medicine.

Students who are enrolled in Master of Science degree programs in the departments of Agricultural Economics, Biosystems and Agricultural Engineering, Animal Science, Entomology, Food Science and Human Nutrition, Horticulture, Packaging, and Plant Pathology may elect a Specialization in Food Safety. For additional information, refer to the statement on the specialization in the College of Veterinary Medicine section of this catalog.

Students who are enrolled in Master of Science and Doctor of Philosophy degree programs in the Department of Food Science and Human Nutrition may elect Specialization in Infant Studies. For additional information, refer to the statement on Interdepartmental Graduate Specializations in Infant Studies in the College of Social Science section of this catalog.

Students who are enrolled in Master of Science and Doctor of Philosophy degree programs in the departments of Agricultural Economics; Fisheries and Wildlife; or Forestry may elect a Specialization in Resource Economics. For additional information, refer to the statement on Interdepartmental Graduate Specializations in Resource Economics.

Students who are enrolled in master’s and doctoral degree programs at Michigan State University may elect a Specialization in Food and Agricultural Standards. For additional information, refer to the statement on Graduate Specialization in Food and Agricultural Standards in the College of Social Science section of this catalog.

The regulations and requirements presented here are the minimum for the College as a whole and must be fulfilled by all students in all departments. Any requirements not set forth herein or in University regulations are matters of departmental policy. Individual departments may have additional requirements beyond the minimum established for the College. Admissions to graduate programs may be limited by unit resources.

**Master of Science**

In addition to meeting the requirements of the University, students must meet the requirements specified below.

**Admission**

Acceptance of an applicant is determined by the department in which the applicant wishes to do his or her major work, with the approval of the dean of the college, after consideration of the applicant's academic record, experience, personal qualifications, and objectives. Applicants who are admitted are classified in one of two groups: regular, for students who are fully qualified to undertake master’s degree programs, or provisional, for students who have some remediable inadequacy of qualifications, or deficiency in subject matter preparation.

Normally an undergraduate grade-point average of 3.00 (B) or higher is required for admission to any status. Credits earned in regular or provisional status are acceptable as part of a student's degree requirements upon approval of the major professor and the dean.

**Requirements for the Master of Science Degree**

**PROGRAM.** The student, in consultation with the major professor, develops the prescribed program of study. The program should be established at the earliest possible date, consistent with departmental requirements, and filed with the department and the dean. Two plans of study are available:

- **Plan A**—Completion of a research program and preparation of a satisfactory thesis are required. Research credits must equal at least 6, but not more than 10.
- **Plan B**—Preparation of a thesis is not required. The program may include research or special problems not exceeding 6 credits.

**EXAMINATION.** The candidate must pass an oral final examination on the program of study and research before a committee selected by the major professor and approved by the department chairperson. The committee consists of at least three members including the major professor and at least one member from another department. Other faculty members may attend at the department chairperson’s or school director’s discretion.

In case of a failure, the student may appear for re–examination at a time specified by the examining committee.
Academic Standards

FOR RETENTION. The major professor and department in which the student is majoring review and make a decision concerning the retention of any student failing to fulfill departmental requirements, and may dismiss a student at the end of any semester. Notice of dismissal from a departmental program is given to the student by the department chairperson, and the dean is notified of such action.

Residence

The student should spend at least one full semester in residence on campus. At least 8 credits excluding research must be taken in course work on the campus in East Lansing.

Doctor of Philosophy

The Doctor of Philosophy degree is granted for distinctive attainment by the student in a special field, as evidenced by a dissertation which shows independent and creative thought and by passing detailed examinations over the student's chosen fields.

In addition to meeting the requirements of the University, students must meet the requirements specified below.

Admission

Acceptance of an applicant is determined by the department in which the applicant wishes to do his or her major work, with the approval of the dean of the college, after consideration of the applicant's academic record, experience, personal qualifications, and objectives. Applicants who are admitted are classified in one of two groups: regular, for students whose records and qualifications show that they are ready to pursue a course of study toward the doctorate, or provisional, for students who, although their previous work appears to have been at an acceptably high academic level, nevertheless lack some important requirements for the course of study they intend to follow toward the doctorate. Such deficiencies will often necessitate the completion of collateral courses for which credit will not be counted toward the degree.

Normally a grade-point average of 3.00 (B) or higher in all previous academic work is required for admission to regular or provisional status.

Admission is open to students with a master's degree or its equivalent; however, completion of a master's degree or its equivalent is not a guarantee of admission to a doctoral program.

It is usually desirable, but not mandatory, that a student earn a master's degree before proceeding to a doctoral program. Students who plan to pursue work toward a doctorate without earning a master's degree will be enrolled as master's students until they have earned 30 graduate credits.

Credits earned in regular or provisional status are acceptable as part of a student's degree requirements upon approval by the guidance committee and the dean.

Examinations

COMPREHENSIVE. A comprehensive knowledge of the student's major and related fields must be demonstrated by examination, written or written and oral, to the guidance committee. If the student fails to pass, there may not be a reexamination until after one semester of additional work toward the degree is completed.

FINAL. The final oral examination, primarily in defense of the dissertation, is conducted by the guidance committee, supplemented, at the discretion of the dean, by two appointed faculty members. Other faculty members may attend at the chairperson's discretion. The final oral examination cannot be conducted before the dissertation is in the final form unbound.

Academic Standards

FOR RETENTION. The guidance committee and the department in which the student is majoring review and make a decision concerning the retention of any student failing to fulfill departmental requirements, and may dismiss a student at the end of any semester. Notice of dismissal from a departmental program is given to the student by the department chairperson, and the dean is notified of such action.

Residence

One academic year of residence after completion of the master's degree or its equivalent is required. This permits the student to work with and under the direction of the faculty, and to engage in independent and cooperative research utilizing University facilities. Normally, the year of residence will be made up of two semesters involving completion of at least 9 credits of graduate work each semester.

INTERDEPARTMENTAL GRADUATE PROGRAM in PLANT BREEDING and GENETICS

The interdepartmental graduate program in Plant Breeding and Genetics is jointly administered by the departments of Crop and Soil Sciences, Forestry, Horticulture, and Plant Biology. Faculty who have been identified by the chairpersons of these departments are members of the Plant Breeding and Genetics Program. One member of the faculty is designated as the Coordinator and oversees the program.

The interdepartmental graduate program in Plant Breeding and Genetics is designed to:

1. Provide contemporary graduate education and training in the field of plant breeding and genetics, so that students may be prepared to teach, conduct independent research, and use modern technologies.
2. Enable students to gain knowledge in the various disciplines that support plant breeding activities through course work in such fields as biochemistry, plant physiology, entomology, plant pathology, and food science.
3. Provide an intellectual and resource environment conducive to graduate research.
4. Foster an awareness of plant breeding and genetics programs in both the public and private sectors.

Master of Science

In addition to meeting the requirements of the University and of the College of Agriculture and Natural Resources, students must meet the requirements specified below.

Admission

A student seeking admission to the Plant Breeding and Genetics program at the master's level must have completed a Bachelor of Science degree in a plant science or related field with an emphasis on plant breeding and genetics. A minimum grade–point average of 3.00 in courses in agricultural, biological, and physical sciences and an academic background sufficient to indicate probable success in the program are required.

To be considered for admission to the program, the student must be accepted as an advisee by a faculty member in the student's major department who is also a member of the Plant
Breeding and Genetics faculty. Admission to the program is by approval of one of the four participating departments, the Plant Breeding and Genetics faculty, and the Coordinator of the Plant Breeding and Genetics Program. In special cases, applicants with deficiencies in background courses may be admitted on a provisional basis. Such students will not be considered for advanced degrees until they have fulfilled the requirements for admission to regular status.

Requirements for the Master of Science Degree

The student’s guidance committee, selected in consultation with the student and the major professor at the time that the student is admitted to the program, plans the student’s course of study with the student’s particular interests, capabilities, and professional goals in mind. The student’s guidance committee is composed of three faculty members; the student’s major professor and at least one other person must be members of the Plant Breeding and Genetics faculty. At least one member must be from a department other than the one that administers the student’s major.

Only Plan A (with thesis) is available. The student is required to complete courses, learn research methodologies, and conduct thesis research pertinent to the plant species under study. The student must complete two credits of Horticulture 892, and two core courses as specified by the Plant Breeding and Genetics faculty. Credits in Master's Thesis Research (course number 899) must total at least 6 but not more than 10. One semester of teaching experience is also required. The student’s program will be reviewed by the Plant Breeding and Genetics faculty. The degree is conferred upon recommendation of the department, the Coordinator of the Plant Breeding and Genetics Program, and the Dean of the College.

Doctor of Philosophy

In addition to meeting the requirements of the University and of the College of Agriculture and Natural Resources, students must meet the requirements specified below.

Admission

A student seeking admission to the Plant Breeding and Genetics program at the doctoral level must have completed a Bachelor or Master of Science degree in the plant sciences with an emphasis on plant breeding and genetics. A minimum grade–point average of 3.00 is required.

To be considered for admission to the program, the student must be nominated as an advisee by a faculty member in the student’s major department who is also a member of the Plant Breeding and Genetics faculty. Admission to the program is by approval of one of the four participating departments, the Plant Breeding and Genetics faculty, and the Coordinator of the Plant Breeding and Genetics Program.

Requirements for the Doctor of Philosophy Degree

The guidance committee, selected in consultation with the student and the major professor at the time that the student is admitted to the program, plans the student’s course of study with the student’s particular interests, capabilities, and professional goals in mind. The student’s guidance committee is composed of four faculty members; the student’s major professor and at least one other person must be members of the Plant Breeding and Genetics faculty. At least one member must be from a department other than the one that administers the student’s major.

The student is required to complete courses, learn research methodologies, and conduct dissertation research pertinent to the plant species under study. The student must complete at least 12 credits in 800–level plant breeding and genetics courses including four credits of Horticulture 892, and two core courses as specified by the Plant Breeding and Genetics faculty. One semester of teaching experience is also required.

The student’s program is subject to review by the Plant Breeding and Genetics faculty. The degree is conferred upon recommendation of the department, the Coordinator of the Plant Breeding and Genetics Program, and the Dean of the College.

GRADUATE SPECIALIZATION in ENVIRONMENTAL TOXICOLOGY

The College of Agriculture and Natural Resources, the College of Engineering, the College of Natural Science, and the College of Veterinary Medicine administer the Graduate Specialization in Environmental Toxicology. The College of Agriculture and Natural Resources is the primary administrative unit.

The specialization is available as an elective to students who are enrolled in master’s degree programs in the departments of Animal Science, Civil and Environmental Engineering, Community Agriculture, Recreation and Resource Studies, Crop and Soil Sciences, Entomology, Fisheries and Wildlife, Food Science and Human Nutrition, Geological Sciences, Pathobiology and Diagnostic Investigation, and Zoology. The specialization is designed for students who are interested in combining study in their disciplines with study in environmental toxicology, and in applying their knowledge to solve environmental problems.

A faculty member who is in the department that administers the student’s degree program and who is associated with the Specialization in Environmental Toxicology will serve as the student’s academic adviser for the specialization. The academic adviser will assist the student in planning a program of study that is related to the student’s interests, capabilities, and professional goals. With the approval of the department and college that administers the student’s degree program, the courses that are used to satisfy the requirements for the specialization may also be used to satisfy the requirements for the master’s degree.

Requirements for the Graduate Specialization in Environmental Toxicology

The student’s program of study must be approved by the student’s academic adviser for the specialization. The student must meet the requirements specified below:

1. Have a grade–point average of at least 3.00 in the courses that are used to satisfy the requirements for the specialization.
2. Complete the following course (3 credits):
   - RD 836 Legal Aspects of Environmental Regulation
3. Complete one of the following courses (3 credits):
   - ANS 827 Integrated Risk Assessment of Environmental Hazards
4. Complete one of the following courses (3 credits):
   - PHM 450 Introduction to Chemical Toxicology
5. Complete one course from any of the five categories listed below (1 to 4 credits):
   - Environmental Dynamics
     - CE 481 Environmental Engineering Chemistry
     - CE 821 Groundwater Hydraulics
   - Environmental Chemistry
     - CSS 455 Pollutants in the Soil Environment
     - CSS 855 Interfacial Environmental Chemistry
   - Environmental Systems
     - ENE 801 Dynamics of Environmental Systems
     - GLG 421 Environmental Geochemistry
     - GLG 821 Aquous Geochemistry
   - Microbial Ecology
     - MMG 425 Microbial Ecology
     - MMG 841 Soil Microbiology
   - Aquatic Systems
     - ZOL 878 Dynamics of Trace Contaminants in Aquatic Systems
   - Aquatic Systems
     - ZOL 897 Ecosystem Ecology
   - Economics, Policy, and Law
     - AEC 810 Institutional and Behavioral Economics
     - AEC 829 The Economics of Environmental Resources

CREDITS

116
GRADUATE SPECIALIZATION IN FISH AND WILDLIFE DISEASE ECOLOGY AND CONSERVATION MEDICINE

The specialization is designed to provide students with improved understanding of the likely consequences of increased contact between fish and wildlife, domestic animals and human populations for emergence and spread of infectious diseases. Students will gain a sound understanding of the basis of fish and wildlife disease, and an appreciation of the diagnostic and survival tools needed to move toward effective disease control among wild populations and ecosystems. Students will also obtain the skills that will enable them to work effectively within interdisciplinary and interagency teams to develop disease surveillance, control, and prevention plans.

The specialization, which is administered by the Department of Fisheries and Wildlife and the College of Agriculture and Natural Resources, is available as an elective to master’s and doctoral students in the College of Agriculture and Natural Resources, the College of Natural Science, and the College of Veterinary Medicine. Students enrolled in Plan A (thesis) master’s programs are encouraged to develop thesis topics which integrate their chosen discipline with the interdisciplinary focus integral to this specialization. It is designed for students who are interested in combining study in their disciplines with the study of fish and wildlife disease ecology and in applying their knowledge to the management of emerging and resurfacing disease in fish and wildlife populations and in ecosystems.

With the approval of the department or school and college that administers the student’s degree program, courses that are used to satisfy the requirements for the specialization may also be used to satisfy the requirements for the graduate degree program. The student’s program of study must be approved by the student’s academic adviser for the specialization.

Requirements for the specialization in Fish and Wildlife Disease Ecology and Conservation Medicine

The student must:

1. Complete two 1-credit enrollments in the following course:
   - FW 893 Seminar in Fisheries and Wildlife

2. Complete the following capstone course:
   - FW 423L Principles of Fish and Wildlife Disease Laboratory

3. Complete one course from each of the following topic areas:
   - Pathology and Disease: FW 423 Principles of Fish and Wildlife Disease, FW 822 Aquatic Animal Medicine
   - Epidemiology and Quantitative Methods: EPI 810 Introduction to Descriptive and Analytical Epidemiology, FW 824 Analysis of Wildlife Populations
   - Policy and Management: FW 434 Human Dimensions of Fisheries and Wildlife Management, FW 811 Fisheries and Wildlife Laws and Regulations, FW 884 Outreach in Fisheries, Wildlife and Natural Resource Management

4. Master’s students will complete a thesis reflecting the integration of the student’s discipline.

Upon completion of the requirements of the degree and the requirements for the specialization, the student shall contact the Chairperson of the Department that administers the student’s degree program and request certification for the completion of the specialization. After the certification is approved by the Chairperson of the Department and the Dean of the College of Agriculture and Natural Resources, the Office of the Registrar will enter on the student’s academic record the name of the specialization and the date that it was completed. This certification will appear on the student’s transcript.

GRADUATE SPECIALIZATION IN GENDER, JUSTICE, AND ENVIRONMENTAL CHANGE

The Graduate Specialization in Gender, Justice, and Environmental Change is administered by the College of Agriculture and Natural Resources and the College of Social Science. The primary administrative unit for this specialization is the College of Agriculture and Natural Resources.

The Graduate Specialization in Gender, Justice, and Environmental Change is available as an elective for students who are enrolled in master’s and doctoral programs at Michigan State University. The goal of this program is to provide graduate students from different academic backgrounds with analytical and methodological tools to address environmental issues from the perspectives of gender relations and social justice. Students will be encouraged to develop an understanding of global perspectives on environmental issues in view of local-global linkages. The program will prepare students to foster the growth of research, service, and interdisciplinary collaboration in the fields of gender and environmental studies and to increase knowledge of the relationships between gender and domestic and international environmental issues.

Persons who are interested in the specialization must contact the adviser for the Graduate Specialization in Gender, Justice, and Environmental Change in the College of Agriculture and Natural Resources. To be admitted to the specialization, a stu-
dent must have been admitted to a graduate program at Michigan State University.

With the approval of the department and college that administer the student's degree program, courses that are used to satisfy the requirements for the specialization may also be used to satisfy the requirements for a master's or doctoral degree.

Requirements for the Specialization in Gender, Justice, and Environmental Change

The student must complete a total of 12 credits:

1. Both of the following courses:
   - ANP 859 Gender, Justice, and Environmental Change: Methods and Application ........................................ 3
   - FW 858 Gender, Justice, and Environmental Change: Issues and Concepts ............................................... 3
2. Two courses relevant to gender, justice and environmental change.

These courses will be selected, with adviser approval, after consideration of a recommended list of courses, furnished by the adviser, from such fields as agricultural economics, anthropology, forestry, fisheries and wildlife, political science, resource development, sociology, social work, and women's studies.

a. Policy course ........................................................................ 3
b. Elective course ....................................................................... 3

Upon completion of the requirements for the Graduate Specialization in Gender, Justice, and Environmental Change, the student should contact the Dean of the College of Agriculture and Natural Resources and request certification for the completion of the specialization. After the certification is approved by the Dean of the College of Agriculture and Natural Resources, the Office of the Registrar will enter on the student's academic record the name of the specialization and the date it was completed. This certification will appear on the student's transcript.

INTERDEPARTMENTAL GRADUATE SPECIALIZATIONS in ENVIRONMENTAL AND RESOURCE ECONOMICS

The interdepartmental graduate specialization in environmental and resource economics is an elective for students in all graduate majors. The specialization is designed to:

1. provide an opportunity for graduate students to obtain advanced training in the field of environmental and natural resource economics.
2. develop an intellectual environment, which will foster the growth of research and public service in the area of environmental and natural resource economics.
3. foster an understanding among graduate students of the career opportunities and professional responsibilities in the fields of environmental and natural resource economics.
4. increase public awareness of environmental and natural resource problems and alternative solutions.

Students who elect this graduate specialization seek a high degree of proficiency in the economic analysis of environmental and natural resource problems. The specialization is suitable for graduate students who intend to specialize in this area of economic analysis, as well as for those who may have a departmental major in a non-economic aspect of the environment and natural resources, but who want to deepen their understanding of how economics influences their major area of study.

The College of Agriculture and Natural Resources and the College of Social Science jointly administer the specialization. The College of Agriculture and Natural Resources is the primary administrative unit. The faculty who participate in this specialization are drawn from the departments of Agricultural Economics; Community, Agriculture, Recreation and Resource Studies, Economics; Fisheries and Wildlife; and Forestry.

Core faculty are selected by the chairpersons of the six participating departments. Each department designates one core faculty member to serve on a Coordinating Committee for the Specialization in Environmental and Resource Economics. The Coordinating Committee oversees the policies and program requirements adopted by the core faculty. Faculty members who comprise the core faculty may change with the mutual consent of the chairpersons of the departments, upon recommendation of the Coordinating Committee.

Requirements for the Specializations in Environmental and Resource Economics

Master's Students: The specialization consists of the completion of approximately 18 credits of resource economics and methods courses specified by the coordinating committee and approved by the core faculty. Credits in courses taken to meet the requirements of the specialization may be counted toward the requirements for the student's major at the discretion of the major department. At least one core faculty member serves on the student's guidance committee.

Doctoral Students: The specialization consists of the completion of approximately 24 credits of resource economics and methods courses, and passing a written examination. Course work is specified by the coordinating committee and approved by the core faculty. The examination committee consists of three core faculty members selected by the Coordinating Committee. Credits in courses taken to meet the requirements of the specialization may be used for a student's major at the discretion of the student's major department. At least one core faculty member serves on the student's guidance committee.

Upon completion of the requirements for the degree program and the Interdepartmental Graduate Specialization in Environmental and Resource Economics, the student should contact the chairperson of the student's major department and request certification for the completion of the specialization. After the certification is approved by the chairperson of the department and the Dean of the College of Agriculture and Natural Resources, the Office of the Registrar will enter on the student's academic record the name of the specialization and the date that it was completed. This certification will appear on the student's transcript.

AGRICULTURE and NATURAL RESOURCES NO–PREFERENCE UNDERGRADUATE PROGRAM

An Agriculture and Natural Resources no-preference program is offered for students selecting the College of Agriculture and Natural Resources but desiring to delay their choice of a specific field until a later date. The program is basic to all majors offered by the College of Agriculture and Natural Resources and permits the student flexibility with respect to major choice. Students may remain in this no-preference program until they attain junior standing, or they may select major preferences at any time prior to becoming juniors.
### AGRIBUSINESS MANAGEMENT

The agribusiness management major is designed to meet the needs of students who are interested in careers with agricultural input supply, agricultural production, commodity assembly and processing, and agricultural marketing organizations. The program, which focuses on the managerial functions performed by organizations throughout the agribusiness sector, provides a system-wide perspective of managerial problems confronting such organizations. Faculty who are associated with the program maintain close relationships with agribusiness companies. Those relationships benefit students who seek information about careers, scholarships, and employment in the field.

### Requirements for the Bachelor of Science Degree in Agribusiness Management

1. The University requirements for bachelor’s degrees as described in the Undergraduate Education section of this catalog; 120 credits, including general elective credits, are required for the Bachelor of Science degree in Agribusiness Management.

2. The requirements of the College of Agriculture and Natural Resources for the Bachelor of Science degree.

3. The following requirements for the major:

Students who pass a waiver examination will not be required to complete Computer Science and Engineering 101.

### AGRICULTURE AND NATURAL RESOURCES

#### Department of Agricultural Economics

**Steven D. Hanson, Chairperson**

### UNDERGRADUATE PROGRAMS

The department offers three undergraduate majors: agribusiness management, environmental economics and policy, and food industry management. These majors emphasize the application of business and social sciences to the management of public and private sector organizations. Each major is built on a liberal education base with a core of professional courses and sufficient electives for students and their advisers to tailor individualized programs.

### AGRIBUSINESS MANAGEMENT

The agribusiness management major is designed to meet the needs of students who seek information about careers with agribusiness companies and trade associations, bring practical applications and examples to the classroom and provide current information about companies and trade associations. Faculty who are associated with the program maintain close relationships with food companies and trade associations, bringing practical applications and examples to the classroom and providing current information about career and scholarship opportunities.

### FOOD INDUSTRY MANAGEMENT

The food industry management major is designed to meet the needs of students who are interested in careers in the food industry. Graduates of this major enter managerial positions with food wholesalers-distributors and retailers as well as sales, account management, and production supervision positions with food manufacturers. The program provides a system-wide perspective of managerial problems confronting firms in the food industry, recognizing the increasing interdependence among such firms and focuses on creating consumer value. Faculty who are associated with the program maintain close relationships with food companies and trade associations, bringing practical applications and examples to the classroom and providing current information about career and scholarship opportunities.

### Requirements for the Bachelor of Science Degree in Food Industry Management

1. The University requirements for bachelor’s degrees as described in the Undergraduate Education section of this catalog; 120 credits, including general elective credits, are required for the Bachelor of Science degree in Food Industry Management.

2. The University’s Tier II Writing Requirement for the Food Industry Management major is met by completing Food Industry Management 439. That course is referenced in item 3. a. below.

3. The following requirements for the major:

ENVIRONMENTAL ECONOMICS AND POLICY

Environmental Economics and Policy prepares students for careers that require balancing environmental sustainability and economic development. The major develops economic analysis skills and basic environmental science knowledge and applies these skills and knowledge to analyze the role of environmental considerations in economic decisions of governments, firms and households. The major prepares students for employment opportunities with state, federal and international government agencies, environmental interest groups, environmental consulting firms, and industry. The major also offers students the opportunity to prepare for graduate study in environmental economics or environmental policy studies programs.

Requirements for the Bachelor of Science Degree in Environmental Economics and Policy

1. The University requirements for bachelor’s degrees as described in the Undergraduate Education section of this catalog; 120 credits, including general elective credits, are required for the Bachelor of Science degree in Environmental Economics and Policy.

2. The University’s Tier II writing requirement for the Environmental Economics and Policy major is met by completing Environmental Economics and Policy 404. That course is referenced in item 3. a. below.

3. The completion of the College of Agriculture and Natural Resources mathematics requirement may also satisfy the University mathematics requirement.

4. The requirements of the College of Agriculture and Natural Resources for the Bachelor of Science degree:
   a. Certain courses referenced in requirement 3. b. below may be counted toward College requirements as appropriate.
   b. The following requirements for the major:

      a. All of the following courses: ..................................... 45
ACC 230 Survey of Accounting Concepts .................................. 3
CSE 101 Computing Concepts and Computer System .................... 3
EC 201 Introduction to Microeconomics ................................... 3
EC 202 Introduction to Macroeconomics .................................. 3
EPP 201 Commodity Economics ............................................ 3
EPP 255 Ecological Economics ............................................ 3
EPP 260 World Food, Population and Poverty ............................ 3
EPP 301 Environmental Economics ....................................... 3
EPP 404 Public Sector Budgeting and Program Evaluation (W) ....... 3
EPP 405 Corporate Environmental Management .......................... 3
GEO 221 Introduction to Geographic Information ....................... 3
RD 430 Law and Resources .................................................. 3
RD 440 Environmental Policy Making in Michigan ....................... 3

b. One of the following courses: .......................................... 3 or 4
EC 335 Taxes, Government Spending and Public Policy .................. 3
EC 435 Public Expenditures ................................................ 3
C. One of the following courses: .......................................... 3 or 4
FW 203 Resource Ecology .................................................. 3
GLG 201 The Dynamic Earth .............................................. 4
ISB 202 Applications of Environmental and Organismal Biology ....... 3
d. One of the following courses: .......................................... 3 or 4
STT 200 Statistical Methods ................................................ 3
STT 201 Statistical Methods ................................................ 4
STT 315 Introduction to Probability and Statistics for Business ....... 3
f. Professional electives: At least 12 credits in applied policy courses approved in writing by the student’s academic adviser.

SPECIALIZATION IN AGRIBUSINESS MANAGEMENT

The Specialization in Agribusiness Management is designed to serve students with majors in other fields who are interested in careers in agribusiness. The primary educational objective of the specialization is to provide students with a fundamental knowledge of business management in relation to agribusiness firms.

The specialization is available as an elective to all students who are enrolled in bachelor’s degree programs at Michigan State University other than the Bachelor of Science degree program with a major in agribusiness management. The specialization is administered by the Department of Agricultural Economics.

With the approval of the department and college that administers the student’s degree program, the courses that are used to satisfy the requirements for the specialization may also be used to satisfy the requirements for the bachelor’s degree.

Requirements for the Specialization in Agribusiness Management

The student must complete:

1. One of the following courses: ............................................. 3
   a. ABM 100 Decision-making in the Agri-Food System ............... 3
   b. ABM 130 Farm Management ........................................... 3
2. One of the following courses: ............................................. 3
   a. ABM 225 Commodity Marketing I ....................................... 3
   b. ABM 332 Agribusiness Operations Management .................... 3
   c. ABM 430 Farm Management II ......................................... 3
3. Two of the following courses including at least one course at the 300 or 400 level. Courses not used to satisfy requirements 1. and 2. may be used to substitute for courses listed in requirement 3. ........ 6
   a. ABM 222 Agribusiness and Food Industry Sales (W) ............... 3
   b. ABM 337 Labor and Personnel Management in the Agri-Food System . 3
   c. ABM 400 Public Policy Issues in the Agri-Food System ............ 3
   d. ABM 422 Vertical Coordination in the Agri-Food System ........... 3
   e. ABM 425 Commodity Marketing II ...................................... 3
   f. ABM 427 Global Agri-Food Industries and Markets .................. 3
   g. ABM 435 Financial Management in the Agri-Food System ........... 3
   h. ABM 437 Agribusiness Strategic Management (W) ................. 3
4. One of the following courses: ............................................. 3
   a. ACC 201 Principles of Financial Accounting .......................... 3
   b. ACC 230 Survey of Accounting Concepts .............................. 3
5. One of the following courses: ............................................. 3
   a. GLB 323 Introduction to Business Law ................................ 3
   b. MGT 325 Management Skills and Processes ............................ 3
   c. MSC 327 Introduction to Markets and Management Entrepreneurship .... 3

Upon completion of the requirements for the Specialization in Agribusiness Management, the student should contact the Chairperson of the Department of Agricultural Economics and request certification for the completion of the specialization. After the certification is approved by the Chairperson of the Department of Agricultural Economics and the Director of Academic Affairs of the College of Agriculture and Natural Resources, the Office of the Registrar will enter on the student’s academic record the name of the specialization and the date that it was completed. This certification will appear on the student’s transcript.
SPECIALIZATION IN ENVIRONMENTAL ECONOMICS

The Specialization in Environmental Economics is designed to serve students who are interested in the application of economics to environmental issues. The educational objectives of the specialization are to:
1. Introduce students to the concepts and principles of environmental economics.
2. Help students to develop the skills necessary to analyze environmental and natural resource issues.
3. Help students to understand the economic dimensions of many environmental issues facing society.

The specialization is available as an elective to all students who are enrolled in bachelor's degree programs at Michigan State University. The specialization is administered by the Department of Agricultural Economics.

With the approval of the department and college that administer the student's degree program, the courses that are used to satisfy the requirements for the specialization may also be used to satisfy the requirements for the bachelor's degree.

Requirements for the Specialization in Environmental Economics

The student must complete:

1. One of the following courses: ........................................... 3 or 4
   EC 201 Introduction to Microeconomics
   EC 202 Introduction to Macroeconomics
   EC 251H Microeconomics and Public Policy
   EC 252H Macroeconomics and Public Policy

2. All of the following courses: ........................................... 9
   EEP 255 Ecological Economics
   EEP 320 Environmental Economics
   RD 460 Natural Resource Economics

3. One additional course related to environmental policy issues and approved by the academic adviser for environmental economics in the Department of Agricultural Economics.

Upon completion of the requirements for the Specialization in Environmental Economics, the student should contact the Chairperson of the Department of Agricultural Economics and request certification for the completion of the specialization. After the certification is approved by the Chairperson of the Department of Agricultural Economics and the Director of Academic Affairs of the College of Agriculture and Natural Resources, the Office of the Registrar will enter on the student's academic record the name of the specialization and the date that it was completed. This certification will appear on the student's transcript.

SPECIALIZATION IN FOOD INDUSTRY MANAGEMENT

The Specialization in Food Industry management is designed to serve students with majors in other fields who are interested in careers in the food industry. The primary educational objective of the specialization is to provide students with a fundamental knowledge of business management in relation to the food industry.

The specialization is available as an elective to students who are enrolled in bachelor's degree programs at Michigan State University other than the Bachelor of Science degree program with a major in food industry management. The specialization is administered by the Department of Agricultural Economics.

With the approval of the department and college that administer the student's degree program, the courses that are used to satisfy the requirements for the specialization may also be used to satisfy the requirements for the bachelor's degree.

Requirements for the Specialization in Food Industry Management

The student must complete:

1. All of the following courses: ........................................... 6
   ABM 100 Decision-making in the Agri-Food System
   FIM 220 Food Product Marketing

2. Two of the following courses: ........................................... 6
   ABM 222 Agribusiness and Food Industry Sales
   ABM 337 Labor and Personnel Management in the Agri-Food System
   ABM 400 Public Policy Issues in the Agri-Food System
   ABM 422 Vertical Coordination in the Agri-Food System
   ABM 427 Global Agri-Food Industries and Markets
   ABM 435 Financial Management in the Agri-Food System
   EEP 405 Corporate Environmental Management
   FIM 439 Food Business Analysis and Strategic Planning (W)
   MSC 351 Retail Management

3. One of the following courses: ........................................... 3
   ACC 201 Principles of Financial Accounting
   ACC 230 Survey of Accounting Concepts

4. One of the following courses: ........................................... 3
   FIM 335 Food Marketing Management
   FIM 439 Food Business Analysis and Strategic Planning (W)
   GBL 323 Introduction to Business Law
   MGT 325 Management Skills and Processes
   MGT 327 Introduction to Marketing

Upon completion of the requirements for the Specialization in Food Industry Management, the student should contact the Chairperson of the Department of Agricultural Economics and request certification for the completion of the specialization. After the certification is approved by the Chairperson of the Department of Agricultural Economics and the Director of Academic Affairs of the College of Agriculture and Natural Resources, the Office of the Registrar will enter on the student's academic record the name of the specialization and the date that it was completed. This certification will appear on the student's transcript.

GRADUATE STUDY

The Department of Agricultural Economics offers Master of Science and Doctor of Philosophy degree programs in agricultural economics.

AGRICULTURAL ECONOMICS

Graduate programs in agricultural economics provide for coordinated study in several areas. The courses and programs are designed to help students become thoroughly grounded in the concepts and tools of economics and related fields and to enable them to solve practical problems. The department offers the following five fields of study: agribusiness, strategy and management, agricultural markets and price analysis, environmental and resource economics, finance and production economics, and international agricultural development.

Students who are enrolled in Master of Science degree programs in the Department of Agricultural Economics may elect a Specialization in Food Safety. For additional information, refer to the statement on the specialization in the College of Veterinary Medicine section of this catalog.

Graduate students who are enrolled in the Department of Agricultural Economics may also elect specializations in resource economics (M.S. and Ph.D.) and agribusiness (M.S.). For additional information, refer to the statement on Interdepartmental Graduate Specializations in Resource Economics, and on the Master's Specialization in Agribusiness.

Courses in agricultural economics, mathematics, statistics, and related areas are available for those students who wish to begin or continue their graduate work during the summer months.

Admission
Many undergraduate programs provide background for graduate study in agricultural economics. However, a student with inadequate background in areas deemed important to the program of study may be required to complete collateral courses in addition to the minimum credit requirements for the degree and may be admitted on a provisional status until some deficiencies are remedied. All applicants for admission to graduate degree programs in agricultural economics are required to submit scores for the General Test of the Graduate Record Examination. Applicants may apply directly for the Ph.D. program only if they have completed a master’s degree by the time of enrollment.

Master of Science
The master’s programs in agricultural economics may be designed to serve either as final preparation for professional employment or as the foundation for a doctoral program. In addition to meeting the requirements of the University and of the College of Agriculture and Natural Resources, students must meet the requirements specified below.

Requirements for the Master of Science Degree in Agricultural Economics
The student may elect either Plan A (with thesis) or Plan B (non-thesis research paper). The student’s plan of study should be approved by the department prior to the beginning of the second semester of enrollment in the program.

A total of 30 credits is required for the degree under Plan A, and a total of 33 credits is required for the degree under Plan B.

Requirements for Both Plan A and Plan B:
1. A grade-point average of at least 3.00 for all courses counting toward the master’s degree, and in each course used to satisfy the mathematics, statistics, and quantitative methods requirements.
2. A minimum of 12 credits in courses in agricultural economics, with at least 9 credits at the 800-900 level.
3. A minimum of 3 credits in courses that the department has identified as containing primarily economic theory.
4. A minimum of 9 credits in courses in quantitative analysis, including 3 credits of mathematics for economists (equivalent to EC 801) and one elective 3 credit quantitative methods course. Alternatively, students may replace EC 801 by 1 credit of mathematics for economists (equivalent to AEC 800A) and a second 3 credit elective quantitative methods course for a total of 10 credits in quantitative analysis.

Additional Requirements for Plan A:
1. Six credits of master’s thesis research.

Additional Requirements for Plan B:
1. A research paper or papers representing not fewer than 3 nor more than 4 credits.
2. Six credits in courses in a minor field, either within or outside the department.

Doctor of Philosophy
In addition to meeting the requirements of the University and of the College of Agriculture and Natural Resources, students must meet the requirements specified below.

Requirements for the Doctor of Philosophy Degree in Agricultural Economics
The student must:
1. Acquire (a) competence in economics by completing 9 credits of Ph.D. level courses in economic theory and (b) 9 credits in a major field in one of the five fields within agricultural economics referenced above.
2. Pass written comprehensive examinations in economics no later than the end of the second academic year and in the student’s chosen major field by the end of the third academic year.
3. Complete (a) 6 credits in a minor field in agricultural economics outside the major field, and (b) 6 credits in a second minor field that may be outside the Department of Agricultural Economics.
4. Acquire competence in quantitative methods by taking specified courses in mathematics for economists (3 credits), probability and statistics (3 credits), econometrics (3 credits) and one other quantitative methods course (3 credits). A grade of 3.0 must be achieved in each course.
5. Complete one graduate course (3 credits) in research methodology.
6. Complete 24 credits of dissertation research, present and obtain formal approval for the proposed dissertation research, present the results of the research at the outset of the final oral examination, and prepare a research paper suitable for submission to a professional journal.

The student’s dissertation research forms a part of the department’s research program and contributes to it. Dissertation research may be conducted overseas in conjunction with University projects or with the support of other research grants. A detailed description of master’s and doctoral program requirements and a timetable for completing them are included in the Graduate Education Policies document of the Department of Agricultural Economics.

MASTER’S SPECIALIZATION IN AGRIBUSINESS
The Master’s specialization in Agribusiness is designed to serve students who are interested in careers in agribusiness. The specialization is available as an elective to students who are enrolled in master’s degree programs in the College of Agriculture and Natural Resources, The Eli Broad Graduate School of Management, and the College of Veterinary Medicine. The specialization is administered by the Department of Agricultural Economics.

The student’s program of study for the specialization must be approved by the academic adviser for agribusiness. Through the selection of courses, the specialization complements the student’s master’s degree program. Students in agriculturally related disciplines complete courses in business management, marketing, finance, and human resource management as applied to agribusiness firms. Students in business management fields complete courses in agribusiness.

With the approval of the department and college that administers the student’s degree program, the courses that are used to satisfy the requirements for the specialization may also be used to satisfy the requirements for the master’s degree.

Requirements for the Master’s Specialization in Agribusiness
The student must complete:
1. One of the following courses: ........................................... 3
   AEC 800 Foundations of Agricultural Economics
   EC 805 Microeconomic Analysis
   Requirement 1. will be waived for students who have completed an intermediate-level course in microeconomics.
   CREDITS
2. Two of the following courses: ........................................... 6
   .................................
The undergraduate program in animal science, which leads to the Bachelor of Science degree, is designed to prepare students for a variety of careers by establishing a strong basic science foundation combined with practical experience with agricultural animals at the multiple farm facilities located near campus. Graduates may be employed in marketing, agribusiness, finance, manufacturing, public relations, as extension specialists, as pharmaceutical salespersons, or as advisers on farm management. Graduates often attend veterinary or graduate school.

Scientific principles of biology and animal science are important components of the program and are combined with opportunities to apply fundamental principles learned in class to farm management. The animal science major also provides students with flexibility. Academic advisers guide students in the development of a planned program of study that is consistent with their interests and goals.

All students in animal science must complete a set of required core courses including breeding and genetics, nutrition, physiology, and management. These principles are taught using horses, dairy cattle, beef cattle, swine, poultry, sheep and companion animals. Students may choose to complete the agribusiness management, pre-veterinary, production medicine, or science concentration.

The agribusiness management concentration is designed to prepare students for careers in managing livestock operations. Marketing, sales, and production of livestock and livestock products offer numerous employment opportunities. The pre-veterinary concentration is designed for students who are interested in careers in veterinary medicine. The requirements for admission to the College of Veterinary Medicine are included in the requirements for this concentration.

The production medicine scholars concentration is designed to prepare students for a career in herd-based agricultural veterinary practice. Students interested in the professional program in the College of Veterinary Medicine may apply through a special admissions process. Acceptance in the production medicine scholars concentration does not assure acceptance into the College of Veterinary Medicine. See the College of Veterinary Medicine section of this catalog for further information about the admissions pathway for production medicine scholars.

The science concentration is designed to prepare students for graduate study and careers in research and animal product development. This concentration includes additional science courses.

Students who are enrolled in the Bachelor of Science degree program with a major in animal science may elect a Specialization in Agricultural and Natural Resources Biotechnology. For additional information, refer to the Specialization in Agricultural and Natural Resources Biotechnology statement.

Requirements for the Bachelor of Science Degree in Animal Science

1. The University requirements for bachelor's degrees as described in the Undergraduate Education section of this catalog; 120 credits, including general elective credits, are required for the Bachelor of Science degree in Animal Science.

The University’s Tier II writing requirement for the Animal Science major is met by completing all of the following courses: Animal Science 313, 314, 315. Those courses are referenced in item 3. a. below.

Students who are enrolled in the Animal Science major leading to the Bachelor of Science degree in the Department of Animal Science may complete an alternative track to integrative studies in Biological and Physical Sciences that consists of the following courses: Biological Science 111 and 111L, Chemistry 141, and Chemistry 143 or 251. The completion of Biological Science 111L satisfies the laboratory requirement. Biological Science 111 and 111L, Chemistry 141, and Chemistry 143 or 251 may be counted toward both the alternative track and the requirements for the major referenced in item 3. below.

The completion of the College of Agriculture and Natural Resources mathematics requirement may also satisfy the University mathematics requirement.

2. The requirements of the College of Agriculture and Natural Resources for the Bachelor of Science degree.

Certain courses referenced in requirement 3. below may be counted toward College requirements as appropriate.

3. The following requirements for the major:

a. All of the following courses: .............................. 30

AGRUCULTURE AND NATURAL RESOURCES
Department of Animal Science

Department of Animal Science
AGRICULTURE AND NA TURAL RESOURCES

124

One of the following concentrations: 24 to 33

(1) The requirements for the Specialization in Agribusiness Management as specified in the Specialization in Agribusiness Management statement in the Department of Agricultural Economics statement (18 credits).

(2) The following course (3 credits):

EC 201 Introduction to Microeconomics

(3) One of the following courses (3 credits):

ANS 422 Advanced Beef Cattle Feedlot Management

ANS 432 Advanced Dairy Cattle Management

ANS 442 Advanced Horse Management

ANS 472 Advanced Swine Management

Preventive Medicine (33 credits):

(1) All of the following courses (27 credits):

BMB 401 Basic Biochemistry 

BS 110 Organisms and Populations

CEM 161 Chemistry Laboratory I

CEM 252 Organic Chemistry II

CEM 295 Organic Chemistry Laboratory

MTH 116 College Algebra and Trigonometry

PHY 231 Introductory Physics I

PHY 232 Introductory Physics II

PHY 251 Introductory Physics Laboratory I

PHY 252 Introductory Physics Laboratory II

(2) At least 6 credits from the following Animal Science courses:

ANS 320 Muscle Foods

ANS 404 Advanced Genetics of Farm Animals

ANS 407 Food and Animal Toxicology

ANS 413 Monogastric Animal Nutrition

ANS 414 Advanced Animal Breeding

ANS 415 Growth and Musculoskeletal Biology

ANS 416 Meat Science and Muscle Biology

ANS 417 Topics in Toxicology

ANS 422 Advanced Beef Cattle Feedlot Management

ANS 425 Principles of Animal Biotechnology

ANS 427 Environmental Toxicology and Society

ANS 432 Advanced Dairy Cattle Management

ANS 434 Advanced Horse Management

ANS 445 Equine Exercise Physiology

ANS 455 Avian Physiology

ANS 461 Advanced Swine Management

ANS 483 Ruminant Nutrition

Production Medicine Scholars (28 to 33 credits):

(1) Both of the following courses (9 credits):

ANS 490 Independent Study

CSE 101 Computing Concepts and Competencies

(2) Two of the following courses (6 credits):

ANS 222 Introductory Beef Cattle Management

ANS 232 Introductory Dairy Cattle Management

ANS 262 Introductory Sheep Management

ANS 282 Introductory Swine Management

Courses used to fulfill this requirement may also be used to fulfill requirement 3.c.

(3) Two of the following courses (6 or 7 credits):

ABM 435 Financial Management in the Agri-Food System

ABM 437 Agribusiness Strategic Management (W)

ANS 413 Monogastric Animal Nutrition

ANS 483 Ruminant Nutrition

(4) One of the following courses (3 or 4 credits):

ANS 305 Applied Animal Behavior

ANS 415 Growth and Musculoskeletal Biology

ANS 425 Principles of Animal Biotechnology

ANS 483 Ruminant Nutrition

(5) One of the following courses (3 credits):

ANS 422 Advanced Beef Cattle Feedlot Management

ANS 432 Advanced Dairy Cattle Management

ANS 472 Advanced Swine Management

(6) One of the following courses (2 to 4 credits):

ANS 404 Advanced Genetics of Farm Animals

ANS 407 Food and Animal Toxicology

ANS 414 Advanced Animal Breeding

ANS 416 Meat Science and Muscle Biology

ANS 464 Statistics for Biologists

STT 201 Statistical Methods

ZOL 313 Animal Behavior

ZOL 341 Fundamental Genetics

Science (24 credits):

(1) The following course (4 credits):

STT 201 Statistical Methods

(2) One of the following courses (4 credits):

BMB 401 Basic Biochemistry

BMB 402 Biochemistry

At least 16 credits from the following courses, including at least 6 credits in Animal Science courses:

ANS 305 Applied Animal Behavior

ANS 320 Muscle Foods

ANS 404 Advanced Genetics of Farm Animals

24 to 33

GRA DE STUDY

The graduate program in animal science is designed to provide students with opportunities to pursue a program that focuses on the basic biomedical and agricultural sciences or on applied management aspects of animal science.

The Department of Animal Science offers Master of Science and Doctoral of Philosophy degree programs in animal science and a Doctor of Philosophy degree program in animal science—environmental toxicology.

Students who are enrolled in Master of Science degree programs in the Department of Animal Science may elect a Specialization in Food Safety. For additional information, refer to the statement on the specialization in the College of Veterinary Medicine section of this catalog.

ANIMAL SCIENCE

Programs of study are based on the strengths of the department and the goals of individual students. Although individual students' programs vary, all graduate programs in animal science are designed to:

1. Provide a strong foundation in biological science and an in—depth knowledge of a specific biological discipline of importance to animal agriculture.

2. Develop creative potential and foster independent thought.

3. Improve technical skills.

4. Provide the foundation for effective, independent careers in extension, research, teaching, or agribusiness.

The department offers the following areas of specialization within the field of animal science: quantitative genetics, systems science, nutrition, physiology of growth, lactation and reproduction, microbiology, molecular biology, toxicology, and livestock and farm management. Research for theses or dissertations may focus on beef or dairy cattle, sheep, swine, horses, poultry, or fur—bearing and laboratory species. Modern animal, computer, and library facilities support research.

Students who are enrolled in the Master of Science degree program in the Department of Animal Science may elect a Specialization in Environmental Toxicology. For additional information, refer to the Graduate Specialization in Environmental Toxicology statement.

In addition to meeting the requirements of the University and of College of Agriculture and Natural Resources, the student must meet the requirements specified below.
Admission
To be admitted to the master’s or doctoral degree program in animal science, students must have a bachelor’s degree in animal science or in a related biological science. To enroll in advanced courses in animal science and supporting sciences, students should have completed courses that establish principles in animal science and in basic physical and biological sciences pertinent to the area of specialization within the field of animal science that the student chooses. In some cases, students may need to complete collateral courses in addition to the courses that are required for the graduate degree.

Requirements for the Master of Science Degree in Animal Science
The student may elect either Plan A (with thesis) or Plan B (without thesis). A total of 30 credits is required for the degree under either Plan A or Plan B. In cooperation with the student’s major professor, the student plans a program of study that includes courses related to one of the areas of specialization within the field of animal science referenced above, seminars, and teaching experience. The student’s major professor and guidance committee must approve the student’s program of study, including thesis research for students under Plan A.

Requirements for the Doctor of Philosophy Degree in Animal Science
In cooperation with the student’s major professor, the student plans a program of study that includes courses related to one of the areas of specialization within the field of animal science referenced above, seminars, and teaching experience. The student’s major professor and guidance committee must approve the student’s program of study, including dissertation research.

ANIMAL SCIENCE—ENVIRONMENTAL TOXICOLOGY

Doctor of Philosophy
For information about the Doctor of Philosophy degree program in animal science—environmental toxicology, refer to the statement on Multidepartmental Doctoral Programs in Environmental Toxicology in the Graduate Education section of this catalog.

DEPARTMENT of BIOSYSTEMS and AGRICULTURAL ENGINEERING
Ajit Srivastava, Chairperson
The Department of Biosystems and Agricultural Engineering is administered jointly by the College of Agriculture and Natural Resources and the College of Engineering.

UNDERGRADUATE PROGRAMS
The department offers a Bachelor of Science degree program with a major in technology systems management through the College of Agriculture and Natural Resources. That program is described below.

The department also offers a Bachelor of Science degree program with a major in biosystems engineering through the College of Engineering. For information about that program, refer to the statement on the Department of Biosystems and Agricultural Engineering in the College of Engineering section of this catalog.

TECHNOLOGY SYSTEMS MANAGEMENT

Bachelor of Science
The Technology Systems Management program is designed to meet the needs of students who aspire to apply new technology to solve problems in food, agricultural and biological systems. Prospective students should have an affinity for physical systems, computers, and technology, and they should be practical problem-solvers.

Students in the program acquire a strong technical background tempered by an overview of business and economics. They possess highly portable skills in technology transfer and technical problem-solving which are applicable to many related career paths.

Graduates find employment as agricultural and environmental research technicians, managers of processing and production facilities, technical sales representatives, and service and marketing managers for equipment manufacturers.

Requirements for the Bachelor of Science Degree in Technology Systems Management
1. The University requirements for bachelor’s degrees as described in the Undergraduate Education section of this catalog; 120 credits, including general elective credits, are required for the Bachelor of Science degree in Technology Systems Management.

The University’s Tier II writing requirement for the Technology Systems Management major is met by completing Technology Systems Management 481. That course is referenced in item 3. a. below.

Students who are enrolled in the Technology Systems Management major leading to the Bachelor of Science degree in the Department of Biosystems and Agricultural Engineering may complete an alternative track to Integrative Studies in Biological and Physical Sciences that consists of Chemistry 161, Physics 231 and 251, and one of the following courses: Biological Science 110 or 111; Entomology 205; Microbiology and Molecular Genetics 205; Physiology 250; or Plant Biology 105. The completion of Physics 251 or Biological Science 110 satisfies the laboratory requirement.

The completion of Mathematics 124 satisfies both the College of Agriculture and Natural Resources mathematics requirement and the University mathematics requirement.

2. The requirements of the College of Agriculture and Natural Resources for the Bachelor of Science degree. Certain courses referenced in requirement 3. below may be counted toward College requirements as appropriate.

3. The following requirements for the major:

   g. Cognate. The student must complete a minimum of 15 credits in an approved group of courses that includes courses in the College of Agriculture and Natural Resources. These courses must be chosen to form a career objective and be pre-approved by the student's academic adviser. .............................. 15

GRADUATE STUDY

The Department of Biosystems and Agricultural Engineering offers the programs listed below:

Master of Science

agricultural technology and systems management
biosystems engineering

Doctor of Philosophy

agricultural technology and systems management
biosystems engineering

Study for the department's master's and doctoral degree programs is administered by the College of Agriculture and Natural Resources. Descriptions of the degree programs, organized by fields of study in alphabetical order, are presented below.

Students who are enrolled in Master of Science degree programs in the Department of Biosystems and Agricultural Engineering may elect a Specialization in Food Safety. For additional information, refer to the statement on the specialization in the College of Veterinary Medicine section of this catalog.

AGRICULTURAL TECHNOLOGY AND SYSTEMS MANAGEMENT

Agricultural technology and systems management emphasizes the application of system science to the planning and management of technology for optimum agricultural production and processing and for the preservation and utilization of natural resources.

Master of Science

In addition to meeting the requirements of the University and of the College of Agriculture and Natural Resources, students must meet the requirements specified below.

Admission

For regular admission to the program, the student must have a Bachelor of Science degree in agricultural technology and systems management. The degree may have been earned through a college of agriculture and natural resources.

Provisional admission may be granted to an applicant who has a Bachelor of Science degree in a natural, biological, or physical science. Deficiencies must be removed by completing collateral courses.

Requirements for the Master of Science Degree in Agricultural Technology and Systems Management

The program is available only under Plan A (with thesis). A total of 30 credits is required for the degree. The student's program of study must be approved by the student's academic adviser and must include:

CREDITS

1. All of the following courses:
   - BE 820 Research Methods in Agricultural Engineering .......... 1
   - BE 892 Agricultural Engineering Seminar ............................ 1
   - ATM 640 Analysis of Physical Systems .............................. 3

   Two additional courses in the College of Agriculture and Natural Resources at the 400-level or above that are related to agricultural technology and systems management:

One statistics course at the 400 level or above.

Doctor of Philosophy

In addition to meeting the requirements of the University and of the College of Agriculture and Natural Resources, students must meet the requirements specified below.

Admission

To be considered for admission to the program, the applicant must have a Master of Science degree in agricultural technology and systems management or in a natural, biological, or physical science and should have a minimum of one year of calculus.

Requirements for the Doctor of Philosophy Degree in Agricultural Technology and Systems Management

The student must:

1. Complete a minimum of 30 credits in courses acceptable to the guidance committee, in addition to the credits earned in Agricultural Technology and Systems Management 999.
2. Complete at least one-half of the course credits to be counted toward the degree at Michigan State University.
3. Pass comprehensive examinations in the major field and in a secondary field.
4. Conduct original research upon a basic problem in the broad field of agricultural technology and systems management and prepare a dissertation of acceptable quality.

BIOSYSTEMS ENGINEERING

Biosystems engineers apply the basic sciences, mathematics, engineering sciences, and technology to design sustainable solutions to problems with a critical biological component. Biosystems engineers work to ensure an adequate and safe food supply while efficiently utilizing natural resources and protecting the environment. Specific application areas include food and biomass production systems, food processing systems, processing systems for utilization and conversion of biological products, water and waste management systems, natural resource and environmental protection, and a range of other biological challenges that require engineering expertise.

The department offers both Master of Science and Doctor of Philosophy degree programs with majors in biosystems engineering.

Master of Science

The Master of Science degree program in biosystems engineering is designed to prepare graduates for advanced career opportunities that require disciplinary expertise beyond that available in
the Bachelor of Science degree. The program is available under Plan A (thesis) and Plan B (without thesis). Plan A introduces the student to research methods, and the student is expected to execute, analyze, and publish an original research project under the guidance of an adviser. Plan B is suited for those who do not plan a research-related career, but desire additional skills and knowledge obtained through advanced course work.

In addition to meeting the requirements of the University and of the College of Agriculture and Natural Resources, students must meet the requirements specified below.

Admission
To be considered for admission to the Master of Science degree program in biosystems engineering, an applicant must take the Graduate Record Examination General Test and have the scores sent to the department.

Regular Status. Admission to the master's degree program in biosystems engineering with regular status may be granted by the department, subject to the availability of resources and to the approval of the dean, upon consideration of the likelihood that the applicant will be able to complete a master's degree program successfully. To be admitted to the master's program in biosystems engineering, an applicant must have:
1. A grade–point average not lower than 3.00 for the final two years of the undergraduate program, or standing in the upper quarter of the graduating class in the student's major.
2. A bachelor's degree, either:
   a. from an accredited program in engineering, or
   b. from a related science-oriented program in which the applicant has shown very high academic achievement, as certified by the department.

An applicant without an engineering degree must demonstrate the abilities and experience necessary to succeed in the core courses, Biosystems Engineering 815, 825, and 835. The student must complete, previously, or within the master's program, a significant engineering design experience.

Provisional Status. Admission to the master's degree program in biosystems engineering with provisional status may be granted by the department, subject to the approval of the dean:
1. To an applicant qualified for regular admission except that collateral courses are deemed necessary, or
2. To an applicant whose record is incomplete.

If collateral courses are required, the minimum acceptable grades and the semesters by which those courses must be completed will be specified on the admission form. Biosystems Engineering 490 and 890 may not be used to satisfy collateral course requirements.

The provisional status will be changed to regular status when the conditions specified on the admission form have been met, as certified by the department and approved by the dean.

Registration as a Professional Engineer
Students who wish to satisfy the requirements of the State Board of Registration for Professional Engineers should consult with the Department of Biosystems and Agricultural Engineering.

Program Filing
The student's program of study must be approved before the student completes 6 credits of graduate work in order for the student to continue to enroll in the master's degree program.

The subject matter and instructor must be specified for every independent study, special problems, or selected topics course that is included in the student's approved program of study.

Modification of Program
After the Plan A or Plan B option has been selected by the student and approved, the student may not pursue the other option without approval of the department.

The following changes are not permitted in a student's approved program of study:
1. Adding or deleting a course for which a grade has already been assigned under any of the three grading systems (numerical, Pass–No Grade, or Credit–No Credit).
2. Adding or deleting a course for which grading was postponed by the use of the DF–Deferred marker.
3. Adding or deleting a course which the student dropped after the middle of the semester and for which "W" or "N" or "0.0" was designated.
4. Adding or deleting a course during the final semester of enrollment in the master's degree program.

Requirements for the Master of Science Degree in Biosystems Engineering
The program is available under both Plan A (with thesis) and Plan B (without thesis). The student's program of study must be developed in consultation with the major professor, must be approved by the department, and must meet the requirements specified below:

Requirements for Both Plan A and Plan B:
The student must complete:
1. A total of 30 credits in 400–, 800–, and 900–level courses. Not more than 4 credits of Biosystems Engineering 890 may be counted toward the requirements for the degree under Plan A. Not more than 6 credits of Biosystems Engineering 890 may be counted toward the requirements for the degree under Plan B.
2. All of the following courses:
   - BE 815 Instrumentation for Biosystems Engineering ........................................... 3
   - BE 820 Research Methods in Biosystems Engineering ........................................... 1
   - BE 825 Properties and Characteristics of Biological Materials ............................... 3
   - BE 835 Engineering Analysis and Optimization of Biological Systems ...................... 3
   - BE 892 Biosystems Engineering Seminar .............................................................. 1

Additional Requirements for Plan A:
The student must:
1. Complete the following course:
   - BE 699 Master's Thesis Research ............................................................................. 6

Not more than 8 credits of Biosystems Engineering 899 may be counted toward the requirements for the degree under Plan A.
2. Pass a final oral examination over the written thesis administered by the department and conducted by three regular university members, at least two of which must be Biosystems Engineering faculty.
3. Provide to the major professor and to the department a hard–bound copy of the thesis made from the original unbound manuscript submitted to the Office of The Graduate School. Arrangement for delivery of the copies shall be made when the original manuscript is submitted to the Office of The Graduate School.

Additional Requirements for Plan B:
The student must:
- Pass the final examination administered by the department over the course work in the student's approved program of study. The examination may include both a written and an oral component. It is the student's responsibility to obtain detailed information about this examination from the department.

Academic Standards
1. Grades. The student must earn a grade of 2.0 or higher in each course in the approved program of study. The student must repeat any course in the approved program for which the grade earned was below 2.0.
2. Cumulative Grade–Point Average. The student must maintain a cumulative grade–point average of at least 3.00 in the courses in the approved program of study.
3. Probational Status. A student is placed on probational status if the student's cumulative grade–point average for the courses in the approved program of study is below 3.00. A student in probational status is not allowed to carry more
Retention In and Dismissal From the Program.

a. Cumulative Grade–Point Average. Should a student’s cumulative grade–point average fall below 3.00 after having completed 16 or more credits in courses in the approved program of study, the student may be enrolled in probationary status in the master’s degree program for one additional semester. If at the end of the additional semester the student’s cumulative grade–point average is 3.00 or higher, the student may continue to enroll in the master’s degree program. If at the end of the additional semester the student’s cumulative grade–point average is still below 3.00, the student will be dismissed from the program.

b. Academic Progress and Professional Potential. Each student’s academic progress and professional potential are evaluated by March 15 of each year. A student who in the judgment of the faculty is making satisfactory academic progress and has professional potential may continue to enroll in the master’s degree program. A student who in the judgment of the faculty is not making satisfactory academic progress or lacks professional potential will be dismissed from the program.

Transfer Credits

As a member of the Michigan Coalition for Engineering Education (MCEE), MSU will accept up to one less than half of the course credits required for the Master of Science degree program in Biosystems Engineering in transfer from other MCEE member institutions. Provided that (1) the student earned a grade of at least 3.0, or the equivalent, in the related courses; (2) the credits were not earned in research or thesis courses; and (3) the related courses are acceptable to the department.

For information about transfer credits from institutions that are not members of the MCEE, refer to the statement on MASTER’S PROGRAMS, Transfer Credits, in the Graduate Education section of this catalog.

Doctor of Philosophy

The Doctor of Philosophy degree in Biosystems Engineering is designed to prepare graduates for advanced careers that require demonstrated research skills and comprehensive knowledge of the discipline. The program is suitable only for those students who have shown outstanding ability and potential in the field, either by high quality work in a Master of Science degree or by exceptional achievement in a Bachelor of Science degree and additional technical and professional accomplishments. During teaching and training experiences, the student is expected to demonstrate in-depth and comprehensive knowledge of the discipline and skills essential to the dissemination of that knowledge. Additionally, the student must be able to plan, conduct, manage, and publish independent, original research via the dissertation and peer-reviewed manuscripts.

In addition to meeting the requirements of the University and of the College of Agriculture and Natural Resources, students must meet the requirements specified below.

Admission

To be considered for admission to the Doctor of Philosophy degree program in biosystems engineering, an applicant must take the Graduate Record Examination General Test and have the scores sent to the department.

Regular Status. Admission to the doctoral degree program in biosystems engineering with regular status may be granted by the department, subject to the availability of resources and to the approval of the dean.

To be admitted to the doctoral program in biosystems engineering, an applicant should have a master’s degree and must:

1. Have either a Bachelor of Science degree in engineering or a master’s degree in engineering.
2. Demonstrate evidence of ability and resolution to complete a doctoral program, as attested by the department upon review of the applicant’s academic record, test scores, experience, reference statements, professional qualifications, proposed studies, and other relevant information.

Admission to the doctoral program without a master’s degree, or the equivalent thereof, requires special approval by the department and the dean.

Provisional Status. Admission to the doctoral degree program in biosystems engineering with provisional status may be granted by the department, subject to the approval of the dean:

1. To an applicant qualified for regular admission except that collateral courses are deemed necessary, or
2. To an applicant whose record is incomplete.

A student who is admitted to the Doctor of Philosophy degree program without a Master of Science degree in engineering may be required to complete collateral courses, in addition to the courses that are required for the doctoral degree. If collateral courses are required, they will be specified on the admission form. Biosystems Engineering 490 and 890 may not be used to satisfy collateral course requirements.

The provisional status will be changed to regular status when the conditions specified on the admission form have been met, as determined by the department and approved by the dean.

Guidance Committee

The student’s guidance committee consists of at least four regular faculty members and is appointed by the department chairperson in consultation with the student and the appropriate faculty members, and with the approval of the dean. At least two members of the guidance committee shall be from the Department of Biosystems and Agricultural Engineering and at least one member shall be from a different department preferably in the College of Agriculture and Natural Resources or the College of Engineering. The chairperson of the guidance committee will be appointed by the department chairperson after consultation with the student and the person recommended to chair the committee.

Guidance Committee Report

The student’s program of study shall be submitted for approval to the Department of Biosystems and Agricultural Engineering and to the dean by no later than the end of the student’s second semester of enrollment in the doctoral program. The subject matter and instructor must be specified for every independent study, special problems, or selected topics course that is included in the student’s approved program of study.

The student’s program of study must be approved in order for the student to continue to enroll in the doctoral degree program beyond the second semester.

Modification of Program

The following changes are not permitted in a student’s approved program of study:

1. Adding or deleting a course for which a grade has already been assigned under any of the three grading systems (numerical, Pass–No Grade, or Credit–No Credit).
2. Adding or deleting a course for which grading was postponed by the use of the DF–Deferred marker.
3. Adding or deleting a course which the student dropped after the middle of the semester and for which “W” or “N” or “0.0” was designated.
4. Adding or deleting a course during the final semester of enrollment in the doctoral degree program.

Requirements for the Doctor of Philosophy Degree in Biosystems Engineering

The student must:

1. Complete a minimum of 24 credits in Biosystems Engineering 999.
2. Complete a minimum of 38 additional credits (excluding Biosystems Engineering 999) beyond the bachelor's degree, in courses at the 400–, 800–, and 900–level including:
   a. All of the following courses:
      - BE 815 Instrumentation for Biosystems Engineering ........ 3
      - BE 820 Research Methods in Biosystems Engineering ........ 1
      - BE 825 Properties and Characteristics of Biological Materials ........ 3
      - BE 835 Engineering Analysis and Optimization of Biological Systems ........ 3
      - BE 892 Biosystems Engineering Seminar .................. 1
   b. Additional course work approved by the student's guidance committee, based on the student's prior academic background in relation to the selected area of study and research.
3. Pass the doctoral comprehensive examination within five years of the date of first enrollment and at least six months prior to the final oral examination in defense of the dissertation. The examination may be retaken once. It is the student's responsibility to obtain detailed information about this examination from the department.
4. Pass the examination in defense of the dissertation. The examination may be retaken once.
5. Provide to the major professor and to the department a hard-bound copy of the dissertation made from the original unbound manuscript submitted to the Office of The Graduate School. Arrangements for delivery of the copies shall be made when the original manuscript is submitted to the Office of The Graduate School.

Academic Standards

1. **Grades.** The student must earn a grade of 2.0 or higher in each course in the approved guidance committee report, including collateral courses and courses accepted in transfer. The student must repeat any course on the approved program for which the grade earned was below 2.0.
2. **Cumulative Grade–Point Average.** The student must maintain a cumulative grade–point average of at least 3.00 in courses in the approved guidance committee report, with the exception of collateral courses and courses accepted in transfer.
3. **Deferred Grades.** A student may accumulate no more than three deferred grades (identified by the DF–Deferred marker) in courses other than independent study.
4. **Probational Status.** A student is placed on probational status if either or both of the following conditions apply:
   a. The student's cumulative grade–point average for the courses in the approved guidance committee report is below 3.00.
   b. The student has accumulated more than three deferred grades (identified by the DF–Deferred marker) in courses other than those courses the primary focus of which is independent study.
   A student in probational status is not allowed to carry more than 7 credits per semester or to enroll in any course the primary focus of which is independent study.
5. **Retention In and Dismissal From the Program.**
   a. **Cumulative Grade–point Average.** Should a student's cumulative grade–point average fall below 3.00 after having completed half of the courses in the approved guidance committee report, the student may be enrolled in probational status in the doctoral degree program for one additional semester. If at the end of the additional semester the student's cumulative grade–point average is 3.00 or higher, the student may continue to enroll in the doctoral degree program. If at the end of the additional semester the student's cumulative grade–point average is still below 3.00, the student will be dismissed from the program.
   b. **Deferred Grades.** Should a student accumulate more than three deferred grades (identified by the DF–Deferred marker) in courses other than independent study, the student may be enrolled on probational status in the doctoral degree program for one additional semester. If at the end of the additional semester the student has no more than three deferred grades, the student may continue to enroll in the doctoral degree program. If at the end of the additional semester the student still has more than three deferred grades, the student will be dismissed from the program.
   c. **Academic Progress and Professional Potential.** Each student's academic progress and professional potential are evaluated spring semester of each year. A student who in the judgment of the faculty is not making satisfactory academic progress or lacks professional potential will be dismissed from the program.

DEPARTMENT of COMMUNITY, AGRICULTURE, RECREATION and RESOURCE STUDIES

Scott Witter, Chairperson

The Department of Community, Agriculture, Recreation and Resource Studies is an interdisciplinary department that offers programs leading to the Bachelor of Science, Master of Science, and Doctor of Philosophy degrees. The department's purpose is the education of scholars and practitioners who are trained to address current and future challenges across inter-related issues in natural resources, recreation, agriculture and communities.

The department has a multidisciplinary faculty committed to scholarly programs in four cross-cutting areas that assist the development of sustainable communities: natural resources and the environment; education, communication and leadership; community, food and agriculture; and recreation and tourism. The department's programs provide opportunities for students to obtain a broad, interdisciplinary education, apply theory in practice, and emphasize one or more interdisciplinary professional areas.

Credit and non-credit courses, both on and off campus, are offered for MSU Extension personnel and teachers of agriscience and environmental studies. Workshops, virtual courses, study abroad programs, and seminars are conducted to provide professional development.
AGRICULTURE AND NATURAL RESOURCES  
Department of Community, Agriculture, Recreation and Resource Studies

UNDERGRADUATE PROGRAMS

AGRICIENCE

This major provides a foundation for students seeking careers in the dynamic agricultural and natural resources industries. Organizing workshops and seminars, developing leadership programs for agribusiness and government agencies and for adults and youth in agriculture, and representing new product lines and services for private industry are some of the exciting careers available to agriscience graduates.

Farm organizations, private agribusinesses, and government agencies need men and women knowledgeable in a broad spectrum of agricultural disciplines. There are many professional opportunities in extension, government agencies, and private businesses as human resource directors, professional development coordinators, or public school teachers.

Requirements for the Bachelor of Science Degree in Agriscience

1. The University requirements for bachelor's degrees as described in the Undergraduate Education section of this catalog; 120 credits, including general elective credits, are required for the Bachelor of Science degree in Agriscience.

The University's Tier II writing requirement for the Agriscience major is met by completing Agriculture and Natural Resources 489 and Agriculture and Natural Resources Education and Communication Systems 410 and 411. Those courses are referenced in items 2. and 3. a. below.

Students who are enrolled in the Agriscience major leading to the Bachelor of Science degree in the Department of Community, Agriculture, Recreation and Resource Studies may complete an alternative track to Integrative Studies in Biological and Physical Sciences that consists of the following courses: Biological Science 110, Chemistry 141, 143 and 161. The completion of Biological Science 110 and Chemistry 161 satisfies the laboratory requirement. Biological Science 110, Chemistry 141, 143 and 161 may be counted toward both the alternative track and the requirements for the major referenced in item 3. below.

The completion of the College of Agriculture and Natural Resources mathematics requirements may also satisfy the University mathematics requirements.

2. The requirements of the College of Agriculture and Natural Resources for the Bachelor of Science degree.

Certain courses referenced in requirement 3. below may be counted toward College requirements as appropriate.

3. The following requirements for the major:

AGRICULTURE and NATURAL RESOURCES COMMUNICATIONS

The agriculture and natural resources communications major is designed to prepare students for careers in agriculture and natural resources journalism, public relations, advertising, broadcasting, or marketing communications. Professionals combine agriculture and natural resources subject-matter knowledge with skills in writing, speaking, photography, layout and design, and information management. Interviewing agricultural producers, scientists, and agribusiness and political leaders; attending press conferences, trade shows, and legislative sessions; reporting new products and trends; preparing and executing communications plans; and developing websites and CD-ROMS for clients are some of the exciting activities of agriculture and natural resources communicators.

Colleges, advertising and public relations agencies, trade associations, government agencies, extension services, and corporations need men and women who can tell the story of agriculture and natural resources to a variety of audiences. Success in these organizations may lead to positions as editors, advertising account supervisors, public relations directors, and marketing communications managers.

The agriculture and natural resources communications major is offered in cooperation with the College of Communication Arts and Sciences.

Requirements for the Bachelor of Science Degree in Agriculture and Natural Resources Communications

1. The University requirements for bachelor’s degrees as described in the Undergraduate Education section of this catalog; 120 credits, including general elective credits, are required for the Bachelor of Science degree in Agriculture and Natural Resources Communications.

The University's Tier II writing requirement for the Agriculture and Natural Resources Communications major is met by completing Agriculture and Natural Resources Education and Communication Systems 300, 311, 410, and 411. Those courses are referenced in item 3. a. below.

The completion of the College of Agriculture and Natural Resources mathematics requirement may also satisfy the University mathematics requirement.

2. The requirements of the College of Agriculture and Natural Resources for the Bachelor of Science degree.

3. The following requirements for the major:

   a. Certain courses referenced in requirement 3. b. below may be counted toward College requirements as appropriate.

   b. (2) One of the following courses:

      CEP 240 Diverse Learners in Multicultural Perspective ........................................... 3
      TE 250 Human Diversity, Power, and Opportunity in Social Institutions .................. 3

   (3) Eleven additional credits in courses in the College of Communication Arts and Sciences, at least 6 of which must be in 300–400 level courses.

   (4) One of the following two concentrations (12 credits):

      (1) Natural Resources. Twelve credits from the following courses:

         FOR 204 Forest Vegetation .................................. 4
         FOR 220 Forests and the Global Environment .......... 3
         FW 203 Resource Ecology .................................. 3
         FW 284 Natural History and Conservation in Michigan . .......... 3
         PRR 213 Introduction to Parks, Recreation and Leisure .......... 3
         PRR 302 Environmental Attitudes and Concepts .......... 3
         PRR 351 Recreation and Natural Resources Communication (W) ........ 3
         RD 201 Environmental Communications ......... 3

      (2) Agriculture. Twelve credits from the following courses:

         ANS 110 Introductory Animal Agriculture ................. 4
         CSS 101 Introduction to Crop Science .................. 3
         CSS 210 Fundamentals of Soil and Landscape Science .......... 3
         EEP 260 World Food, Population and Poverty ............ 3
         FSM 200 Introduction to Food Systems Management .... 3
         FSM 325 Agribusiness Labor and Personnel Management .... 3
         FSH 330 Farm Business Management .......... 3
         HRT 100 Horticulture: Plants and People ................ 3

ENVIRONMENTAL STUDIES AND APPLICATIONS

The Department of Community, Agriculture, Recreation and Resource Studies offers a Bachelor of Science degree program with a major in environmental studies and applications. The mission of the program is to educate a diverse assembly of practitioners who will work across disciplines and at many professional levels to bring knowledge to bear on problems associated with the human–environment interface.

The central focus of the environmental studies and applications program is the interaction between sociocultural factors and the environment. In addition to a set of core courses, each student will select five courses from a set of environmental studies courses and three courses from a set of environmental applications courses. The environmental studies courses enhance the theoretical understanding of environmental, human, social, and political implications of resource management. The environmental applications courses develop skills in the application of analytical tools to professional practice. With the required selection of courses from these two capacity-building areas, each student will be exposed to examples of comparative environmental management at the community, county, state, national and international levels.

Students are prepared for careers in government agencies, regional planning organizations, nongovernmental organizations, private consulting firms, and industry, as well as for graduate or professional school.

Requirements for the Bachelor of Science Degree in Environmental Studies and Applications

1. The University requirements for bachelor’s degrees as described in the Undergraduate Education section of this catalog; 120 credits, including general elective credits, are required for the Bachelor of Science degree in Environmental Studies and Applications.

The University’s Tier II writing requirement for the Environmental Studies and Applications major is met by completing Agriculture and Natural Resources 489 and Resource Development 300. Those courses are referenced in items 2. and 3. a. below.

Students who are enrolled in the Environmental Studies and Applications major leading to the Bachelor of Science degree in the Department of Community, Agriculture, Recreation and Resource Studies may complete an alternative track to Integrative Studies in Biological and Physical Sciences that consists of the following courses: Biological Science 110, Chemistry 141 and Zoology 355 and 355L. The completion of Biological Science 110 and Zoology 355L satisfies the laboratory requirement. Biological Science 110, Chemistry 141 and Zoology 355 and 355L may be counted toward both the alternative track and the requirements for the major referenced in item 3. below.

The completion of the College of Agriculture and Natural Resources mathematics requirement may also satisfy the University mathematics requirement.

2. The requirements of the College of Agriculture and Natural Resources for the Bachelor of Science degree.

   a. Certain courses referenced in requirement 2. b. below may be counted toward College requirements as appropriate.

   b. (2) One of the following courses (3 or 4 credits):

      ADV 227 Principles of Public Relations .................. 4
      JRN 200 News Writing and Reporting I ............... 4
      JRN 300 News Writing and Reporting II .......... 4
      COM 225 Introduction to Interpersonal Communication .......... 3

   (1) All of the following courses (12 credits):

      FSM 200 Introduction to Food Systems Management .... 3
      FSM 220 Agribusiness Labor and Personnel Management .... 3
      FSH 330 Farm Business Management .......... 3
      HRT 100 Horticulture: Plants and People ................ 3
The following requirements for the major:

1. All of the following core courses:
   - RD 200 Issues and Applications of Resource Development 3
   - RD 300 Environmental Communication and Conflict Management 3
   - RD 302 Natural Resource Issues 3
   - RD 430 Law and Resources 3
   - RD 440 The Resource Development Policy Process in Michigan 3
   - ZOL 355 Ecology 3

2. Environmental Studies. Five of the following courses:
   - EEP 201 Community Economics 3
   - EEP 255 Ecological Economics 3
   - RD 201 Environmental and Natural Resources 3
   - RD 301 Federal and State Environmental Policy 3
   - RD 320 Resource Management and Planning 3
   - RD 324 Water Resource Management 3
   - RD 444 Statistics, People and Politics 3
   - RD 452 Watershed Concepts 3
   - RD 460 Resource and Environmental Economics 3
   - RD 461 Regional Economics 3
   - RD 470 Theory and Practice in Community and Economic Development 3

3. Environmental Applications. Three of the following courses: 9 to 12
   - EEP 404 Public Sector Budgeting and Program Evaluation (W) 3
   - ENT 442 Concepts of Biological Information Systems 3
   - GEO 221 Introduction to Geographic Information Systems 3
   - GEO 425 Geographic Information Systems 3
   - RD 313 Community Planning and Fund Development 3
   - RD 314 Environmental Assessment of Land Use 3
   - RD 315 Applications of Survey Research 3
   - SOC 281 Methods of Social Research I 4
   - RD 415 Environmental Impact Assessment 4

4. Earth Science. One of the following courses: 3 or 8
   - GEO 206 Physical Geography 3
   - GEO 206L Physical Geography Laboratory 1
   - GLG 201 The Dynamic Earth 4
   - CSS 210 Fundamentals of Soil and Landscape Science 3
   - GLG 421 Environmental Geochemistry 4
   - FW 324 Wildlife Biometry 3
   - STT 200 Statistical Methods 3
   - STT 201 Statistical Methods 4

5. Broadening Experience. One of the following courses: 2 to 7
   - RD 493 Professional Internship in Resource Development 3
   - RD 495 Senior Seminar 2
   - RD 499 Senior Thesis Research 3
   - Departmentally approved Study Abroad/Exchange Programs 3 to 7

6. Electives: 18 to 25

The Department offers a Bachelor of Science degree in Park, Recreation and Tourism Resources. The program has been accredited by the National Recreation and Park Association (NRPA) with the American Association for Leisure and Recreation (AALR). By combining a body of specialized professional knowledge with the study of natural, social, management, and behavioral sciences, the program provides an opportunity for the student to obtain a broad, interdisciplinary, liberal education and to emphasize one or more interdisciplinary professional areas. The park, recreation and tourism resources major is designed to prepare students for professional positions in park, recreation, tourism, and leisure services. Persons in such positions administer programs and manage facilities and operate businesses designed to serve people's leisure needs and enhance their quality of life.

Students in the Park, Recreation and Tourism Resources major must acquire an understanding of conceptual foundations of recreation and leisure, leisure service delivery systems, leadership and programming principles, leisure behavior, recreational needs of special populations, policy and administration, and principles and procedures for assessment, planning, and evaluation of park, recreation and tourism services. They also must acquire the ability to integrate theory with practice in the area of park, recreation, tourism, and leisure services. In addition to the professional program, students in the department complete at least one of the following interdisciplinary professional emphasis areas designed to provide additional breadth and depth:

**Natural Resource-Based Recreation Management**

Federal, state, county, and municipal park systems offer a variety of career opportunities in resource management. Careers may also be found in the private and nonprofit service sectors managing both public and private lands for recreational purposes.

Resource managers are responsible for developing and managing recreational facilities such as campgrounds, trails and boating, and swimming sites. They work with wildlife biologists, landscape architects, historians, archaeologists, park interpreters, and others in the planning of sites and management of visitors to minimize environmental impacts and optimize recreational experiences. Graduates may assume middle and upper management positions in municipal, metropolitan, county, state, and national park systems.

**Community-Based Recreation**

Students enrolled in this emphasis focus on enhancing the quality of life within urban and rural communities through the management of recreation and park programs and services. They gain an understanding of community recreation systems and work directly with people in an inclusive manner, programming with and for them in various types of agencies such as public recreation, non-profit agencies, employee recreation and campus recreation. They also acquire knowledge regarding community agencies and diverse cultures.

Students gain an understanding of the nature of programs and the facilities used in the provision of these recreation and park programs. They learn about the management of a variety of recreation facilities such as urban (large city and metropolitan) and rural (small towns) parks, sports complexes, golf courses, health and fitness centers, and community centers.

Students, as facility managers, need to have a deep understanding of facility planning, design and operations; knowledge about the programs that occur in the facility, program strategies and operations, and program development, planning, implementation and evaluation. In the management of facilities, programs, and services, students will also learn about essential legal considerations within community-based recreation systems.

**Tourism and Commercial Recreation**

Tourism and commercial recreation continue to be growth industries requiring managers who are skilled in recreation, marketing, and planning. This emphasis is designed to prepare students for careers in commercial recreation, natural resource-based tourism, and community-centered tourism. Students who are interested in commercial recreation may select courses related to starting or managing businesses such as marinas, natural resource-based resorts, or recreation lodging establishments. Students who are interested in tourism may select courses related to careers in state tourism marketing agencies, tourism consulting firms, visitor and convention bureaus, or natural resource management agencies, or in international commercial recreation and tourism.

**Zoo and Aquarium Science**

The operation of modern zoo and aquarium facilities requires an integrated, interdisciplinary team to address such areas as animal care and health, the management of species survival programs, fundraising, landscape and enclosure design, visitor management, and interpretation and education. Increasingly,
bachelor’s degree is required for employment in zoos and aquariums. The zoo and aquarium science emphasis is designed to prepare students for careers in management and interpretive education within zoo and aquarium environments. Students in this emphasis complete courses in zoology and other departments, as well as courses in park, recreation and tourism resources.

Admission as a Junior
To be considered for admission to the Park, Recreation and Tourism Resources major, the student must have:
1. Completed at least 56 credits.
2. Completed the following courses with a grade of at least 2.00 in each:
   a. Park, Recreation and Tourism Resources 213.
   b. Park, Recreation and Tourism Resources 215.
For additional information about admissions criteria and procedures, students should contact the Department of Community, Agriculture, Recreation and Tourism Studies.

Requirements for the Bachelor of Science Degree in Park, Recreation and Tourism Resources
1. The University requirements for bachelor’s degrees as described in the Undergraduate catalog section of this catalog: 120 credits, including general education requirements, are required for the Bachelor of Science degree in Park, Recreation and Tourism Resources.
2. The University’s Tier II writing requirement for the Park, Recreation and Tourism Resources major is met by completing Agriculture and Natural Resources 489 and Park and Recreation Resources 351. Those courses are referenced in items 2. and 3. below.
3. The completion of the College of Agriculture and Natural Resources mathematics requirement may also satisfy the University mathematics requirement.
4. The requirements of the College of Agriculture and Natural Resources for the Bachelor of Science degree.
   a. Certain courses referenced in requirement 3. below may be counted toward College requirements as appropriate.
   b. The following requirements for the major:
      a. All of the following courses: .......................................................... 30 to 36
         CSE 101 Computing Concepts and Competencies ........ 3
         PRR 213 Introduction to Parks, Recreation,
            and Leisure ............................................................................... 3
         PRR 215 Recreation Program Management ............ 4

         STT 315 Introduction to Probability and Statistics
            for Business ........................................................................... 3
   c. One sociology or psychology course of at least 3 credits. ........ 3
   d. One of the following four emphases: ......................................... 21 to 30
      Natural Resource-Based Recreation Management
      (21 credits): ............................................................................
      (1) One of the following courses (3 credits):
         PRR 210 Our National Parks and Recreation Lands . . .. 3
         PRR 302 Environmental Attitudes and Concepts .... 3
      (2) Both of the following courses (6 credits):
         PRR 448 Foundations of Natural Resource Based
            Recreation Management ....................................................... 3
         PRR 449 Natural Resource Based Recreation
            Management Applications ............................................... 3
      (3) At least 12 additional credits, with no more than 6 credits
            at the 100-200 level, selected from a list of approved courses in
            consultation with the student’s academic advisor.

Community-Based Recreation (21 credits):
(1) All of the following courses (9 credits):
   a. PRR 485 Legal Aspects of Community-Based
      Recreation ............................................................................... 3
   b. PRR 487 Community-Based Recreation Facility
      Management ............................................................................. 3
   c. PRR 488 Community-Based Recreation Programming . . . . . . 3
   (2) At least one course from each of the following areas
        (12 credits):
         a. Youth, Family, and Youth at Risk
            FCE 212 Children, Youth and Family ................. 3
            SOC 215 Family and Society .................................. 3
            KIN 460 Developmental Bases of Motor Skills .... 2
         b. Sociology
            SOC 315 Race and Ethnicity ................................... 3
            SOC 216 Sex and Gender ......................................... 3
         c. Psychology
            PSY 239 Psychology of Women .......................... 3
            PSY 270 Community Psychology .......................... 3
         d. Diversity
            FCE 442 Ethnic Minority Families in America .... 3
            FOR 211 Introduction to Gender and Environmental
               Issues ............................................................................... 3
         e. Urban and Rural Planning and Design
            GEO 151 Cultural Geography .................................. 3
            GEO 259 Geography of Recreation and Tourism . . . 3
            HRT 100 Horticulture: Plants and People ............. 3
            HRT 311 Landscape Design and Management
               Specifications ................................................................. 4
            KIN 454 Facility Planning and Construction .......... 3
            UP 201 The Role of Planning in Urban and Regional
               Development ................................................................. 4

Tourism and Commercial Recreation (21 credits):
(1) Both of the following courses (8 credits):
   a. PRR 473 Commercial Recreation and
      Tourism Enterprises ............................................................. 3
   b. PRR 474 Community and Natural Resource
      Based Tourism ..................................................................... 3
(2) All of the following courses (15 credits):
   a. ACC 230 Survey of Accounting Concepts .......... 3
   b. GBL 323 Introduction to Business Law ............. 3
   c. MGT 325 Management Skills and Processes ....... 3
   d. MGT 327 Introduction to Marketing ...................... 3

Zoo and Aquarium Science (30 credits):
(1) All of the following courses (17 credits):
   a. ZOL 313 Animal Behavior .................................. 3
   b. ZOL 369 Introduction to Zoo and Aquarium Science . . . 3
   c. ZOL 489 Seminar in Zoo and Aquarium Science .... 2
(2) Thirteen additional credits in zoo and aquarium science
   from a list of approved courses available from the Department of
   Community, Agriculture, Recreation and Tourism Studies:
   a. The student may complete an emphasis other than one of the
      ones referenced below to satisfy this requirement. Examples of
      other emphases are Park Law Enforcement and Park Interpretation
      and Visitor Information Service. Both the emphasis and the
      related courses must be approved by the student's academic ad-
      viser.

TEACHER CERTIFICATION OPTIONS
The agriscience disciplinary major leading to the Bachelor of Science degree is available for teacher certification. Students who complete the requirements for the agriscience disciplinary major, the requirements for teacher certification, and a minimum of 4000
hours of recent and relevant work experience are recommended for vocational endorsement in agricultural education. An agriscience disciplinary minor is available for teacher certification.

Students who elect the agriscience disciplinary major or the agriscience disciplinary minor, must contact the Department of Community, Agriculture, Recreation and Resource Studies.

For additional information, refer to the statement on TEACHER CERTIFICATION in the Department of Teacher Education section of this catalog.

GRADUATE STUDY

The Department of Community, Agriculture, Recreation and Resource Studies offers Master of Science and Doctor of Philosophy degree programs in Community, Agriculture, Recreation and Resource Studies.

Graduate programs in Community, Agriculture, Recreation and Resource Studies provide students the opportunity to create individualized programs that draw from several complementary areas of scholarship. These areas include: community, food and agriculture; natural resources and the environment; recreation and tourism; and, communication and leadership. Today’s communities face complex problems due to ongoing changes to our environmental, social and agricultural/food systems. To aid in meeting these challenges, students’ programs are designed to provide a thorough grounding in integrative, applied research based on multiple paradigms, disciplines and methods.

Students who are enrolled in Master of Science and Doctor of Philosophy degree programs in the Department of Community, Agriculture, Recreation and Resource Studies may elect specializations in resource economics. For additional information, refer to the statement on Interdepartmental Graduate Specializations in Resource Economics.

Students who are enrolled in Master of Science degree programs in the Department of Community, Agriculture, Recreation and Resource Studies may elect a Specialization in Environmental Toxicology. For additional information, refer to the Graduate Specialization in Environmental Toxicology statement.

Master of Science

The Master of Science in Community, Agriculture, Recreation and Resource Studies provides students with opportunities to engage in integrated and applied research and acquire professional skills.

In addition to meeting the requirements of the University and of the College of Agriculture and Natural Resources, students must meet the requirements specified below.

Admission

Applicants must have completed a bachelor’s degree or comparable degree requirements from an educational institution. Relevant experience and strong academic backgrounds in the natural, physical, or social sciences are encouraged for applicants to the Master of Science in Community, Agriculture, Recreation and Resource Studies. All applicants for admission are required to submit scores from the General Test of the Graduate Record Examination. Collateral courses may be required to overcome deficiencies in addition to the requirements for the master’s degree. Collateral course work will not count towards the master’s degree.

Requirements for the Master of Science Degree in Community, Agriculture, Recreation and Resource Studies

The student may elect either Plan A (with thesis) or Plan B (without thesis). Plan A emphasizes integrated and applied research and is designed as the foundation for doctoral study. Plan B focuses on the acquisition of well-defined professional skills, appropriate for a terminal degree and for professional employment. A minimum of 30 credits is required for the degree under Plan A and Plan B. The student’s program of study must be developed in cooperation with and approved by the student’s guidance committee and must include the requirements specified below.

CREDITS

Requirements for Plan A and Plan B

1. Both of the following courses (6 credits):
   - ACR 800 Foundations of Community, Agriculture, Recreation and Resource Studies
   - ACR 802 Survey of Research Methods

2. A minimum of 15 credits in course work in a focus area selected in consultation with the student’s guidance committee. At least 6 credits of this focus area must be in Community, Agriculture, Recreation and Resource Studies courses.

Additional Requirements for Plan A

1. A minimum of 3 credits of quantitative or qualitative methods to be selected in consultation with the student’s guidance committee.
2. A minimum of 6 credits of Community, Agriculture, Recreation and Resource Studies 899.
3. Completion and defense of the master’s thesis.

Additional Requirements for Plan B

1. A minimum of 3 credits of a techniques or skill-building course relevant to the student’s academic and career goals, to be selected in consultation with the student’s guidance committee.
2. Both of the following courses:
   - ACR 895 Case Studies in Community, Agriculture, Recreation and Resource Studies
   - ACR 898 Master’s Professional Project

3. Completion and defense of a paper based on the master’s professional project.

Doctor of Philosophy

The Doctor of Philosophy in Community, Agriculture, Recreation and Resource Studies is designed to enable students to generate new knowledge in complementary fields responsive to rapidly changing conditions in our natural environment and agricultural systems.

In addition to meeting the requirements of the University and of the College of Agriculture and Natural Resources, students must meet the requirements specified below.

Admission

To be admitted to the Doctor of Philosophy degree program in Community, Agriculture, Recreation and Resource Studies, a student must have completed a master’s degree. Relevant experience and strong academic backgrounds in the natural, physical, or social sciences, including independent research experience, are strongly encouraged. All applicants are required to submit scores from the General Test of the Graduate Record Examination.

Requirements for the Doctor of Philosophy Degree in Community, Agriculture, Recreation and Resource Studies

The student’s program of study must be developed in cooperation with and approved by the student’s guidance committee and must include the requirements specified below.

1. Complete Community, Agriculture, Recreation and Resource Studies 800.
2. Complete 9 credits of course work in advanced research methods, to be selected in consultation with the student’s guidance committee, including at least 3 credits respectively in quantitative and qualitative methods.
3. Complete a minimum of 24 credits of course work in two focus areas. At least 9 credits and at least one course in each focus area must be selected from Community, Agriculture, Recreation, and Resource Studies courses.
4. Prepare a comprehensive examination program statement that presents the student’s learning and professional background and goals, and provides a rationale for the stu-
DEPARTMENT of CROP and SOIL SCIENCES

Douglas D. Buhler, Chairperson

UNDERGRADUATE PROGRAMS

The department offers two undergraduate majors, Crop and Soil Sciences and Environmental Soil Science. The Crop and Soil Sciences major includes three concentrations: Agronomic Sciences, Turfgrass Management, and Advanced Studies. Each program is built on a broad educational base with a core of professional courses and sufficient electives to allow students and advisors to tailor individualized programs.

CROP and SOIL SCIENCES

The Crop and Soil Sciences major is based upon the continuously expanding knowledge base of the biological and physical sciences and the utilization of those sciences to produce food and fiber of high quality on a competitive basis to promote sustainability, and to obtain increased nutrient-use efficiency, proper land use, increased plant adaptation to environmental and other stresses, decreased soil erosion, and decreased environmental pollution. Crop and soil scientists utilize the principles of genetics, plant breeding, crop physiology, weed science, turfgrass science, soil physics, soil fertility, soil genesis and classification, and soil chemistry.

Majors complete a common core of courses and one concentration: Agronomic Sciences, Turfgrass Management or Advanced Study. Students enrolled in this degree program, based on the agreement of cooperation between Michigan State University and Beijing Forestry University, Northeast Agricultural University, Sichuan Agricultural University, and Suzhou Polytechnic Institute of Agriculture in China must complete the concentration in Turfgrass Management.

1. Agronomic Sciences is designed to prepare students to work as agronomists. These scientists have career opportunities in agricultural business and in government agencies such as departments of agriculture and/or natural resources, the Natural Resources Conservation Service and the Extension Service. They also work and consult pest management specialists and managers of grower organizations and with land appraisal firms, agencies involved with environmental issues, and in international agriculture.

2. Turfgrass Management is designed to prepare students for the rapidly expanding area of urban agriculture. Graduates have career opportunities in the industries involved with management of golf courses, athletic fields, lawns and park and grounds management.

3. Advanced Study is specifically designed for those students who plan to pursue graduate studies. Although students who complete the other concentrations may pursue graduate study, this concentration requires the completion of advanced levels of mathematics and advanced courses in the basic sciences.

Students may also complete a specialization in international agriculture, agribusiness management, agriculture and natural resources biotechnology, connecting learning, environmental economics, food industry management, or environmental studies. Students may qualify to teach agriscience in high school under a plan of study cooperatively developed by the student’s faculty adviser and the Department of Agricultural and Natural Resources Education and Communication Systems. For additional information on any of the specializations, refer to the General Index section in this publication or visit http://www.reg.msu.edu/UCC/specializations.asp.

Requirements for the Bachelor of Science Degree in Crop and Soil Sciences

1. The University requirements for bachelor’s degrees as described in the Undergraduate Education section of this catalog: 120 credits, including general elective credits, are required for the Bachelor of Science degree in Crop and Soil Sciences. The University’s Tier II writing requirement for the Crop and Soil Sciences major is met by completing two courses as specified below:

   Agronomic Sciences: Both of the following courses: Crop and Soil Sciences 488 and 492. Those courses are referenced in items 3. a. and 3. b. below.

   Turfgrass Management: Both of the following courses: Crop and Soil Sciences 382 and 492. Those courses are referenced in items 3. a. and 3. b. below.

2. The requirements of the College of Agriculture and Natural Resources for the Bachelor of Science degree in the Department of Crop and Soil Sciences, may complete an alternative track to Integrative Studies in Biological and Physical Sciences that consists of the following courses:

   Plant Biology 105 and 106 and Chemistry 141, 143, and 161. The completion of Plant Biology 105 and Chemistry 141, 143, and 161 satisfies the general education requirement.

   Plant Biology 105 and 106 and Chemistry 141, 143, and 161 may be counted toward both the alternative track and the requirements for the major referenced in item 3. below.

   Students who are enrolled in the Agronomic Sciences or Turfgrass Management concentrations of the Crop and Soil Sciences major leading to the Bachelor of Science degree in the Department of Crop and Soil Sciences, may complete an alternative track to Integrative Studies in Biological and Physical Sciences that consists of the following courses: Plant Biology 105 and Chemistry 151, 152, and 161. The completion of Chemistry 161 satisfies the laboratory requirement. Plant Biology 105 and Chemistry 151, 152, and 161 may be counted toward both the alternative track and the requirements for the major referenced in item 3. below.

3. The completion of the College of Agriculture and Natural Resources mathematics requirements may also satisfy the University mathematics requirement.

   Certain courses referenced in requirement 3. below may be counted toward College requirements as appropriate. For students who select the Advanced Study Option, the completion of Mathematics 124 and 126 satisfies the College’s mathematics requirement.

   The following requirements for the major:

   a. All of the following courses: .......................... 7

      CEM 161 Chemistry Laboratory I .................. 1

      CSS 110 Computer Applications in Agronomy ...... 2

      CSS 210 Fundamentals of Soil and Landscape Science .................. 3

      CSS 492 Seminar .................................. 1

   b. One of the following three concentrations: 60 to 68

      Agronomic Sciences (60 to 62 credits):

      (1) All of the following courses (58 credits):

         CEM 141 General Chemistry .................. 4

         CEM 143 Survey of Organic Chemistry .......... 4

         CSS 101 Introduction to Crop Science .......... 3

         CSS 192 Professional Development Seminar I .. 1

         CSS 310 Soil Management and Environmental Impact .................. 3

         CSS 350 Introduction to Plant Genetics .......... 3

         CSS 355 Environmental Soil Chemistry .......... 3

         CSS 380 Crop Physiology ........................ 3

         CSS 402 Principles of Weed Science .......... 3

         CSS 430 Soil Fertility and Chemistry .......... 3

         CSS 470 Soil Resources .......................... 3

         CSS 488 Agricultural Cropping Systems: Integration and Problem Solving .................. 3

         CSS 493 Professional Internship in Crop and Soil Sciences .............. 3

         ENT 404 Insects: Success in Biodiversity ....... 4

         MTH 116 College Algebra and Trigonometry ..... 5

         PLB 105 Plant Biology ................................ 3

AGRICULTURE AND NATURAL RESOURCES
Department of Crop and Soil Sciences

PLB 301 Introductory Plant Physiology .......................... 3
PLP 405 Plant Pathology .................................................. 3
(2) One of the following courses (2 to 4 credits):
CSS 222 New Horizons in Biotechnology ....................... 2
CSS 441 Plant Breeding and Biotechnology .................. 4
CSS 451 Biotechnology Applications for Plant Breeding and Genetics ........................................... 3

Turfgrass Management (63 to 88 credits):
(1) All of the following courses (39 credits):
CEM 141 General Chemistry ........................................... 4
CEM 143 Survey of Organic Chemistry ......................... 4
CSS 232 Introduction to Turfgrass Management ............. 1
CSS 272 Turfgrass Management Seminar ..................... 1
CSS 362 Management of Turfgrass Pests ..................... 3
CSS 382 Turfgrass Physiology ........................................... 2
CSS 402 Principles of Weed Science .......................... 3
CSS 493 Professional Internship in Crop and Soil Sciences .................................................. 3
EC 201 Introduction to Microeconomics ....................... 3
MTH 116 College Algebra and Trigonometry ............. 3
PLB 105 Plant Biology .................................................. 3
PLB 106 Plant Biology Laboratory ............................. 1
(2) Three of the following courses (9 or 10 credits):
CSS 310 Soil Management and Environmental Impact ....... 3
CSS 355 Environmental Soil Chemistry ....................... 3
CSS 430 Soil Fertility and Chemistry ......................... 3
CSS 440 Soil Biophysics .................................................. 2
CSS 455 Pollutants in the Soil Environment ................ 3
CSS 470 Soil Resources .................................................. 3
GLG 201 The Dynamic Earth ........................................... 4
(3) Three of the following courses (9 to 11 credits):
BM 200 Introduction to Biochemistry ......................... 4
CSS 350 Introduction to Plant Genetics ......................... 3
CSS 441 Plant Breeding and Biotechnology .................. 3
CSS 451 Biotechnology Applications for Plant Breeding and Genetics ........................................... 3
PLB 301 Introductory Plant Physiology ......................... 3
PLP 405 Plant Pathology .................................................. 3
(4) Three of the following courses (6 or 7 credits):
CSS 164 Golf Course Design and Construction Techniques .................................................. 2
CSS 171 Operations Budgeting for Golf Course Managers .................................................. 2
CSS 178 Golf Turf Irrigation ............................................. 2
CSS 181 Pesticide and Fertilizer Application Technology .................................................. 3
CSS 211 Turfgrass and the Environment ......................... 2
CSS 242 Athletic Field Maintenance and Construction .................. 2
CSS 269 Turfgrass Strategies ............................................. 2

Advanced Study (80 or 61 credits):
(1) All of the following courses (36 credits):
BMB 401 Basic Biochemistry ........................................... 4
CEM 151 General and Descriptive Chemistry ................. 4
CEM 152 Principles of Chemistry ..................................... 4
CEM 251 Organic Chemistry I ......................................... 3
CEM 252 Organic Chemistry II ....................................... 3
CSS 101 Introduction to Crop Science ......................... 3
CSS 192 Professional Development Seminar I ................ 1
CSS 350 Introduction to Plant Genetics ......................... 3
CSS 402 Principles of Weed Science ......................... 3
CSS 430 Soil Fertility and Chemistry ......................... 3
CSS 488 Agricultural Cropping Systems: Integration and Problem Solving .................................................. 3

ENVIRONMENTAL SOIL SCIENCE

Requirements for the Bachelor of Science Degree in Environmental Soil Science

1. The University requirements for bachelor’s degrees as described in the Undergraduate Education section of this catalog, 120 credits, including general elective credits, are required for the Bachelor of Science degree in Environmental Soil Science.

The University’s Tier II writing requirement for the Environmental Soil Science major is met by completing all of the following courses: Agriculture and Natural Resources 489, Crop and Soil Sciences 455 and 492. These courses are referenced in item 3.a. below.

Students who are enrolled in the Environmental Soil Science major may complete an alternative track in Integrative Studies in Biological and Physical Sciences that consists of the following courses: Biological Science 111 and Chemistry 141, 142, 161, and 162. The completion of Chemistry 161 and 162 satisfies the laboratory requirement. Biological Science 111 and Chemistry 141, 142, 161, and 162 may be counted toward both the alternative track and the requirements for the major referenced in item 3 below.

The completion of the College of Agriculture and Natural Resources mathematics requirement also satisfies the University mathematics requirement.

2. The requirements of the College of Agriculture and Natural Resources for the Bachelor of Science degree. Certain courses referenced in requirement 3, may be counted toward College requirements as appropriate. The completion of Mathematics 132 satisfies the College’s mathematics requirement.

3. The following requirements for the major:

CREDITS
78 to 80

a. All of the following courses (64 credits):
ANR 489 Integrated Approaches to Agriculture and Natural Resources Problems (W) .................. 3
BMB 200 Introduction to Biochemistry ......... 3
BS 111 Cells and Molecules ............................................. 3
CE 280 Introduction to Environmental Engineering ........ 3
CEM 141 General Chemistry ........................................... 3
CEM 142 General and Inorganic Chemistry .................. 3
CEM 143 Survey of Organic Chemistry ......................... 4
CEM 161 Chemistry Laboratory I ......................... 3
CEM 162 Chemistry Laboratory II ......................... 1
CEM 262 Quantitative Analysis ........................................... 2
CSS 210 Fundamentals of Soil and Landscape Science .................................................. 3
CSS 310 Soil Management and Environmental Impact ....... 3
CSS 455 Pollutants in the Soil Environment ................ 3
CSS 470 Soil Resources .................................................. 3
EC 201 Introduction to Microeconomics ......................... 3
ENT 442 Concepts of Biological Information Systems .... 3
GLG 201 The Dynamic Earth ........................................... 4
GLG 411 Hydrogeology .................................................. 4
MMG 301 Introduction to Microbiology ......................... 3
MMG 425 Microbial Ecology ........................................... 3
MTH 132 Calculus I .................................................. 3
b. One course from each of the following five groups (14 to 16 credits):
(1) CE 485 Solid and Hazardous Waste Management . 3
CE 491 Civil Engineering Design Project ......................... 3
(2) STT 200 Statistical Methods ........................................... 3
STT 201 Statistical Methods ........................................... 4
STT 231 Statistics for Scientists ............................ 3
STT 421 Statistics I .................................................. 1
(3) FW 465 Ecological Risk Assessment ......................... 3
PHM 450 Introduction to Chemical Toxicology ............... 3
(4) RD 366 State Environmental Law .......................... 3
RD 430 Law and Resources ........................................... 3
(5) CSS 110 Computer Applications in Agronomy .............. 4
CSE 101 Computing Concepts and Competencies ............. 3
Students who pass a waiver examination for Computer Science and Engineering 101 will not be required to complete Computer Science and Engineering 101 or Crop and Soil Sciences 110.

SPECIALIZATION IN INTERNATIONAL AGRICULTURE

This specialization is available as an elective to students who are enrolled in bachelor’s degree programs and is designed for students who have an interest in international agriculture. It seeks to increase student understanding of global agriculture, particular agriculture-related problems and issues in developing and developed nations, and issues related to sustainability and stewardship of the Earth. Students who complete this specialization will be prepared for effective employment in the arena of international agriculture and/or multinational firms.

The College of Agriculture and Natural Resources in cooperation with the Departments of Agricultural Economics, Animal Science, Crop and Soil Sciences, and Forestry, and the College of Social Science in cooperation with the Department of Anthropology participate in the Specialization in International Agriculture. The Department of Crop and Soil Sciences is the primary administrative unit.
Requirements for the Specialization in International Agriculture

The student's program of study for the specialization must be approved by the Department of Crop and Soil Sciences in advance and in writing. With the approval of the department that administers the student's degree program, courses that are used to satisfy the requirements for the specialization may also be used to satisfy the requirements for the bachelor's degree. The student must meet the requirements specified below.

CREDITS

1. Foreign Language .......................................................... 0 to 8
   Complete the equivalent of one year of a foreign language. The require-
   ment may be met by completing two semesters of a foreign language at
   MSU or by obtaining a sufficient score on the appropriate foreign lan-
   guage placement test to place into a 200-level course in that language.

2. Study Abroad Experience ................................................... 6 to 12
   Complete at least one study abroad experience that has a minimum du-
   ration of six weeks or two experiences of shorter duration.

3. Both of the following courses: .............................................. 4
   CSS 431 Soil and Plant Resources for Sustained World
   Food and Fiber Production .............................................. 3
   CSS 494 International Agriculture Seminar .......................... 1

4. One of the following courses: ............................................. 3
   ABM 427 Global Agri-Food Industries and Markets ............... 3
   ANP 470 Food, Hunger and Society ..................................... 3
   ANS 480 Animal Systems in International Development ............ 3
   FOR 450 Forestry in International Development ................... 3
   PRM 260 World Food, Population and Poverty ...................... 3

Upon completion of the requirements for the Specialization in International Agriculture, the student should contact the Chairper-
son of the Department of Crop and Soil Sciences and request cer-
tification for the completion of the specialization. After the cer-
tification is approved by the Chairperson of the Department of
Crop and Soil Sciences and the Director of Academic Affairs of
the College of Agriculture and Natural Resources, the Office of
the Registrar will enter on the student's academic record the
name of the specialization and the date that it was completed.
This certification will appear on the student's transcript.

GRADUATE STUDY

The Department of Crop and Soil Sciences offers programs lead-
ing to Master of Science and Doctor of Philosophy degrees in crop
and soil sciences and in plant breeding and genetics—crop and
soil sciences. The department also offers a Doctor of Philosophy
degree program in crop and soil sciences—environmental tox-
icityology.

The Department of Crop and Soil Sciences is affiliated with the
Doctor of Philosophy degree program with a major in ecology,
evolutionary biology and behavior. For information about a Doc-
tor of Philosophy degree program that involves ecology, evolu-
tionary biology and behavior and a major in the Department of
Crop and Soil Sciences, refer to the statement on the doctoral
program in ecology, evolutionary biology and behavior in the Col-
lege of Natural Science section of this catalog.

Students who are enrolled in Master of Science degree pro-
grams in the Department of Crop and Soil Sciences may elect
specializations in ecology, evolutionary biology and behavior and
in environmental toxicology. For additional information, refer to
the statement on the Specialization in Ecology Evolutionary
Biology and Behavior in the College of Natural Science section of
this catalog, and to the Graduate Specialization in Environmental
Toxicology statement.

CROP AND SOIL SCIENCES

The department offers the following areas of specialization within
the field of crop and soil sciences: plant breeding and genetics;
crop physiology, ecology, and management; weed science; turf-
growth management; soil genesis and classification; soil microbiol-
ogy and biochemistry; soil physics; soil chemistry; soil biophysics;
soil fertility; and environmental and pollution aspects of soil sci-
ence, including the study of waste disposal on land. Graduate
programs of study are designed to reflect the individual needs
and interests of students.

Master of Science

In addition to meeting the requirements of the University and of
the College of Agriculture and Natural Resources, students must
meet the requirements specified below.

Admission

Applicants for admission to the master's degree program should
have a bachelor's degree in crop and soil sciences or in a related
field such as botany or chemistry. Applicants should also have
substantial academic background in the physical sciences (in-
cluding chemistry and physics), in the biological sciences (includ-
ing botany), and in mathematics. The completion of an
undergraduate crop and soil sciences major with an agricultural
science specialization would be considered ideal. Students with
deficiencies in their backgrounds will be required to complete col-
lateral courses in addition to the courses that are required for
the master's degree.

Requirements for the Master of Science Degree

In addition to meeting the requirements of the University and of
the College of Agriculture and Natural Resources, students must
meet the requirements specified below.

Plan A

Applicants for admission to the master's degree program should
have a bachelor's degree in crop and soil sciences or in a related
field such as botany or chemistry. Applicants should also have
substantial academic background in the physical sciences (in-
cluding chemistry and physics), in the biological sciences (includ-
ing botany), and in mathematics. The completion of an
undergraduate crop and soil sciences major with an agricultural
science specialization would be considered ideal. Students with
deficiencies in their backgrounds will be required to complete col-
lateral courses in addition to the courses that are required for
the master's degree.

Requirements for the Doctor of Philosophy Degree

In addition to meeting the requirements of the University and of
the College of Agriculture and Natural Resources, students must
meet the requirements specified below.

Plan A

Applicants for admission to the master's degree program should
have a bachelor's degree in crop and soil sciences or in a related
field such as botany or chemistry. Applicants should also have
substantial academic background in the physical sciences (in-
cluding chemistry and physics), in the biological sciences (includ-
ing botany), and in mathematics. The completion of an
undergraduate crop and soil sciences major with an agricultural
science specialization would be considered ideal. Students with
deficiencies in their backgrounds will be required to complete col-
lateral courses in addition to the courses that are required for
the master's degree.

CROP AND SOIL SCIENCES—
ENVIRONMENTAL TOXICOLOGY

Doctor of Philosophy

For information about the Doctor of Philosophy degree program
in crop and soil sciences—environmental toxicology, refer to the
statement on Multidisciplinary Doctoral Programs in Environment-
al Toxicology in the Graduate Education section of this cata-
log.
AGRICULTURE AND NATURAL RESOURCES
Department of Crop and Soil Sciences

PLANT BREEDING and GENETICS—CROP and SOIL SCIENCES

The Department of Crop and Soil Sciences offers Master of Science and Doctor of Philosophy degree programs in plant breeding and genetics—crop and soil sciences. The requirements for admission and the requirements for the degree are specified in the statement on Interdepartmental Graduate Programs in Plant Breeding and Genetics.

DEPARTMENT of ENTOMOLOGY

Richard Merritt, Chairperson

The Department of Entomology is administered jointly by the College of Agriculture and Natural Resources and the College of Natural Science.

Entomology is the field of biological science concerned with the study and management of beneficial and harmful insects and their relatives in relation to other animals, plants, and the environment. Since insects and their relatives affect so many human activities, and because they must be studied and managed in such a variety of environments, the entomologist needs a broad, basic education.

UNDERGRADUATE PROGRAM

The undergraduate program in Entomology leads to the Bachelor of Science degree. The total program emphasizes the development of a sound education, with strengths in the physical and biological sciences necessary to work effectively in modern entomology. Courses are designed to give the student an understanding of the structure, classification, identification, function, biology, ecology, and management of beneficial and harmful insects, and the communities and ecosystems where they occur.

Three concentrations are available within the undergraduate Entomology degree program: general entomology, economic plant protection, and natural ecosystem protection. The general entomology concentration is broader than the other two options. Many students who select the general entomology concentration plan to pursue graduate study in entomology. The economic plant protection concentration involves the biology of pests (insects, fungi, bacteria, viruses, nematodes, weeds, and vertebrates), with special reference to their interactions with economic plants; the principles of integrated pest management; and sustainable agriculture. The natural ecosystem protection concentration involves the biology, ecology, and management of nonagricultural, long-term aquatic and terrestrial ecosystems, and the use of technology and social systems to manage them. Students are encouraged to select the concentration best suited to their interests and career objectives.

There are opportunities for undergraduate Entomology students to carry out research projects in many laboratories. Students may also gain work experience in the diverse areas of entomology through employment during the academic year and summer.

Requirements for the Bachelor of Science Degree in Entomology

1. The University requirements for bachelor's degrees as described in the Undergraduate Education section of this catalog; 120 credits, including general elective credits, are required for the Bachelor of Science degree in Entomology.

   The University's Tier II writing requirement for the Entomology major is met by completing Entomology 470 or 478. Those courses may be counted toward the major requirements.

   Students who are enrolled in the Entomology major concentrations may complete an alternative track to Integrative Studies in Biological and Physical Sciences by completing Entomology’s mathematics and chemistry requirements and Biological Science 111. These courses meet the laboratory requirement.

2. The requirements of the College of Agriculture and Natural Resources for the Bachelor of Science degree.

   The credits earned in certain courses referenced in requirement 3. below may be counted toward College requirements as appropriate.

3. The following major requirements:

   a. All of the following courses (36 credits):

      | Course                                      | Credits |
      |--------------------------------------------|---------|
      | BS 110 Organisms and Populations           | 4       |
      | BS 111 Cells and Molecules                 | 3       |
      | CEM 141 General Chemistry                  | 4       |
      | CEM 142 General and Inorganic Chemistry    | 3       |
      | CEM 161 Chemistry Laboratory I             | 1       |
      | CSE 101 Computing Concepts and Competencies| 3       |
      | ENT 404 Insects: Success in Biodiversity   | 4       |
      | MTH 124 Survey of Calculus I               | 3       |
      | PHY 231 Introductory Physics I             | 3       |
      | PHY 232 Introductory Physics II            | 3       |
      | PHY 251 Introductory Physics Laboratory I  | 1       |
      | PHY 252 Introductory Physics Laboratory II | 1       |
      | MTH 126 Survey of Calculus II              | 3       |
      | STT 421 Statistics I                       | 3       |

   b. One of the following three concentrations:

      (1) **General Entomology** (22 credits):

         (a) A minimum of 10 credits in courses in the biological sciences other than Biological Science 110 and 111 as approved by the student’s academic adviser.

         (b) A minimum of 12 courses in Entomology other than Entomology 404, 470 and 478 as approved by the student’s academic adviser.

      (2) **Economic Plant Protection** (30 credits):

         (a) All of the following courses (21 credits):

            | Course                                      | Credits |
            |--------------------------------------------|---------|
            | BOT 301 Introductory Plant Physiology       | 3       |
            | BOT 405 Introductory Plant Pathology        | 4       |
            | CEM 143 Survey of Organic Chemistry         | 4       |
            | ENT 442 Concepts of Biological Information Systems | 3   |
            | ENT 477 Pest Management I: Pesticides in Management System | 3 |
            | ZOL 341 Fundamental Genetics                | 4       |

         (b) One of the following courses: (3 credits):

            | Course                                      | Credits |
            |--------------------------------------------|---------|
            | BOT 218 Plants of Michigan                  | 3       |
            | BOT 418 Plant Systems                      | 3       |

         (c) One of the following courses: (3 credits):

            | Course                                      | Credits |
            |--------------------------------------------|---------|
            | BOT 402 Biology of Fungi                   | 3       |
            | CSS 402 Principles of Weed Science         | 3       |
            | FW 328 Vertebrate Pest Control             | 3       |

         (d) One of the following courses: (3 credits):

            | Course                                      | Credits |
            |--------------------------------------------|---------|
            | CSS 101 Introduction to Crop Science       | 3       |
            | FOR 202 Introduction to Forestry           | 3       |
            | HRT 203 Principles of Horticulture I       | 2       |

      (3) **Natural Ecosystem Protection** (32 credits):

         (a) All of the following courses (32 credits):

            | Course                                      | Credits |
            |--------------------------------------------|---------|
            | BOT 301 Introductory Plant Physiology       | 3       |
            | BOT 423 Wetland Plants and Algae           | 4       |
            | CEM 143 Survey of Organic Chemistry         | 4       |
            | CSS 210 Fundamentals of Soil and Landscape Science | 3 |
            | ENT 422 Aquatic Entomology                 | 3       |
            | ENT 442 Concepts of Biological Information Systems | 3 |
            | ZOL 306 Invertebrate Biology               | 4       |
            | ZOL 341 Fundamental Genetics               | 4       |
            | ZOL 355 Ecology                            | 3       |

         (b) One of the following courses: (3 credits):

            | Course                                      | Credits |
            |--------------------------------------------|---------|
            | BOT 218 Plants of Michigan                 | 3       |
            | BOT 418 Plant Systems                     | 3       |

         (c) One of the following courses: (3 credits):

            | Course                                      | Credits |
            |--------------------------------------------|---------|
            | ENT 470 General Nematology (W)             | 3       |
            | ENT 478 Pest Management II: Biological Components of Management Systems (W) | 3 |

   d. The following course: (4 credits):

      | Course                                      | Credits |
      |--------------------------------------------|---------|
      | LBS 492 Senior Seminar                     | 4       |
Upon completion of the required courses for one of the three concentrations referenced above, the student should contact the Department of Entomology and request certification for the completion of the concentration. After the certification is approved by the Dean of the College of Agriculture and Natural Resources, the Office of the Registrar will enter on the student’s academic record the name of the concentration and the date that it was completed. This certification will appear on the student’s transcript.

GRADUATE STUDY
The Department of Entomology offers Master of Science and Doctor of Philosophy degree programs in entomology. It also offers a Professional Master of Science degree in Integrated Pest Management (Plan B). The department offers a Doctor of Philosophy degree program in entomology—environmental toxicology. Many of the courses offered by the department are of significance to other disciplines in the biological and agricultural sciences in the College of Natural Science and College of Agriculture and Natural Resources section of this catalog.

The Department of Entomology is affiliated with the Doctor of Philosophy degree program that involves ecology, evolutionary biology, and behavior. For information about a Doctor of Philosophy degree program, the student’s major professor, and the student’s guidance committee, refer to the statement on the doctoral program in ecology, evolutionary biology, and behavior.

Students who are enrolled in Master of Science degree programs in the Department of Entomology may elect specializations in ecology, evolutionary biology, and behavior and in environmental toxicology. For additional information, refer to the statement on the specialization in ecology, evolutionary biology, and behavior and to the Graduate Specialization in Environmental Toxicology statement.

Students who are enrolled in Master of Science degree programs in the Department of Entomology may elect a specialization in Food Safety. For additional information, refer to the statement on the specialization in the College of Veterinary Medicine section of this catalog.

ENTOMOLOGY
Faculty and facilities are available for study in many subject areas, including apiculture and pollination, aquatic systems, behavior, insect biochemistry, biological control, bionomics, ecology, insect economics, forest entomology, medical entomology, morphology, nematology, population dynamics, insect physiology, pest management on many kinds of crops, plant disease vectors, systematics, systems science, environmental and analytical toxicology, and urban and ornamental entomology. Combinations of many of these specialized subject areas are necessary for all programs of study. Regardless of specialization, the student’s education must provide broad training in related sciences.

Graduate students in entomology look forward chiefly to college teaching; research work in some of the many areas where insects affect our crops and our lives; professional employment with state, federal, or private agencies or companies; or employment as pest management consultants.

Master of Science
In addition to meeting the requirements of the University and of the College of Agriculture and Natural Resources, students must meet the requirements specified below.

Admission
A bachelor’s degree with a 3.00 grade-point average for the last two years of study is required for admission to the master’s program. Although the applicant need not have an undergraduate major in entomology for regular admission, training should have been received in the physical and biological sciences equivalent to that required of an undergraduate entomology major at Michigan State University. Graduate Record Examination General Test scores are required. Applicants with a good academic record but with deficiencies in physics, chemistry, mathematics, or the biological sciences may be accepted on a provisional basis until deficiencies have been rectified by collateral course work.

Requirements for the Master of Science Degree in Entomology
Both Plan A (with thesis) and Plan B (without thesis) are available, but students planning to earn a doctoral degree must follow Plan A. The student must complete a total of 30 credits for the degree under either Plan A or Plan B. Participation in the department’s teaching program is also required.

Courses and thesis topic are planned on an individual basis by the student, the student’s major professor, and the student’s guidance committee. The following courses must be a part of the undergraduate or graduate program: a general entomology course, systematics of adults or immatures, insect physiology or molecular entomology, and 2 credits of graduate seminar, Entomology 812. A final oral examination covering course work, research, and philosophical issues is required.

INTEGRATED PEST MANAGEMENT

Master of Science
The objective of this program is to train professionals in Integrated Pest Management with the business management and communication skills necessary for public and private sector employment. It is designed for students with bachelor’s degrees in biological or agricultural sciences or for working professionals who wish to advance or change their careers.

Admission
In addition to meeting the requirements of the University and the College of Agriculture and Natural Resources, applicants are expected to have knowledge of computer applications and appropriate curricular background in crop protection-related fields and crop production-related fields. Applicants with good academic records who lack the expected curricular backgrounds may be admitted on a provisional basis but will be expected to take collateral course work.

Requirements for the Master of Science Degree in Integrated Pest Management
In addition to meeting the requirements of the University and the College of Agriculture and Natural Resources, the student must complete a total of 31 credits for the degree under Plan B (without thesis).

Students will complete a total of three 1 credit seminars, focusing on standard topics for this program.

- ** Requirements for the Doctor of Philosophy Degree in Entomology**

A specified number of credits is not required, but early in the student's program the guidance committee, in consultation with the student, develops a list of proposed courses and a tentative dissertation subject. The student is expected to acquire a broad knowledge of entomology. The following courses must be a part of the undergraduate or graduate program: a general entomology course, systematics of adults or immatures, insect physiology or molecular entomology, insect ecology, evolution and conservation, 3 credits of Entomology 812 Graduate Seminar, and one course selected from a list of courses approved by the Department.

At least two courses must be from areas other than Entomology. The student's guidance committee may approve other courses to meet this requirement.

### Doctor of Philosophy

The Department of Entomology aspires to develop not only capable entomologists but also capable scholars. Scholarly potential is sought in the prospective student, and course and research programs are designed to round out the student's knowledge and bring it to the stage of development where the student can work creatively in the field.

In addition to meeting the requirements of the University and of the College of Agriculture and Natural Resources, students must meet the requirements specified below.

### Admission

A master's degree including a thesis in an appropriate field of study is required. Subject matter training should be in the same general areas as required for admission to the Master of Science degree program in entomology. The student's past record must indicate maturity, reliability, and scholarly potential of a high order.

### Requirements for the Doctor of Philosophy Degree in Entomology

A specified number of credits is not required, but early in the student's program the guidance committee, in consultation with the student, develops a list of proposed courses and a tentative dissertation subject. The student is expected to acquire a broad knowledge of entomology. The following courses must be a part of the undergraduate or graduate program: a general entomology course, systematics of adults or immatures, insect physiology or molecular entomology, insect ecology, evolution and conservation, 3 credits of Entomology 812 Graduate Seminar, and one course selected from a list of courses approved by the Department.

The student must pass a doctoral qualification examination which primarily consists of the defense of a dissertation proposal. Written and oral doctoral comprehensive examinations are required on philosophical issues and in the three or more areas of study specified by the guidance committee. Participation in the department's teaching program is also required.

In addition to the program developed by the guidance committee for a research specialty, the student must acquire an area of knowledge separate and distinct from those research competencies. The acquisition of this knowledge means a minimum of 10 credits or its equivalent. The area selected must be agreed upon, unanimously, by the guidance committee and the student.

### ENTOMOLOGY—ENVIRONMENTAL TOXICOLOGY

#### Doctor of Philosophy

For information about the Doctor of Philosophy degree program in entomology—environmental toxicology, refer to the statement on Multidisciplinary Doctoral Programs in Environmental Toxicology in the Graduate Education section of this catalog.
 Majors in the Department of Fisheries and Wildlife prepare for rewarding careers as fisheries and wildlife technicians, biologists, managers, naturalists, and applied ecologists. Others may choose to pursue related careers as conservation officers, environmental consultants or natural resource administrators. Employment is generally found with state and federal natural resource agencies such as the Michigan Department of Natural Resources, the U.S. Fish and Wildlife Service, and the National Park Service. There are also excellent job opportunities with private companies such as International Paper and non-profit organizations such as The Nature Conservancy or Trout Unlimited as well as many universities and colleges.

The undergraduate program in the Department of Fisheries and Wildlife at Michigan State University is nationally and internationally recognized. The program provides a strong base in the foundational and applied sciences of natural resource management. The program is designed to develop understanding of the cultural, recreational, and economic values of biological resources. The department offers a core of required courses and allows for development of individual interests through electives. Students can use their electives to explore the natural resources of a foreign country through study abroad, pursue an MSU specialization, add another major or second degree, or take a variety of MSU courses they find interesting.

Students who complete the requirements for the fisheries and wildlife major and choose elective courses appropriately can also satisfy requirements for certification by the American Fisheries Society as an associate fisheries scientist, by The Wildlife Society as an associate wildlife biologist, or by the Society of Wetland Scientists as a wetland professional-in-training.

Students who are enrolled in the Bachelor of Science degree program with a major in fisheries and wildlife may elect a specialization in agricultural and natural resources biotechnology, aquaculture, connected learning, conservation and environmental law enforcement, environmental economics, environmental studies, marine ecosystem management, museum studies, or spatial information processing. For additional information on any of these specializations, refer to the General Index section in this publication or visit http://www.reg.msu.edu/UCC/specializations.asp.

Requirements for the Bachelor of Science Degree in Fisheries and Wildlife

1. The University requirements for bachelor’s degrees as described in the Undergraduate Education section of this catalog; 120 credits, including general elective credits, are required for the Bachelor of Science degree in Fisheries and Wildlife. The Tier I writing requirement for the Fisheries and Wildlife major is met by completing all of the following courses: Fisheries and Wildlife 410, 412, 414, and 434. Those courses are referenced in item 3. a. below. Students who are enrolled in the Fisheries and Wildlife major leading to the Bachelor of Science degree in the Department of Fisheries and Wildlife may complete an alternative track to Integrative Studies in Biological and Physical Sciences that consists of the following courses: Biological Science 110 and Chemistry 141 and 161. The completion of Biological Science 110 and Chemistry 161 satisfies the laboratory requirement. Biological Science 110 and Chemistry 141 and 161 may be counted toward both the alternative track and the requirements for the major referenced in item 3. b. below. The completion of the College of Agriculture and Natural Resources mathematics requirement may also satisfy the University mathematics requirement.

2. The requirements of the College of Agriculture and Natural Resources for the Bachelor of Science degree.

Certain courses referenced in requirement 3. b. below may be counted toward College requirements as appropriate. The completion of Mathematics 116 satisfies the College’s mathematics requirement.

3. The following requirements for the major:

| CREDITS | BS 110 Organisms and Populations | 4 |
| CREDITS | BS 111 Cells and Molecules | 3 |
| CREDITS | CEM 141 General Chemistry | 4 |
| CREDITS | CEM 143 Survey of Organic Chemistry | 4 |
| CREDITS | CEM 161 Chemistry Laboratory I | 1 |
| CREDITS | CSS 210 Fundamentals of Soil and Landscape Science | 3 |
| CREDITS | FW 100 Introduction to Fisheries and Wildlife | 3 |
| CREDITS | FW 324 Wildlife Biometry | 3 |
| CREDITS | FW 364 Ecological Problem Solving | 3 |

AGRICULTURE AND NATURAL RESOURCES
Department of Fisheries and Wildlife

SPECIALIZATION IN AQUACULTURE

The Specialization in Aquaculture is designed to provide students with specialized knowledge in aquaculture, agricultural sciences, fisheries biology, agribusiness planning and management, food processing, and marketing in preparation for careers in aquaculture. Students will become aware of technical knowledge about careers in aquaculture and apply this awareness in their career decision-making.

The Specialization in Aquaculture, which is administered by the Department of Fisheries and Wildlife within the College of Agriculture and Natural Resources, is available as an elective to students who are enrolled in bachelor’s degree programs at Michigan State University.

With the approval of the department or school and college that administers the student’s degree program, courses that are used to satisfy the requirements for the specialization may also be used to satisfy the requirements for the bachelor’s degree. The student’s program of study must be approved by the student’s academic adviser for the specialization.

Requirements for the Specialization in Aquaculture

| CREDITS | FW 275 Seafood System Management | 3 |
| CREDITS | FW 475 Aquaculture | 3 |

FW 410 Upland Ecosystem Management 3
FW 412 Wetland Ecosystem Management 3
FW 414 Aquatic Ecosystem Management 3
FW 424 Population Analysis and Management 4
FW 434 Human Dimensions of Fisheries and Wildlife Management 3

MTH 124 Survey of Calculus I 3
PHY 231 Introductory Physics I 3
ZOL 355 Ecology 3
ZOL 355L Ecology Laboratory 1
b. One of the following courses: 3 or 4
FOR 204 Forest Vegetation 4
PLB 218 Plants of Michigan 3
PLB 418 Plant Systematics 3
PLB 423 Wetland Plants and Algae 4
c. One of the following courses: 4
ZOL 328 Comparative Anatomy and Biology of Vertebrates 4
ZOL 341 Fundamental Genetics 4
ZOL 483 Environmental Physiology 4
d. One of the following courses: 3 or 4
ENT 422 Aquatic Entomology 3
FW 462 Ecology and Management of Invertebrates 4
FW 471 Ichthyology 4
ZOL 360 Biology of Birds 4
ZOL 361 Michigan Biodiversity 4
ZOL 365 Biology of Mammals 4
ZOL 384 Biology of Amphibians and Reptiles 3

The student must:
1. Complete both of the following courses (6 credits):
FW 275 Seafood System Management 3
FW 475 Aquaculture 3
2. Complete 14 credits selected from three of the four following areas (14 credits):
Organismal Biology
ANS 313 Principles of Animal Feeding and Nutrition 4
ANS 314 Genetic Improvement of Domestic Animals 4
FW 473 Environmental Fish Physiology 3
HNF 311 Principles of Human Nutrition 3
ZOL 341 Fundamental Genetics 4
ZOL 483 Environmental Physiology 4
Food Systems
ABM 222 Agribusiness and Food Industry Sales (W) 3
ABM 435 Financial Management in the Agri-Food System 3
ANS 210 Animal Products 3
ANS 407 Food and Animal Toxicology 3
FSC 211 Principles of Food Science 3
FSC 433 Food Processing: Muscle Foods 3
Systems Management
ABM 130 Farm Management I 3
ABM 430 Farm Management II 3
ATM 431 Irrigation, Drainage and Erosion Control Systems 3
BE 230 Principles of Biosystems Engineering 3
FW 472 Limnology 3
FW 474 Limnological and Fisheries Techniques 3
ZOL 389 Introduction to Zoo and Aquarium Sciences 3
Internship in Aquaculture
FW 493 Professional Internship in Fisheries and Wildlife 1 to 3

141
Upon completion of the requirements for the Specialization in Aquaculture, the student should contact the Chairperson of the Department of Fisheries and Wildlife and request certification for the completion of the specialization. After the certification is approved by the Chairperson of the Department of Fisheries and Wildlife and the Associate Dean of the College of Agriculture and Natural Resources, the Office of the Registrar will enter on the student’s academic record the name of the specialization and the date that it was completed. This certification will appear on the student’s transcript.

SPECIALIZATION IN CONSERVATION AND ENVIRONMENTAL LAW ENFORCEMENT

The Specialization in Conservation and Environmental Law Enforcement is designed to combine the natural resource expertise of the fisheries and wildlife, forestry, parks, recreation and tourism, and resource development programs, with the law enforcement expertise of the criminal justice program to serve those students with career interests in conservation or environmental law enforcement. The specialization is available as an elective to students who are enrolled in bachelor’s degree programs in criminal justice, fisheries and wildlife, forestry, park, recreation and tourism resources, and resource development. The specialization is administered by the Department of Fisheries and Wildlife.

Students who are interested in enrolling should apply to the Department of Fisheries and Wildlife for acceptance.

With the approval of the department and college that administer the student’s degree program, courses that are used to satisfy the requirements for the specialization may also be used to satisfy the requirements for the bachelor’s degree.

Requirements for the Specialization in Conservation and Environmental Law Enforcement

The student must complete:

Upon completion of the requirements for the Specialization in Conservation and Environmental Law Enforcement, the student should contact the Chairperson of the Department of Fisheries and Wildlife and request certification for the completion of the specialization. After the certification is approved by the Chairperson of the Department of Fisheries and Wildlife and the Director of Academic Affairs of the College of Agriculture and Natural Resources, the Office of the Registrar will enter on the student’s academic record the name of the specialization and the date that it was completed. This certification will appear on the student’s transcript.

SPECIALIZATION IN MARINE ECOSYSTEM MANAGEMENT

The Specialization in Marine Ecosystem Management is designed to provide students with a fundamental background in ecosystem management of marine natural resources. Students gain insight and experience in marine management issues relative to estuarine, coastal, and open-water marine ecosystems from the perspective of habitat, biota and human resource users. Students are also exposed to the management skills necessary to recognize and use effective techniques to conserve, preserve and restore marine ecosystem integrity for the benefit of society. This unique management emphasis serves the career interests of students well as they pursue positions in the marine sciences.

The Specialization in Marine Ecosystem Management is available as an elective to students who are enrolled in Bachelor of Science degree programs with majors in Fisheries and Wildlife, Lyman Briggs School, Resource Development, and Zoology. The specialization is administered by the Department of Fisheries and Wildlife. With the approval of the department and college that administer the student’s degree program, courses that are used to satisfy the requirements for the specialization may also be used to satisfy the requirements for the bachelor’s degree.

Students who plan to complete the requirements for the marine ecosystem management specialization should contact the undergraduate advisor for fisheries and wildlife in the Department of Fisheries and Wildlife.

Requirements for the Specialization in Marine Ecosystem Management

The student must complete:

Upon completion of the requirements for the Specialization in Marine Ecosystem Management, the students should contact the Chairperson of the Department of Fisheries and Wildlife and request certification for the completion of the specialization. After the certification is approved by the Chairperson of the Department of Fisheries and Wildlife and the Director of Academic Affairs of the College of Agriculture and Natural Resources, the Office of the Registrar will enter on the student’s academic record the name of the specialization and the date that it was completed. This certification will appear on the student’s transcript.

**TEACHER CERTIFICATION OPTIONS**

A environmental science disciplinary minor is available for teacher certification.

Students who elect the environmental science disciplinary minor, must contact the Department of Fisheries and Wildlife.

For additional information, refer to the statement on TEACHER CERTIFICATION in the Department of Teacher Education section of this catalog.

**GRADUATE STUDY**

The graduate program in the Department of Fisheries and Wildlife at MSU is nationally and internationally recognized. Our faculty are among the top professionals in their fields, and our programs are at the forefront of teaching management policy, conservation biology, human dimensions of natural resources management, as well as fish and wildlife biology, ecology, and management.

Nationally and internationally recognized scientists visit the department, interacting with the faculty and students and presenting seminars. Graduate students have opportunities to attend regional and national professional meetings, such as the Midwest Fish and Wildlife Conference, the annual conferences of the American Fisheries Society and The Wildlife Society, and The North American Wildlife and Natural Resources Conference, in addition to meetings of the Michigan Chapter of the American Fisheries Society and The Wildlife Society.

The Department of Fisheries and Wildlife brings together a diverse group of related basic and applied sciences. Faculty are actively engaged in teaching, research, and outreach. Major areas of interest include: wildlife ecology and management; fisheries science and management; limnology (including water quality and water pollution biology); conservation biology; environmental management; aquaculture; human dimensions of resource management; wetland ecology and management; stream ecology; wildlife disease ecology and conservation medicine; and ecosystem and population modeling.

In addition to the major areas of interest, fisheries and wildlife graduate students can develop their own program of study under the direction of major professors within the department and guidance committees. For students who wish to pursue programs in the social, economic, geographic, or education-related aspects of fisheries and wildlife management, interdisciplinary programs are offered. Interaction with many related departments and colleges at MSU, as well as with state and federal agencies, allow for both depth and breadth in research and academic programs.

The Department of Fisheries and Wildlife offers Master of Science and Doctor of Philosophy degree programs in fisheries and wildlife. The department also offers a Doctor of Philosophy degree program in fisheries and wildlife—environmental toxicology.

Students in the Master of Science degree program in fisheries and wildlife are eligible for the dual JD program with Michigan State University - College of Law.

The Department of Fisheries and Wildlife is affiliated with the Doctor of Philosophy degree program with a major in ecology, evolutionary biology and behavior. For information about a Doctor of Philosophy degree program that involves ecology, evolutionary biology and behavior and a major in the Department of Fisheries and Wildlife, refer to the statement on the doctoral program in ecology, evolutionary biology and behavior in the *College of Natural Science* section of this catalog.

Students who are enrolled in the Master of Science degree program in the Department of Fisheries and Wildlife may elect specializations in ecology, evolutionary biology and behavior and in environmental toxicology. For additional information, refer to the statement on the Specialization in Ecology, Evolutionary Biology and Behavior in the *College of Natural Science* section of this catalog and to the *Graduate Specialization in Environmental Toxicology* statement.

Students who are enrolled in Master of Science and Doctor of Philosophy degree programs in the Department of Fisheries and Wildlife may elect specializations in environmental and resource economics, fish and wildlife disease ecology and conservation medicine, and gender, justice and environmental change. For additional information, refer to the statements on *Interdepartmental Graduate Specializations in Environmental and Resource Economics*, *Graduate Specialization in Fish and Wildlife Disease Ecology and Conservation Medicine*, and the *Graduate Specialization in Gender, Justice, and Environmental Change* in this catalog.

**FISHERIES AND WILDLIFE**

Programs of study are based on the academic preparation, interests, and career goals of individual students. Although individual students' programs vary, all graduate programs in fisheries and wildlife are designed to provide:

1. Broad fundamental preparation in the ecological sciences.
2. Preparation in one of the areas of specialization within the field of fisheries and wildlife.
3. A foundation for careers in administration, research, management, teaching, or extension.

The department offers the following areas of specialization within the field of fisheries and wildlife: conservation biology, restoration ecology, human dimensions, fisheries ecology and management, wildlife ecology and management, population dynamics and modeling, limnology, aquaculture, environmental management, environmental education, and environmental toxicology.

Cooperation with other colleges and departments, graduate students in the Department of Fisheries and Wildlife may be involved in research in the nutrition, pathology, and physiology of fish and wildlife.

**Master of Science**

In addition to meeting the requirements of the University and of College of Agriculture and Natural Resources, the student must meet the requirements specified below.

**Admission**

Admission to a master's program requires prior completion of an undergraduate major in a biological or other appropriate science with course work appropriate to support the graduate program. Students lacking sufficient courses may be admitted provisionally until such deficiencies are removed by completing collateral courses. Scores on the Graduate Record Examination General Test are required. The Subject Test in Biology is recommended.
Requirements for the Master of Science Degree in Fisheries and Wildlife

The student may elect either Plan A (with thesis) or Plan B (without thesis). A total of 30 credits is required for the degree under either Plan A or Plan B. The student and the major professor plan a program of study that includes courses related to one of the areas of specialization within the field of fisheries and wildlife referenced above and three credits of Fisheries and Wildlife 893. The program must be approved by the student's guidance committee.

Doctor of Philosophy

In addition to meeting the requirements of the University and of College of Agriculture and Natural Resources, the student must meet the requirements specified below.

Admission

Applicants for a doctoral program should have completed a Bachelor of Science degree and a Master of Science degree in a biological or other appropriate science. Additional background in mathematics, chemistry, botany, and zoology is desirable. Scores on the Graduate Record Examination General Test are required. The Subject Test in Biology is recommended.

Requirements for the Doctor of Philosophy Degree in Fisheries and Wildlife

The student and the major professor plan a program of study that includes courses related to one of the areas of specialization within the field of fisheries and wildlife referenced above and three credits of Fisheries and Wildlife 893. The program must be approved by the student's guidance committee.

ENVIRONMENTAL TOXICOLOGY

Doctor of Philosophy

For information about the Doctor of Philosophy degree program in fisheries and wildlife—environmental toxicology, refer to the statement on Multidisciplinary Doctoral Programs in Environmental Toxicology in the Graduate Education section of this catalog.

DEPARTMENT of FOOD SCIENCE and HUMAN NUTRITION

Gale M. Strasburg, Acting Chairperson

The Department of Food Science and Human Nutrition is administered jointly by the College of Agriculture and Natural Resources and the College of Natural Science.

UNDERGRADUATE PROGRAMS

The department offers Bachelor of Science degree programs with majors in dietetics and food science through the College of Agriculture and Natural Resources. Those programs are described below.

The department also offers a Bachelor of Science degree program with a major in nutritional sciences through the College of Natural Science. For information about that program, refer to the statement on the Department of Food Science and Human Nutrition in the College of Natural Science section of this catalog.

Students who are enrolled in the Bachelor of Science degree program with a major in food science may elect a Specialization in Agricultural and Natural Resources Biotechnology. For additional information, refer to the Specialization in Agricultural and Natural Resources Biotechnology statement.

DIETETICS

The undergraduate program in dietetics has been approved by the American Dietetic Association (ADA) as a Didactic Program that meets the minimum academic requirements for professionally qualified dietitians.

The undergraduate program in dietetics is designed so that supporting disciplines provide a knowledge base prerequisite to the professional courses. Course offerings are sequenced to build upon previous knowledge and provide increasingly complex experiences. The student is expected to acquire approximately equal expertise in nutritional assessment and care and in foodservice management systems.

Verification of successful completion of the ADA approved minimum academic requirements is the responsibility of the Dietetic Program Director in the Department of Food Science and Human Nutrition.

Persons who wish to receive a final Verification Statement for the fulfillment of ADA approved minimum academic requirements from Michigan State University, but who have not completed a Bachelor of Science degree with a Dietetics major at MSU, must complete a minimum of 10 credits in 300—400 level courses in dietetics at MSU with a minimum grade of 2.0 or better in each course.

Eligibility for the Registration Examination for Dietitians is determined by verification of successful completion of an Approved ADA Didactic Program in Dietetics and one of the following supervised practice experiences: ADA Accredited Dietetic Internship, ADA Accredited Coordinated Program, or ADA Approved Preprofessional Practice Program. Dietetic registration, as administered by the Commission on Dietetic Registration, is a requirement of most positions for professional dietitians.

Requirements for the Bachelor of Science Degree in Dietetics

1. The University requirements for bachelor’s degrees as described in the Undergraduate Education section of this catalog.

The University's Tier II writing requirement for the Dietetics major is met by completing Human Nutrition and Foods 300 and 466. Those courses are referenced in item 3. a. below.

Students who are enrolled in the Dietetics major leading to the Bachelor of Science degree in the Department of Food Science and Human Nutrition may complete an alternative track to Integrative Studies in Biological and Physical Sciences that consists of the following courses: Biochemistry 200 or Physiology 250; Chemistry 141, 143, and 161. The completion of Chemistry 143 and 161 satisfies the laboratory requirement.
Food Chemistry. This concentration is designed to provide students with a firm foundation for analyzing and understanding the chemical basis for changes in foods which take place during harvest, processing, storage, and consumption. Students who complete this concentration may pursue research and development careers with food companies or government laboratories or may pursue graduate study in food science or related areas.

Food Packaging. This concentration is designed to prepare students for careers in the food industry with an emphasis in food packaging. The concentration focuses on the design, use, and evaluation of food packaging materials and the effect of packaging materials on the shelf life of food. Students who complete this concentration may pursue graduate study in packaging or food science.

Food Safety. This concentration allows students to focus on the problems and solutions necessary to enhance the safety of our food supply. Both microbial and chemical food safety issues are addressed. Course work focuses on many topics including chemistry, toxicology, and microbiology as well as the legal aspects of food safety. Students who complete this concentration may hold a variety of positions within the food industry and government or may pursue graduate study in food science or microbiology.

Food Technology. This concentration focuses on food processing methods and their effect on food quality and process characteristics. Students who complete this concentration may pursue careers in production supervision, quality assurance, inspection, product development, and process development. They may also pursue graduate study to prepare for positions in research, production, and management in the food industry, government, or universities.

Requirements for the Bachelor of Science Degree in Food Science

1. The University requirements for bachelor's degrees as described in the Undergraduate Education section of this catalog; 120 credits, including general elective credits, are required for the Bachelor of Science degree in Food Science.

The University's Tier II writing requirement for the Food Science major is met by completing all of the following courses: Food Science 325, 402, 440, 441, 455, 470. Those courses are referenced in item 3.a. below.

Students who are enrolled in the Food Science major leading to the Bachelor of Science degree in the Department of Food Science and Human Nutrition may complete an alternative track to Integrative Studies in Biological and Physical Sciences that consists of the following courses: Biological Science 111, Chemistry 161 and 162, and Physics 231. The completion of Chemistry 161 and 162 satisfies the laboratory requirement. Biological Science 111, Chemistry 161 and 162 and Physics 231 may be counted toward both the alternative track and the requirements for the major referenced in item 3. below.

The completion of the College of Agriculture and Natural Resources mathematics requirement may also satisfy the University mathematics requirement.

2. The requirements of the College of Agriculture and Natural Resources for the Bachelor of Science degree.

Certain courses referenced in requirement 3. below may be counted toward College requirements as appropriate. The completion of Mathematics 124 satisfies the College's mathematics requirement.

3. The following requirements for the major:

a. All of the following courses: .......................... 49
BE 329 Fundamentals of Food Engineering ................. 3
BS 111 Cells and Molecules .................................. 3
CEM 141 General Chemistry .................................. 4
CEM 142 General and Inorganic Chemistry .................. 3
CEM 161 Chemistry Laboratory I .......................... 3
CEM 162 Chemistry Laboratory II ......................... 1
FSC 211 Principles of Food Science ...................... 3
FSC 325 Food Processing: Unit Operations .............. 3
FSC 401 Food Chemistry ................................... 3
FSC 402 Food Chemistry Laboratory ..................... 1
FSC 440 Food Microbiology ................................ 1
FSC 441 Food Microbiology Laboratory .................. 2
FSC 455 Food Analysis ................................... 3
FSC 470 Integrated Approaches to Food Product Development ........................................... 3
HNF 311 Principles of Human Nutrition .................. 3
MTH 124 Survey of Calculus I ............................ 3
MTH 126 Survey of Calculus II ......................... 3
PHY 231 Introductory Physics I ......................... 3

b. One of the following six concentrations: ................ 26 to 30

FOOD SCIENCE

Graduates with a Bachelor of Science degree in food science may be employed by food and allied industries, federal and state governments, and universities to work at the interface between the production and delivery of food. The required courses stress the principles of food preservation and the application of scientific principles to control and enhance the flavor, color, texture, nutritive value, and safety of foods.

In addition to the core program, students in food science must complete one of the following interdisciplinary concentrations that are designed to provide additional breadth and depth: food biotechnology, food business and industry, food chemistry, food packaging, food safety, or food technology.

Food Biotechnology. The food biotechnology concentration is designed for students with an interest in applying an understanding of biotechnology to improving the quantity, quality, and safety of the food supply. Students who complete this concentration may be employed in the food industry or may pursue graduate study in biotechnology, food science, or related areas.

Food Business and Industry. This concentration is designed for students who are interested in working for food or food-related businesses, where a knowledge of both food science and of food business management, economics, and marketing is important. Students who complete this concentration may pursue careers in manufacturing management, technical sales, food product marketing, or similar areas or may pursue graduate study in business.
Food Biotechnology (28 or 29 credits):
(1) All of the following courses (22 credits):
   BMB 401 Basic Biochemistry ........................................ 4
   CEM 251 Organic Chemistry I ........................................ 3
   CEM 252 Organic Chemistry II ..................................... 3
   CSS 451 Cellular and Molecular Principles and Techniques for Plant Sciences ........................................ 4
   MMG 205 Allied Health Microbiology ................................ 3
   MMG 206 Allied Health Microbiology Laboratory ................... 1
   STT 201 Statistical Methods ........................................ 4
   STT 315 Introduction to Probability and Statistics for Business ........................................ 3
(2) One of the following courses (3 or 4 credits):
   CSS 201 Introduction to Plant Genetics ................................ 3
   ZOL 341 Fundamental Genetics ...................................... 3
(3) The following course (3 credits):
   HRT 486 Biotechnology in Agriculture: Applications and Ethical Issues ........................................ 3

Food Business and Industry (27 credits):
(1) All of the following courses (21 credits):
   ACC 230 Survey of Accounting Concepts ................................ 3
   BMB 200 Introduction to Biochemistry ................................ 4
   CEM 143 Survey of Organic Chemistry ................................ 4
   MMG 205 Allied Health Microbiology ................................ 3
   MMG 206 Allied Health Microbiology Laboratory ................... 1
   MSC 300 Managerial Marketing ....................................... 3
   STT 315 Introduction to Probability and Statistics for Business ........................................ 3
   Either Finance 311 or Agribusiness and Food Industry Sales (W) ........................................ 3
   ABM 435 Financial Management in the Agri-Food System ........... 3
   FI 311 Financial Management ......................................... 3
   FIM 339 Food Marketing Management ................................ 3
   MSC 302 Consumer and Organizational Buyer Behavior ............ 3
   Either Finance 311 or Agribusiness Management 435, but not both of those courses, may be used to satisfy requirement (2) for the Food Business and Industry concentration.

Food Chemistry (29 credits):
(1) All of the following courses (26 credits):
   BMB 401 Basic Biochemistry ........................................ 4
   CEM 251 Organic Chemistry I ........................................ 3
   CEM 252 Organic Chemistry II ..................................... 3
   CEM 255 Organic Chemistry Laboratory ............................ 2
   CEM 262 Quantitative Analysis ...................................... 3
   MMG 205 Allied Health Microbiology ................................ 3
   MMG 206 Allied Health Microbiology Laboratory ................... 1
   PHY 232 Introductory Physics I ...................................... 3
   STT 201 Statistical Methods ........................................ 4
(2) One of the following courses (3 credits):
   CEM 262 Quantitative Analysis ...................................... 3
   CEM 333 Instrumental Methods ..................................... 3
   CEM 334 Instrumental Methods ..................................... 3
   FSC 342 Food Safety and Hazard Analysis Critical Control Point Program ........................................ 3
   FSC 432 Food Processing: Muscle Foods ............................ 3
   STT 201 Statistical Methods ........................................ 4

Food Packaging (30 credits):
(1) All of the following courses:
   BMB 200 Introduction to Biochemistry ................................ 4
   CEM 143 Survey of Organic Chemistry ................................ 4
   MMG 205 Allied Health Microbiology ................................ 3
   MMG 206 Allied Health Microbiology Laboratory ................... 1
   PKG 101 Principles of Packaging .................................... 3
   PKG 222 Packaging with Glass and Metal ............................ 3
   PKG 322 Packaging with Paper and Paperboard ..................... 4
   PKG 323 Packaging with Plastics .................................... 4
   STT 201 Statistical Methods ........................................ 4
   STT 201 Statistical Methods ........................................ 4

Food Safety (27 credits):
(1) All of the following courses (21 credits):
   ANS 407 Food and Animal Toxicology ................................ 3
   CEM 251 Organic Chemistry I ........................................ 3
   FSC 412 Food Laws and Regulations ................................ 3
   MMG 301 Introductory Microbiology ............................... 3
   MMG 302 Introductory Microbiology Laboratory ................... 1
   STT 201 Statistical Methods ........................................ 4
(2) Six credits from the following courses:
   ANS 407 Toxicology Methods Laboratory ............................ 2
   ANS 417 Topics in Toxicology ....................................... 2
   MMG 425 Microbial Ecology ......................................... 3
   MMG 431 Microbial Genetics ........................................ 3
   MMG 445 Basic Biotechnology ....................................... 3
   PHM 450 Introduction to Chemical Toxicology ...................... 3

Food Technology (29 credits):
(1) All of the following courses (23 credits):
   BMB 200 Introduction to Biochemistry ................................ 4
   CEM 143 Survey of Organic Chemistry ................................ 4
   FSC 420 Quality Assurance ......................................... 4
   FSC 421 Food Laws and Regulations ................................ 3
   HNF 410 Sensory Assessment of Foods .............................. 3
   MMG 205 Allied Health Microbiology ................................ 3
   MMG 206 Allied Health Microbiology Laboratory ................... 1
   STT 201 Statistical Methods ........................................ 4
(2) Two of the following courses (6 credits):
   FSC 430 Food Processing: Fruits and Vegetables .................... 3
   FSC 431 Food Processing: Cereals .................................. 3
   FSC 432 Food Processing: Dairy Foods .............................. 3

SPECIALIZATION IN FOOD PROCESSING AND TECHNOLOGY

The Specialization in Food Processing and Technology is available as an elective to students who are enrolled in bachelor’s degree programs in the College of Agriculture and Natural Resources (other than the Bachelor of Science degree program with a major in food science), The School of Hospitality Business, the Department of Food Science and Human Nutrition in the College of Human Ecology, and the Department of Microbiology and Molecular Genetics and to students who are enrolled in the Environmental Biology/Microbiology and Microbiology coordinate majors in Lyman Briggs School. The Department of Food Science and Human Nutrition administers the specialization.

The primary educational objective of the specialization is to provide students with basic knowledge of food processing. The undergraduate coordinator for food science in the Department of Food Science and Human Nutrition is available to assist students in planning their programs of study for the specialization.

With the approval of the college and department that administers the student’s degree program, the courses that are used to satisfy the requirements for the specialization may also be used to satisfy the requirements for the bachelor’s degree.

Requirements for the Specialization in Food Processing and Technology

The student must complete:

1. One of the following courses: ........................................ 3 or 4
   ANS 210 Animal Products ........................................ 4
   FSC 211 Principles of Food Science ................................ 3

2. The following course: ........................................ 3
   FSC 325 Food Processing: Unit Operations ...................... 4

2. Three of the following courses: ..................................... 5 or 6
   FSC 342 Food Safety and Hazard Analysis Critical Control Point Program ........................................ 3
   FSC 420 Quality Assurance ......................................... 2
   FSC 421 Food Laws and Regulations ................................ 3

4. One of the following courses: ........................................ 3
   ANS 320 Muscle Foods ............................................. 3
   FSC 430 Food Processing: Fruits and Vegetables ................ 3
   FSC 431 Food Processing: Cereals .................................. 3
   FSC 432 Food Processing: Dairy Foods .............................. 3
   FSC 433 Food Processing: Muscle Foods ............................ 3

Upon completion of the requirements for the Specialization in Food Processing and Technology, the student should contact the Chairperson of the Department of Food Science and Human Nutrition and request certification for the completion of the specialization. After the certification is approved by the Chairperson of the Department of Food Science and Human Nutrition and the Director of Academic Affairs of the College of Agriculture and Natural Resources, the Office of the Registrar will enter on the student’s academic record the name of the specialization and the date that it was completed. This certification will appear on the student’s transcript.

GRADUATE STUDY

The Department of Food Science and Human Nutrition is administered jointly by the College of Agriculture and Natural Resources and the College of Natural Science. The department offers Master of Science and Doctor of Philosophy degree programs with majors in food science and a Doctor of Philosophy degree program with a major in food science—environmental toxicology through the College of Agriculture and Natural Resources. Those programs are described below. The department also offers Master of Science and Doctor of Philosophy degree
programs with majors in human nutrition and a Doctor of Philosophy degree program with a major in human nutrition - environmental toxicology through either the College of Agriculture and Natural Resources or the College of Natural Science. Those programs are also described below. In addition, the department offers programs for postdoctoral research.

Each graduate program in the Department of Food Science and Human Nutrition is designed to prepare the student to become a specialist in food science or human nutrition. Programs of study and research are flexible and are designed to meet the needs and objectives of individual students. Emphasis is placed on a sound educational program to develop a high degree of professional competence in a specific program area. Attendance and participation in seminars and participation in the teaching programs where appropriate are designed to broaden the student's background for future careers.

Students who are enrolled in Master of Science degree programs in the Department of Food Science and Human Nutrition may elect a Specialization in Environmental Toxicology. For additional information, refer to the Graduate Specialization in Environmental Toxicology statement.

Students who are enrolled in Master of Science degree programs in the Department of Food Science and Human Nutrition may elect a Specialization in Food Safety. For additional information, refer to the statement on the specialization in the College of Veterinary Medicine section of this catalog.

Students who are enrolled in Master of Science and Doctor of Philosophy degree programs in the Department of Food Science and Human Nutrition may elect specializations in infant studies. For additional information, refer to the statement on Interdepartmental Graduate Specializations in Infant Studies in the College of Social Science section of this catalog.

**FOOD SCIENCE**

In addition to meeting the requirements of the University and of the College of Agriculture and Natural Resources, students who are admitted to the master's and doctoral degree programs in food science must meet the requirements specified below.

A student who is admitted to a graduate program in food science is expected to have general, quantitative, and organic chemistry and biochemistry. In addition, preparation for graduate work should include courses in the biological and agricultural sciences, mathematics, physics, nutrition, engineering, or economics. A student with insufficient academic background may be required to complete collateral courses in addition to the courses that are required for the degree.

For the master's degree in food science, the student may elect either Plan A (with thesis) or Plan B (without thesis). A total of 30 credits is required for the degree under Plan A or Plan B.

**FOOD SCIENCE—ENVIRONMENTAL TOXICOLOGY**

**Doctor of Philosophy**

For information about the Doctor of Philosophy degree program in food science—environmental toxicology, refer to the statement on Multidisciplinary Doctoral Programs in Environmental Toxicology in the Graduate Education section of this catalog.

**HUMAN NUTRITION**

**Master of Science**

The M.S. degree program in human nutrition includes research, course work in advanced nutrition, statistics, seminars, and appropriate selections from one or more of the following areas: biochemistry, physiology, anthropology, pathology, genetics, psychology, or sociology. Students in this program must meet the requirements of the University and of the College of Agriculture and Natural Resources and the College of Natural Science.

**Doctor of Philosophy**

Students in the Ph.D. degree program in human nutrition may specialize in biochemical nutrition or in community nutrition. Course and research programs are designed to develop the student's scholarly potential. Major emphasis is placed upon the completion by the student of original research which should provide a significant contribution to knowledge.

Students in this program must meet the requirements of the University and of the College of Agriculture and Natural Resources and the College of Natural Science.

**HUMAN NUTRITION—ENVIRONMENTAL TOXICOLOGY**

**Doctor of Philosophy**

For information about the Doctor of Philosophy degree program in human nutrition—environmental toxicology, refer to the statement on Multidisciplinary Doctoral Programs in Environmental Toxicology in the Graduate Education section of this catalog.

**DEPARTMENT of FORESTRY**

**Daniel E. Keathley, Chairperson**

**UNDERGRADUATE PROGRAMS**

The Department of Forestry offers programs of instruction in forest resource management, urban and community forestry, wood products manufacturing and marketing, forest conservation and environmental studies, and forest sciences, all leading to the Bachelor of Science degree with a major in Forestry. Michigan State University's undergraduate forestry program is the oldest existing undergraduate forestry program in the United States. The forest resource management curriculum is accredited as a professional forestry program by the Society of American Foresters.

Students who are enrolled in the Bachelor of Science degree program with a major in Forestry may elect a specialization in agricultural and natural resources biotechnology. For additional information, refer to the Specialization in Agricultural and Natural Resources Biotechnology statement.
AGRICULTURE AND NATURAL RESOURCES
Department of Forestry

FORESTRY

Forest ecosystems, which comprise about one-third of the land area of the United States, are an extremely valuable resource that benefit society in many ways. They provide the renewable resource base for essential forest products, forage, and wildlife habitat. Forests stabilize stream flow, reduce soil erosion, floods, and avalanches, and are important in the regulation of air temperature in urban and rural settings. Forests also play a critical role in maintaining a proper carbon dioxide balance in the earth's atmosphere and are valued for their aesthetic enrichment of our lives and for the widespread opportunities for outdoor recreation they provide.

Forestry is the science and art of managing the natural resources that occur on and in association with forested lands in both the urban and rural landscape. These resources include trees, other plants, animals, soil, minerals, and climate and related air and water. The practice of forestry means management for specific objectives, whether timber production, recreational opportunities, wildlife habitat, forage, water regulation, preservation for scientific studies and special uses, or combinations of these uses.

Foresters are employed in a variety of settings. Many choose careers with industry, working for large multinational forest products companies or for smaller producers of forest products. Others work for public land management agencies, such as the U.S. Forest Service, National Park Service, Fish and Wildlife Service, Soil Conservation Service, or state departments of natural resources. Conservation organizations, such as the Wilderness Society or Sierra Club, have foresters on their staffs. Foresters with an international interest work for the Peace Corps or other international organizations. Still others find rewarding careers with municipal forestry organizations or with private tree and shrub-care companies. Finally, many foresters pursue additional education and careers in science: ecology, forest genetics, wood science, soils science, biometry, economics, and many others.

Students in this major must meet the requirements for one of the following five concentrations: Forest Resource Management, Urban and Community Forestry, Wood Products Manufacturing and Marketing, Forest Conservation and Environmental Studies, or Forest Sciences.

Forest Resource Management. Around the world, unprotected and unmanaged forests are being depleted and destroyed. Management is required to sustain our forests, and MSU’s forest management concentration provides the in-depth understanding of natural and social sciences necessary to manage forest ecosystems. Through hands-on laboratory experiences and field studies, students develop the ability to manage forests for goals ranging from providing biological diversity to producing timber and creating desired wildlife habitat. Students who elect the forest resource management concentration acquire the skills necessary to evaluate and take action to ensure the ecological, economic, and social sustainability of forests. They find employment with public land management agencies, private organizations, the forest products industry, consulting firms, and trade associations. This concentration is fully accredited by the Society of American Foresters (SAF). Students who complete the Bachelor of Science degree in Forestry with this concentration are eligible for full membership in the SAF.

Urban and Community Forestry. The urban and community forestry concentration focuses on the forests in communities where people live. This concentration has courses that provide an understanding of the biological aspects of urban forestry and the care and maintenance of individual trees, focus on understanding the dynamics of working with people and communities, and prepare graduates to develop, manage, and work in urban tree care companies. Students will be prepared to work in the tree-care industry, as municipal foresters, or in other positions with public agencies and community groups.

Wood Products Manufacturing and Marketing. The forest product industry is in need of people who understand the business of wood products. Professionals in forest products are well paid and are in high demand. Students who elect this concentration will find employment in manufacturing, marketing, management, technical service and research. Employment in this area requires high-level skills in management and marketing, a broad technical background in processing operations, and a fundamental understanding of wood properties. This concentration is multi-disciplinary and offers knowledge of fundamental wood science and technology including the biological, chemical, physical, and mechanical properties of wood, and processing operations including wood gluing, wood preservation, and wood modification. Study of manufacturing processes and engineered wood composites prepares graduates to become leaders in the forest products industries.

Forest Conservation and Environmental Studies. This concentration focuses on conservation and forest ecology and technical aspects of forest management. Students receive a strong scientific preparation for understanding natural resource issues. This concentration emphasizes the development of analytical and communications skills necessary to create a positive interchange of ideas between forestry professionals and non-technical audiences. Students in this concentration gain an understanding of forest systems and forest dynamics, as well as human interactions with the environment, and our ability to sustain, enhance, rehabilitate, and conserve forests. Basic scientific training in chemistry, physics, biology, and ecology and specialized courses in forest biology, soils, and conservation are required. Additional course work in natural resource economics and social science, natural resource law, environmental communication, international forestry, and a range of electives allow students to develop their interests in alignment with personal career goals. The professional skills developed through the Forest Conservation and Environmental Studies concentration will enable graduates to make significant contributions to resolving preservation and use issues.

Forest Science. The forest science concentration is designed for students electing scientific study of a discipline of forestry. Disciplines may include biometry, botany, ecology, economics, entomology, genetics, hydrology, management science, forest physiology, silviculture, social science, soil science, or wood science. The forest science concentration is intended primarily for students planning to pursue science careers, obtain graduate degrees, and work in education, industry or institutional research positions. For admission as a junior to the forest science concentration, students must have a minimum cumulative grade-point average of 3.25. To apply, students must meet with a Department of Forestry faculty adviser to prepare a program of 18 credits that is approved by the student’s adviser, the Undergraduate Curriculum Committee, and the department chairperson.

Requirements for the Bachelor of Science Degree in Forestry

1. The University requirements for bachelor's degrees as described in the Undergraduate Education section of this catalog; 120 credits, including general elective credits, are required for the Bachelor of Science degree in Forestry.

The University's Tier II writing requirement for the Forestry major is met by completing Forestry 464. That course is referenced in item 3. a. below.

Students who are enrolled in the Forestry major leading to the Bachelor of Science degree in the Department of Forestry may complete an alternative track to Integrative Studies in Biological and Physical Sciences that consists of the following courses:

a. Biological Science 110, or Plant Biology 105 and 106 combined.

b. Chemistry 141, 143, and 161.

The completion of Chemistry 161 and either Biological Science 110 or Plant Biology 106 satisfies the laboratory requirement. Biological Science 110, or Plant Biology 105 and 106 combined, and Chemistry 141, 143, and 161 may be counted toward both the alternative track and the requirements for the major referenced in item 3. below.
The completion of the College of Agriculture and Natural Resources mathematics requirement may also satisfy the University mathematics requirement.

2. The requirements of the College of Agriculture and Natural Resources for the Bachelor of Science degree.

Certain courses referenced in requirement 3. below may be counted toward College requirements as appropriate. The completion of Mathematics 116, 124, or 132 satisfies the College’s mathematics requirement.

3. The following requirements for the major:

a. All of the following courses: .................................................. 60

   CEM 141 General Chemistry ............................................. 4
   CEM 143 Survey of Organic Chemistry ............................. 4
   CEM 161 Chemistry Laboratory I ...................................... 1
   COM 100 Human Communication ...................................... 3
   CSS 210 Fundamentals of Soil and Landscape Science ........ 3
   E 202 Introduction to Macroeconomics .......................... 4
   FOR 201 Foundations of Forestry ....................................... 2
   FOR 204 Forest Vegetation ................................................ 4
   FOR 304 Wood Technology ................................................. 4
   FOR 306 Forest Biometry .................................................... 4
   FOR 330 Social Applications in Forestry ........................... 2
   FOR 404 Forest and Agricultural Ecology ......................... 4
   FOR 404L Forest and Agricultural Ecology Laboratory ....... 1
   FOR 406 Silviculture ......................................................... 4
   FOR 420 Forestry Field Studies .......................................... 3
   FOR 464 Forest Resource Economics (W) ......................... 3
   GEO 221 Introduction to Geographic Information .............. 3
   MTH 116 College Algebra and Trigonometry ....................... 5
   MTH 124 Survey of Calculus I ........................................... 3
   MTH 132 Calculus I ......................................................... 3
   PLB 105 Plant Biology ...................................................... 3
   PLB 106 Plant Biology Laboratory ...................................... 1

b. One of the following five concentrations: 19 to 30

   Forest Resource Management (25 credits):
   (1) All of the following courses (22 credits):
      FOR 400 Forest Harvest Operations .............................. 2
      FOR 408 Forest Resource Management ........................... 3
      FOR 412 Wildland Fire ................................................... 2
      FOR 424 Forest Resource Modeling ............................... 3
      FOR 466 Natural Resource Policy .................................. 3
      PLP 407 Diseases and Insects of Forest and Shade Trees .... 4
      PRR 449 Natural Resource Based Recreation Management Applications ........................................... 3
      EEP 404 Public Sector Budgeting and Program Evaluation (W) ......................................................... 3
   (2) One of the following courses (3 credits):
      FW 410 Upland Ecosystem Management .......................... 3
      FW 444 Conservation Biology .......................................... 3

   Forest Conservation and Environmental Studies (23 to 26 credits):
   (1) All of the following courses (12 credits):
      ANR 192 Environmental Issues Seminar ......................... 3
      FOR 466 Natural Resource Policy ..................................... 3
      FW 444 Conservation Biology .......................................... 3
      HST 391 Environmental History of North America ............ 3
   (2) One of the following courses (3 or 4 credits):
      PW 443 Restoration Ecology ......................................... 3
      PLP 407 Diseases and Insects of Forest and Shade Trees .... 4
      ENT 422 Aquatic Entomology .......................................... 3
      ENT 477 Pest Management I: Pesticides in Management Systems ............................................ 3
   (3) One of the following courses (2 to 4 credits):
      FOR 412 Wildland Fire ................................................... 2
      GLG 201 The Dynamic Earth .......................................... 4
      GLG 302 Geology of Michigan ....................................... 3
      MMG 426 Biogeochemistry ............................................. 3
   (4) One of the following courses (3 credits):
      PLS 310 Public Bureaucracy in the Policy Process .......... 3
      PLS 313 Public Policy Analysis ..................................... 3
      PLS 311 Political Parties and Interest Groups ............... 3
      ZOL 446 Environmental Issues and Public Policy .......... 3
   (5) One of the following courses (3 credits):
      PRR 302 Environmental Attitudes and Concepts ............. 3
      SOC 452 Environment and Society .................................... 3

   Forest Sciences (30 credits)
   (1) All of the following courses (10 credits):
      FOR 310 Foundations of Forest Conservation .................. 2
      FOR 410 Forest Conservation Thesis (W) ......................... 3
      FOR 424 Forest Resource Modeling ............................... 2
      STT 464 Statistical Methods for Biologists I .................. 3
   (2) One of the following courses (3 credits):
      MTH 124 Survey of Calculus I ....................................... 3
      MTH 132 Calculus I ...................................................... 3
   (3) Complete an additional 17 credits of courses approved by the adviser, Undergraduate committee and chairperson.

   Wood Products Manufacturing and Marketing (19 credits)
   All of the following courses (17 credits)
   ADV 205 Principles of Advertising .................................. 4
   BCM 124 Woodworking and Carpentry ............................... 4
   FOR 305 Wood Composites ................................................ 2
   FOR 308 Wood Products Internship .................................... 2
   FOR 415 Forest Products Marketing .................................. 2

   GBL 323 Introduction to Business Law ............................ 3
   STT 421 Statistics I ......................................................... 3

   Urban and Community Forestry (27 credits)
   (1) All of the following courses (21 credits)
      ADV 260 Principles of Public Relations ......................... 4
      EEP 404 Public Sector Budgeting and Program Evaluation .... 3
      FOR 460 Arboriculture ................................................... 3
      FOR 461 Urban Forestry .................................................. 3
      HRT 311 Landscape Design and Management Specifications .... 4
      PLP 407 Diseases and Insects of Forest and Shade Trees .... 4
   (2) One of the following courses (3 credits):
      SOC 361 Contemporary Communities ................................ 3
      SOC 375 Urban Sociology ............................................... 3
   (3) One of the following courses (3 credits):
      FOR 466 Natural Resource Policy ................................... 3
      PLS 313 Public Policy Analysis ..................................... 3

   GRADUATE STUDY

   The Department of Forestry offers Master of Science and Doctor of Philosophy degree programs in forestry, and plant breeding and genetics—forestry. The department also offers a Doctor of Philosophy degree program in forestry—environmental toxicology.

   Students in the Master of Science degree program in forestry are eligible for the dual Juris Doctor (JD) program with Michigan State University - College of Law. A joint degree program in forest business management leading to the Master of Science degree in Forestry and the Master of Business Administration degree is also offered in cooperation with The Eli Broad Graduate School of Management. The joint degree program usually requires two years of study, the first in the Department of Forestry and the second in the Broad School.

   The Department of Forestry is affiliated with the Doctor of Philosophy degree program with a major in ecology, evolutionary biology and behavior. For information about a Doctor of Philosophy degree program that involves ecology, evolutionary biology and behavior and a major in the Department of Forestry, refer to the statement on the doctoral program in ecology, evolutionary biology and behavior in the College of Natural Science section of this catalog.

   Students who are enrolled in Master of Science degree programs in the Department of Forestry may elect a specialization in Ecology, Evolutionary Biology and Behavior. For additional information, refer to the statement on the specialization in the College of Natural Science section of this catalog.

   Students who are enrolled in Master of Science and Doctor of Philosophy degree programs in the Department of Forestry may elect specializations in resource economics. For additional information, refer to the statement on Interdepartmental Graduate Specializations in Resource Economics.

   FORESTRY

   Master of Science

   The Master of Science degree may be earned either in a professional program in forest management or administration or in a forestry specialty program. The professional program in forest management or administration is viewed as an extension of general forestry, and, therefore, requires a bachelor’s degree with a major in forestry as a prerequisite or a collateral program of study in undergraduate forestry courses. There is, however, considerable flexibility in the program to meet individual student needs and objectives.

   A forestry specialty program, on the other hand, is as readily open to nonforesters as to foresters. It includes some forestry
courses but draws mainly from other departments in the University to provide courses appropriate to forestry specialties: forest biometrics, tree physiology, forest soils, forest recreation, forest management, forest business management, forest economics, forest influences, forest ecology, forest genetics, forest entomology, forest hydrology, and wood science and technology.

Qualified students with undergraduate degrees in forestry can usually complete the requirements for the Master of Science degree in forestry in one academic year. The student must meet the requirements of the University and of the College of Agriculture and Natural Resources. The student must also complete additional requirements for the program as specified by the student’s academic adviser. The student may elect either Plan A (with thesis) or Plan B (without thesis). A total of 30 credits is required for the degree under Plan A or Plan B.

Doctor of Philosophy

The Doctor of Philosophy degree program with a major in forestry is open to nonforesters as well as foresters. Forestry specialties are studied in depth.

Qualified students with undergraduate degrees in forestry can usually complete the requirements for the Doctor of Philosophy degree in forestry in three academic years. The student must meet the requirements of the University and of the College of Agriculture and Natural Resources. The student must also complete additional requirements for the program as specified by the student’s academic adviser.

Program requirements are highly variable, depending on the student’s background of study and experience. In all cases, the student must complete an acceptable dissertation incorporating the results of original research.

FORESTRY—ENVIRONMENTAL TOXICOLOGY

Doctor of Philosophy

For information about the Doctor of Philosophy degree program in forestry—environmental toxicology, refer to the statement on Multidepartmental Doctoral Programs in Environmental Toxicology in the Graduate Education section of this catalog.

PLANT BREEDING and GENETICS—FORESTRY

The Department of Forestry offers Master of Science and Doctor of Philosophy degree programs in plant breeding and genetics—forestry. Students meet the requirements for admission and the requirements for the degree as specified in the statement on Interdepartmental Graduate Programs in Plant Breeding and Genetics.

Additional information about graduate study may be obtained by writing to the Department of Forestry.
UNDERGRADUATE PROGRAM

Horticulture is the science and art concerned with the culture, marketing, and utilization of high-value intensively cultivated plants. Horticultural crops are diverse, including both annual and perennial species, both food and ornamental plants, and plants grown both outdoors and in controlled environments. Horticultural foods and food products, flowers, and landscapes sustain and enrich our lives. The primary horticulture discipline areas include floriculture (flowers), landscape horticulture (trees and shrubs), crop culture (vegetables), and pomology (fruits).

Graduates with a major in horticulture may enter a broad range of challenging and rewarding professional careers in production, management, marketing, education, consulting and service industries, or research. In addition, graduates frequently become entrepreneurs or obtain employment in horticultural business enterprises (e.g., commercial production operations, landscape companies, nurseries, retail flower shops, or fruit and vegetable markets). Graduates may also pursue careers in nontraditional areas that require a knowledge of horticulture such as secondary education, the publication industry, or international development.

The academic study of horticulture is by its nature highly integrative. The undergraduate program combines scientific knowledge, knowledge of technology, and problem-solving skills for application in various professions related to horticulture. Students in horticulture study such diverse fundamental disciplines as physical science (chemistry), biological sciences (botany, genetics, plant physiology, entomology, and plant pathology), environmental science (soil science), and business science (economics, management, and marketing). Communication and computer skills are also cultivated within the horticulture curriculum. Students complete either the General Horticulture concentration or the Horticulture Landscape Design, Construction, and Management concentration. In both concentrations, students obtain hands-on experiences through laboratory exercises in the greenhouses, in the horticulture gardens, or at the Horticulture Teaching and Research Center. Field trips expose students to successful horticultural businesses, industries, and support services within Michigan. Students may gain professional work experience through internships, independent study, and part-time employment in research and extension programs within the Department of Horticulture.

Students who are enrolled in the Bachelor of Science degree program with a major in horticulture may elect a Specialization in Agricultural and Natural Resources Biotechnology. For additional information, refer to the Specialization in Agricultural and Natural Resources Biotechnology statement.

Requirements for the Bachelor of Science Degree in Horticulture

1. The University requirements for bachelor’s degrees as described in the Undergraduate Education section of this catalog; 120 credits, including general elective credits, are required for the Bachelor of Science degree in Horticulture.

   The University’s Tier II writing requirement for the Horticulture major is met by completing Horticulture 404. That course is referenced in item 3. a. below.

   Students who are enrolled in the Horticulture major leading to the Bachelor of Science degree in Horticulture may complete an alternative track to Horticulture 404. That course is referenced in item 3. a. below.

   The completion of College of Agriculture and Natural Resources mathematics requirement may also satisfy the University mathematics requirement.

2. The requirements of the College of Agriculture and Natural Resources for the Bachelor of Science degree.

   Certain courses referenced in requirement 3. b. may be counted toward College requirements as appropriate.

3. The following requirements for the major:

   a. All of the following courses: ................................................ 28

   b. One of the following two concentrations: 34 to 42

   General Horticulture (34 credits):
   (1) All of the following courses (16 credits):

   CEM 141 General Chemistry .............................................. 4
   CEM 143 Survey of Organic Chemistry ............................... 4
   CEM 161 Chemistry Laboratory I ...................................... 1
   CSS 210 Fundamentals of Soil and Landscape Science ........... 3
   HRT 203 Principles of Horticulture I ................................ 2
   HRT 203L Principles of Horticulture Laboratory .................. 2
   HRT 204 Plant Propagation ............................................... 2
   HRT 207 Horticulture Career Development ........................ 1
   HRT 404 Horticulture Management ................................... 3
   HRT 493 Professional Internship in Horticulture ................. 3
   PLB 105 Plant Biology .................................................. 3
   PLB 106 Plant Biology Laboratory .................................... 1

   (2) Nine credits of designated production course work from an approved departmental list. A maximum of 6 credits of Horticulture 432 - 435L may be used to meet this requirement.

   (3) Three of the following courses (9 credits):

   Either Horticulture 401 or 480 must be used as one of the three courses used to satisfy this requirement.

   CSS 451 Biotechnology Applications for Plant Breeding and Genetics ........................................... 3
   HRT 401 Physiology and Management of Herbaceous Plants ........ 3
   HRT 403 Handling and Storage of Horticultural Crops ............ 3
   HRT 407 Horticulture Marketing ....................................... 3
   HRT 480 Woody Plant Physiology .................................... 3
   HRT 486 Biotechnology in Agriculture: Applications and Ethical Issues ........................................ 3

Horticulture Landscape Design, Construction, and Management (42 credits):
   (1) All of the following courses:

   ATM 431 Irrigation, Drainage and Erosion Control Systems ........ 3
   CSS 232 Introduction to Turfgrass Science ............................ 3
   HRT 210 Nursery Management ......................................... 3
   HRT 211 Landscape Plants I ............................................ 3
   HRT 212 Landscape Plants II .......................................... 3
   HRT 311 Landscape Design and Management Specifications ........ 4
   HRT 411 Landscape Contract Management .......................... 3
   HRT 480 Woody Plant Physiology .................................... 3
   LA 220 Graphic Communication ....................................... 4
   LA 330 Site Construction: Materials and Methods ................ 4
   MTH 116 College Algebra and Trigonometry ........................ 5
   PLP 407 Diseases and Insects of Forest and Shade Trees ........ 4

GRADUATE STUDY

The Department of Horticulture offers graduate study leading to the Master of Science and Doctor of Philosophy degrees. Areas of study include: floriculture, landscape horticulture, pomology, and vegetable crops, with several areas of specialization according to the student's research interest.

The Department of Horticulture is affiliated with the Doctor of Philosophy degree program that involves ecology, evolutionary biology and behavior. For additional information, refer to the specialization in the College of Natural Science section of this catalog.

Students who are enrolled in Master of Science degree programs in the Department of Horticulture may elect a Specialization in Ecology, Evolutionary Biology and Behavior. For additional information, refer to the specialization in the College of Natural Science section of this catalog.

Students who are enrolled in Master of Science degree programs in the Department of Horticulture may elect a Specialization in Food Safety. For additional information, refer to the specialization in the College of Veterinary Medicine section of this catalog.
HORTICULTURE

Master of Science

In addition to meeting the requirements of the University and of the College of Agriculture and Natural Resources, students must meet the requirements specified below.

Admission

Students must have completed a Bachelor of Science degree or its equivalent in a plant related field, a basic course in horticulture, 15 credits in plant or soil sciences including plant physiology, and one course each in trigonometry, physics, and organic chemistry. Exceptions must be approved by the departmental Graduate Affairs Committee. Applicants lacking the necessary undergraduate background will be required to complete either collateral courses in addition to the requirements for the master's degree or a second Bachelor of Science degree with a major acceptable to the department.

Requirements for the Master of Science Degree in Horticulture

The student may elect either Plan A (with thesis) or Plan B (without thesis). A total of 30 credits is required for the degree under Plan A or Plan B.

The program of study for the Master of Science degree will include courses from departments other than the Department of Horticulture, but it should include at least 3 credits in the 800 series in horticulture in addition to research. For Plan A, at least 6 but not more than 10 credits of master's thesis research (Horticulture 899) is required. For Plan B, at least 2 but not more than 5 credits of research (Horticulture 898) is required. All programs of study are subject to departmental review.

A final oral examination on courses and research pursued during the program will be scheduled at the end of the student's final semester of enrollment.

Doctor of Philosophy

In addition to meeting the requirements of the University and of the College of Agriculture and Natural Resources, students must meet the requirements specified below.

Requirements for the Doctor of Philosophy Degree in Horticulture

An oral qualifying examination may be conducted by the guidance committee shortly after the student begins advanced graduate study to determine his or her qualifications and to provide a basis for developing the program of study.

At least 6 credits in the 800 series in horticulture are recommended. Three of the six credits may have been completed as part of master's degree requirements.

PLANT BREEDING and GENETICS—HORTICULTURE

The Department of Horticulture offers Master of Science and Doctor of Philosophy degree programs in plant breeding and genetics—horticulture. Students meet the requirements for admission and the requirements both for Horticulture, as specified above, and for Plant Breeding and Genetics, as specified in the statement on Interdepartmental Graduate Programs in Plant Breeding and Genetics.

SCHOOL of PACKAGING

Sara J. Risch, Director

UNDERGRADUATE PROGRAMS

The School of Packaging offers a program of instruction leading to the degree of Bachelor of Science. The program combines basic principles of physics, chemistry, mathematics, and materials science with a cognate in business to prepare students for rewarding careers in the manufactured products industries. Career opportunities are plentiful since some form of packaging is involved in the production and movement to market of nearly every item of consumption in today's economy. In addition to careers in companies that use packaging, attractive opportunities are also available in the package supply industries. Package supplier industries include companies that print and convert paper and flexible plastic materials as well as manufacturers of such diverse items as bottles, cans, folding cartons, corrugated boxes, drums, wooden containers, pallets, pipes, tubes, vials, and jars. Packaging impacts most functions in manufacturing firms so graduates may work in package development, production, quality control, research, sales, purchasing, marketing, testing, distribution, or technical services.

In its flexibility, the program allows students to leverage their personal skills and interests and to make individualized choices. Elective courses provide for broad, general preparation or for focused study in food packaging, medical packaging, pharmaceutical packaging, automotive packaging, distribution, robotics, and other areas.

Admission as a Junior

Enrollments in the School of Packaging are limited. To be considered for admission to the major, the student must have:

1. Completed at least 56 credits.
2. Completed the following courses with a minimum grade of 2.0 in each course:
   a. Chemistry 141.
   c. Physics 231.

The student's cumulative grade-point average for all courses completed is considered in the admission decision. Factors such as work experience, personal experience, and diversity may also be considered.

For additional information about admissions criteria and procedures, students should contact the School of Packaging.

Requirements for the Bachelor of Science Degree in Packaging

1. The University requirements for bachelor's degrees as described in the Undergraduate Education section of this catalog; 120 credits, including general elective credits, are required for the Bachelor of Science degree in Packaging.

The University's Tier II writing requirement for the Packaging major is met by completing Packaging 465. That course is referenced in item 3. a. below.

Students who are enrolled in the Packaging major leading to the Bachelor of Science degree in the School of Packaging may complete an alternative track to Integrative Studies in Biological and Physical Sciences that consists of the following courses: Chemistry 141, 143 and 161 and Microbiology 105 or 205. The completion of Chemistry 143 and 161 satisfies the laboratory requirement. Chemistry 141, 143 and 161 and Microbiology 105 or 205 may be counted toward both the alternative track and the requirements for the major referenced in item 3. below.

The completion of the College of Agriculture and Natural Resources mathematics requirement may also satisfy the University mathematics requirement.

2. The requirements of the College of Agriculture and Natural Resources for the Bachelor of Science degree.
GRADUATE STUDY

The School of Packaging offers graduate programs leading to the degrees of Master of Science and Doctor of Philosophy in packaging. Facilities and instrumentation are available for advanced study and research in the following areas: product and/or packaging damage in the physical distribution environment, barrier characteristics of packaging systems and materials, quality preservation and storage stability of packaged products, and mechanical properties of packaging materials and systems. Other areas of study include medical packaging, automatic identification, logistics, environmental impact and recycling of packaging materials, human factors in packaging, and packaging systems development and optimization. Programs of study and research are flexible and are designed to meet the needs of individual students.

Students who are enrolled in Master of Science degree programs in the School of Packaging may elect a Specialization in the area of study referenced above. Pursuing an area of specialization is designed to broaden the student's background for future career activities.

In addition to meeting the requirements of the University and of the College of Agriculture and Natural Resources, students must meet the requirements specified below.

Master of Science

Emphasis is placed upon a broad education in packaging that includes specialization in one of the areas of study referenced above.

Student participation in seminars and in the teaching program, where appropriate, is designed to broaden the student's background for future career activities.

In addition to meeting the requirements of the University and of the College of Agriculture and Natural Resources, students must meet the requirements specified below.

Admission

Entering graduate students are expected to have a bachelor's degree in packaging or a related undergraduate field. Students lacking the equivalent of a bachelor's degree in packaging may be admitted provisionally and be required to complete collateral courses to make up any deficiencies.

Requirements for the Master of Science Degree in Packaging

The master's degree program in packaging is available under either Plan A (with thesis) or Plan B (without thesis). A total of 30 credits is required for the degree under Plan A or Plan B. The student's program of study must be approved by either the student's guidance committee (Plan A) or the student's major professor (Plan B).

Requirements for Both Plan A and Plan B

The student must:
1. Complete at least 16 credits in Packaging courses.
2. Demonstrate an understanding of basic statistics.

Additional Requirements for Plan A

1. At least 9 credits in 800-900 level Packaging courses excluding Packaging 888, 890, and 899.
2. At least six, but not more than eight, credits of Packaging 888.

Additional Requirements for Plan B

1. At least 12 credits in 800-900 level Packaging courses excluding Packaging 888, 890, and 899.
2. Two credits of Packaging 888.

Doctor of Philosophy

In addition to meeting the requirements of the University and of the College of Agriculture and Natural Resources, the student must meet the requirements specified below.

Admission

To be considered for admission to the Doctor of Philosophy degree program in packaging, an applicant must submit scores on the Graduate Record Examination (GRE) General Test.

To be admitted to the Doctor of Philosophy degree program in packaging on regular status, a student must have:
1. Completed a master's degree program in packaging, or in a related science or engineering area, for which a thesis was required.
2. A grade-point average of at least 3.40 for the master's degree program.
3. Acceptable scores on the GRE General Test.

Provisional admission may be granted to an applicant who does not meet the above requirements but shows outstanding potential.

Guidance Committee

At least three members of the student's guidance committee must be faculty members in the School of Packaging, and at least one member must be a faculty member from outside the school.
AGRICULTURE AND NATURAL RESOURCES  
School of Packaging

Requirements for the Doctor of Philosophy Degree in Packaging

The student must:

1. Complete both of the following courses:
   - PKG 985 Analytical Solutions to Packaging Design ........................................... 3
   - PKG 992 Packaging Seminar ........................................... 2
2. Complete additional 800–900 level courses related to the student’s dissertation research as specified by the student’s guidance committee.
3. Pass both a written and an oral comprehensive examination.
4. Complete a dissertation in one of the following areas of packaging: material science applications in packaging, food packaging, mass transport applications, or the dynamics and physical distribution aspects of packaging.

SCHOOL of PLANNING, DESIGN and CONSTRUCTION

Robert D. von Bernuth, Director

The School of Planning, Design, and Construction is jointly administered by the College of Agriculture and Natural Resources and the College of Social Science. The College of Agriculture and Natural Resources is the primary administrative unit. The school includes the academic programs that affect the various components of the built environment – construction management, landscape architecture, interior design, and urban and regional planning. Its educational discovery and engagement programs enhance the quality of life in a sustainable manner. The school serves the needs of students, the public, and the built environment via its undergraduate and graduate programs, research, conferences, and workshops offered through various outreach programs.

The School is also affiliated with the Community and Economic Development Program which is responsible for facilitating and coordinating outreach scholarship and public service efforts designed to address the needs of urban residents and communities in Michigan, the nation, and internationally. The program advances the University’s land-grant mission by implementing, evaluating and disseminating innovative approaches developed through multi-disciplinary research and collaborative community partnerships. The program provides a collaborative learning environment for faculty and students at Michigan State University to participate in a scholarship of engagement in generating and applying knowledge to address the contemporary challenges of communities.

UNDERGRADUATE PROGRAMS

The School of Planning, Design, and Construction exists to educate individuals for professional careers in areas impacting the built environment, spanning the life of a constructed edifice or entity, from planning, to design, and construction management. The School offers Bachelor of Science, Bachelor of Arts and Bachelor of Landscape Architecture degree programs. Individuals meeting the general University requirements for admission shown in the Undergraduate Education section of this catalog are enrolled in the Undergraduate University Division but may declare a major preference in the School of Planning, Design, and Construction. Refer to the specific degree program for further details regarding junior-level admission requirements and program curriculum.

The School offers programs leading to bachelor’s degrees in the following fields:

- Construction Management
- Interior Design
- Landscape Architecture
- Urban and Regional Planning

The Bachelor of Science degree program with a major in urban and regional planning is offered through the College of Social Science. For information about this program, refer to the statement on the School of Planning, Design, and Construction in the College of Social Science section of this catalog.

CONSTRUCTION MANAGEMENT

The program is designed to provide a student with a background in managerial, technological, economic, social, political, and environmental aspects of residential and commercial construction. A systems approach is used and includes project management, construction science, land acquisition and development, real estate, finance, management, and marketing. Career opportunities include supervisory and managerial employment within commercial and residential contracting, land development, and real estate organizations; material distribution systems; financial institutions; and governmental agencies.

Admission as a Junior

Construction management builds upon a basic understanding of mathematics, physics, statistics, and economics to develop the skills necessary to manage construction projects. Prior to enrollment in the major, students must have demonstrated this basic understanding by a minimum performance in the courses listed and a minimum overall grade point average.

Enrollment in the construction management major is limited. Those seeking admission must at least meet the criteria listed below.

1. Completion of at least 56 credits with a cumulative University grade-point average of at least 2.30.
2. Completion of the following courses with a minimum grade-point average of 2.00:
   a. MTH 124 Survey of Calculus I . . . . . . . . 3
   b. PHY 231 Introductory Physics I . . . . . . . . 3
   c. STT 200 Statistical Methods . . . . . . . . 3
   or STT 201 Statistical Methods . . . . . . . . 4
   or STT 315 Introduction to Probability and Statistics for Business . . . . . . . . 3
   or STT 421 Statistics I . . . . . . . . 3
   d. EC 201 Introduction to Microeconomics . . . . . . . . 3
   or EC 202 Introduction to Macroeconomics . . . . . . . . 3

While a cumulative University grade-point average of 2.30 is necessary to be considered for admission to the School, it does not guarantee admission. Admission decisions are based primarily on cumulative University grade-point average and grades in the courses listed above. Other factors such as work experience, personal experience, performance in construction management courses, and diversity may also be considered.
For additional information about admissions criteria and procedures, students should contact the Construction Management Program in the School of Planning, Design, and Construction.

Requirements for the Bachelor of Science Degree in Construction Management

1. The University requirements for bachelor's degrees as described in the Undergraduate Education section of this catalog; 120 credits, including general elective credits, are required for the Bachelor of Science degree in Construction Management.

   The University's Tier II writing requirement for the Construction Management major is met by completing Construction Management 385 or 435 or 436. Those courses are referenced in item 3.b. below.

   Students who are enrolled in the Construction Management major leading to the Bachelor of Science degree may complete an alternative track to Integrative Studies in Biological and Physical Sciences that consists of Physics 231 and 251 and one of the following choices: Biological Science 110 or Biological Science 111 and 111L or Plant Biology 105 and 106 or Microbiology and Molecular Genetics 205 and 206. The completion of Physics 251 and Biological Science 110 or 111L or Plant Biology 106 or Microbiology and Molecular Genetics 206 satisfies the laboratory requirement. With adviser approval, for this laboratory requirement, Biological Science 111L, Plant Biology 106 and Microbiology and Molecular Genetics 206 may be waived if the student completes another chemistry laboratory course or a physics laboratory course beyond Physics 251.

   Physics 231 and 251 and Biological Science 110 or 111L or Plant Biology 105 and 106 or Microbiology and Molecular Genetics 205 and 206 may be waived if the student completes another chemistry laboratory course or a physics laboratory course beyond Physics 251.

   The completion of the College of Agriculture and Natural Resources mathematics requirement may also satisfy the University mathematics requirement.

2. The requirements of the College of Agriculture and Natural Resources for the Bachelor of Science degree:

   Certain courses referenced in requirement 3. below may be counted toward College requirements as appropriate. The completion of Mathematics 124 satisfies the College's mathematics requirement.

3. The following requirements for the major:

   a. All of the following courses: ........................................ 70
   ACC 230 Survey of Accounting Concepts .......................... 3
   CMP 101 Principles of Building Construction Management .......................... 2
   CMP 124 Residential Construction Materials and Methods .................. 3
   CMP 210 Commercial Construction Methods .................................. 3
   CMP 211 Building Codes .................................................. 3
   CMP 222 Statics and Strengths of Materials .............................. 3
   CMP 230 Utility Systems .................................................... 4
   CMP 305 Site Construction and Measurement ............................. 3
   CMP 315 Construction Quantity Surveying ............................... 3
   CMP 322 Structural Systems ................................................. 3
   CMP 325 Real Estate Principles and Construction Finance ............... 4
   CMP 328 Construction Presentation Graphics ............................ 2
   CMP 353 Land Development ................................................ 3
   CMP 385 Construction Documents and Contracts (W) ..................... 3
   CMP 401 Construction Safety Management ............................... 3
   CMP 411 Construction Project Scheduling ................................ 3
   CMP 415 Cost Estimating and Analysis .................................. 3
   CMP 423 Construction Project Management ............................. 3
   COM 161 Introduction to Communication .................................. 3
   CSE 101 Computing Concepts and Competencies .................................. 3
   GBL 323 Introduction to Business Law ................................... 3
   MTH 124 Survey of Calculus I ............................................. 3
   PHY 231 Introductory Physics I ............................................ 3
   PHY 251 Introductory Physics Laboratory I ............................... 1
   Students who pass a waiver examination will not be required to complete Computer Science and Engineering 101.

   b. One of the following courses: ...................................... 3
   CMP 435 Residential Building Projects (W) ............................. 3
   CMP 436 Commercial Building Projects (W) ............................. 3
   CMP 493 Professional Internship in Building Construction Management .... 3

   c. Complete four credits from the following courses: .............. 4
   CEM 141 General Chemistry ............................................. 4
   CHE 161 Chemistry Laboratory I ........................................ 1
   FOR 419 Applications of Geographic Information Systems to Natural Resource Management ................................. 4
   PHY 232 Introductory Physics II ....................................... 3
   PHY 252 Introductory Physics Laboratory II ........................... 1
   ADV 160 Media Relations for Professionals ............................. 3
   COM 225 An Introduction to Interpersonal Communication ......... 3
   COM 240 Introduction to Organizational Communication ............ 4
   ENG 226 Introduction to Creative Writing ............................. 4
   ENG 232 Writing as Exploration ........................................... 3
   STT 200 Statistical Methods ............................................. 3
   STT 201 Statistical Methods ............................................. 4
   STT 315 Introduction to Probability and Statistics for Business .......... 3
   STT 421 Statistics I ...................................................... 3
   f. One of the following courses: ...................................... 3

   EC 201 Introduction to Microeconomics ................................ 3
   EC 202 Introduction to Macroeconomics ................................ 3
   FI 320 Introduction to Finance ....................................... 3
   MSC 303 Introduction to Supply Chain Management .................. 3
   MSC 327 Introduction to Marketing ................................... 3
   MGT 325 Management Skills and Processes ................................ 3

   Interior Design

   This major provides academic preparation designed to enable the graduate to enter the profession of interior design. The program has been accredited by the Foundation for Interior Design Education Research (F.I.D.E.R.).

   Emphasis is placed on learning the means of satisfying functional and aesthetic requirements appropriate for a variety of specific interior spatial uses. Consideration is given to the human being and the micro-environment in the total complex of environmental relationships. The combination of courses and experiences provides students an opportunity to develop knowledge, skills, and insights needed to solve design problems creatively and effectively.

   Students meeting the University admissions requirements are enrolled as freshmen and sophomores in the Undergraduate University Division but may declare a major preference for Interior Design.

   Admission as a Junior

   The number of students admitted as juniors to the major in interior design is limited. To be considered for admission, a student must have:

   1. An all-University grade–point average of 2.50 or better.
   2. A grade–point average of 3.00 or better in selected interior design courses.

   In addition, transfer students must have previous design work evaluated by the department prior to placements in required courses.

   Selective admissions are made at the end of spring semester for MSU and transfer students from those students who have met the criteria referenced above and who have completed Interior Design 252. The final selection of students to be admitted to the major is based on the cumulative grade–point average of all courses taken and a grade–point average calculated for selected courses. In addition, factors such as diversity and residency may be considered.

Requirements for the Bachelor of Arts Degree in Interior Design

1. The University requirements for bachelor's degrees as described in the Undergraduate Education section of this catalog; 120 credits, including general elective credits, are required for the Bachelor of Arts degree in Interior Design.

   The University's Tier II writing requirement for the Interior Design major is met by completing Interior Design 340, 440, 442, and 452. Those courses are referenced in item 3.a. below.

   The completion of the College of Agriculture and Natural Resources mathematics requirement may also satisfy the University mathematics requirement.

2. The completion of the requirements of the College of Agriculture and Natural Resources for the Bachelor of Arts degree.

3. The following requirements for the major:

   a. All of the following courses in the School of Planning, Design, and Construction: ................................................. 59
   IDS 140 Design for Living ............................................. 3
   IDS 142 Design Theory Studio ........................................... 3
   IDS 150 Interior Design Drafting ........................................ 3
   IDS 152 Interior Environments .......................................... 3
   IDS 231 Textile Materials .............................................. 4
   IDS 240 Computer–Aided Design for Designers .................. 3
   IDS 250 CAD and Structural Systems .................................. 3
   IDS 252 Interior Design Synthesis I ................................... 4
   IDS 340 Interior Design Specifications and Workroom Practices .............................................. 3
   IDS 342 Interior Design: Human Dimensions ....................... 3
LANDSCAPE ARCHITECTURE

The undergraduate Bachelor of Landscape Architecture program provides a diverse learning experience which strives for a balance among philosophy, theory, and application of concepts related to past, present, and future problem-solving in landscape architecture and allied environmental planning and design professions.

The program includes professional courses in design theory and graphic communications, environmental perception, history, and plant materials and their uses; technical aspects of site development, design applications for representative land uses; site planning for typical projects; community planning, housing and recreational development; and urban and regional design and planning.

The program offers meaningful design opportunities and challenges within the classroom and on community projects, which prepare the student to communicate through writing, speech and graphics. These objectives are met in group and in individual assignments where independent study and growth are encouraged.

The program in landscape architecture at Michigan State University has been accredited by the American Society of Landscape Architects.

Upon completion of the undergraduate program, the individual is prepared to participate at the entry level of professional landscape architecture or to pursue graduate study leading to more specialized phases of professional work.

Honors Study

Students interested in honors programs in landscape architecture should consult with an academic adviser.

Admission as a Junior

The number of students who can be admitted as juniors to the landscape architecture major is limited. To be considered for admission as a junior, a student must have completed the core courses referenced in item 2. below. Students who have been admitted as juniors are entitled to enroll in upper-level landscape architecture courses required for the Bachelor of Landscape Architecture degree.

Admissions are determined by the faculty on the basis of the relative qualifications of applicants and the enrollment capacity in the program. Admission is competitive.

Detailed information regarding admission requirements and procedures is available from the Director for Landscape Architecture, School of Planning, Design and Construction.

Requirements for the Bachelor of Landscape Architecture Degree in Landscape Architecture

1. The University requirements for bachelor's degrees as described in the Undergraduate Education section of this catalog: 139 credits, including general elective credits, are required for the Bachelor of Landscape Architecture degree in Landscape Architecture.

   Students who are enrolled in the Landscape Architecture major leading to the Bachelor of Landscape Architecture degree in the School of Planning, Design and Construction may complete an alternative track to Integrative Studies in Biological and Physical Sciences that consists of the following courses: Biological Science 110, Chemistry 141 and 161, and Zoology 355 and 355L. The completion of Chemistry 161 and Zoology 355L satisfies the laboratory requirement. Biological Science 110, Chemistry 141 and 161, and Zoology 355 and 355L may be counted toward both the alternative track and the requirements for the major referenced in item 2. below.

   The completion of Mathematics 116 referenced in requirement 2. below may also satisfy the University mathematics requirement.

   The University's Tier II writing requirement for the Landscape Architecture major is met by completing Landscape Architecture 480 or 492. Those courses are referenced in item 2. d. below.

2. The following requirements for the major:

   a. A minimum grade--point average of 2.00 in the 43 credits required in 300-400 level Landscape Architecture courses referenced in requirement 2.d. below.

   b. Collateral Courses:

      (1) All of the following courses (28 credits):

      | Course Code | Course Title                          | Credits |
      |-------------|--------------------------------------|---------|
      | BS 110      | Organisms and Populations            | 4       |
      | CEM 141     | General Chemistry                    | 4       |
      | CEM 161     | Chemistry Laboratory I               | 1       |
      | HRT 211     | Landscape Plants I                  | 3       |
      | HRT 212     | Landscape Plants II                 | 3       |
      | HRT 311     | Landscape Design and Management      |          |
      | MTH 116     | College Algebra and Trigonometry     | 5       |
      | UP 494      | Planning Practicum                   | 4       |

      (2) One of the following courses (3 credits):

      | Course Code | Course Title                          | Credits |
      |-------------|--------------------------------------|---------|
      | GEO 221     | Introduction to Geographic Information| 3       |
      | IDES 240    | Computer Aided Design for Designers  | 3       |

   c. Environmental Cognate Courses

      (1) All of the following courses (10 credits):

      | Course Code | Course Title                          | Credits |
      |-------------|--------------------------------------|---------|
      | CSS 210     | Fundamentals of Soil and Landscape Science | 3       |
      | GEO 206     | Physical Geography                   | 3       |
      | ZOL 355     | Ecology                              | 3       |
      | ZOL 355L    | Ecology Laboratory                   | 1       |

      (2) At least 6 additional credits in courses related to the environment approved by the student's academic adviser.

   d. Landscape Architecture Courses: All of the following courses:

      | Course Code | Course Title                          | Credits |
      |-------------|--------------------------------------|---------|
      | LA 200      | Introduction to Landscape Architecture | 3       |
      | LA 220      | Graphic Communication                 | 4       |
      | LA 240      | Applied Design Fundamentals           | 4       |
      | LA 270      | Landscape Design History              | 3       |
      | LA 330      | Site Construction: Materials and Methods | 4       |
      | LA 331      | Site Engineering                     | 4       |
      | LA 341      | Basic Site Design I                   | 4       |
      | LA 342      | Basic Site Design II                  | 5       |
      | LA 437      | Design Implementation                 | 4       |
      | LA 443      | Community Project Design I            | 5       |
      | LA 444      | Community Project Design II           | 5       |
      | LA 445      | Advanced Project Design               | 4       |
      | LA 446      | Regional Environmental Design         | 3       |
      | LA 480      | Professional Practice (W)             | 3       |
      | LA 492      | Senior Research Seminar (W)           | 3       |

   e. One of the following courses:

      | Course Code | Course Title                          | Credits |
      |-------------|--------------------------------------|---------|
      | EC 201      | Introduction to Microeconomics        | 3       |
      | EC 202      | Introduction to Macroeconomics        | 3       |

   f. Directed Electives

      A minimum of 12 additional credits in courses in the College of Arts and Letters and/or the College of Social Science approved by the student's academic adviser. Courses that are used to satisfy the University Integrative Studies and writing requirements may not be used to satisfy this requirement.

   1 Core course that must be completed in order for a student to be considered for admission to the major.
GRADUATE STUDY

Graduate study may lead to a Master of Arts, Master of Science, Master of Urban and Regional Planning or Doctor of Philosophy degree. The School has expertise and facilities available for advanced study and research in the following areas: Construction Management, Environmental Design, Interior Design, and Urban and Regional Planning. The School offers programs leading to graduate degrees in the following fields:

Master of Arts
   Environmental Design
   Interior Design and Facilities Management

Master of Science
   Construction Management

Master of International Planning Studies
   International Planning Studies

Master of Urban and Regional Planning
   Urban and Regional Planning

Doctor of Philosophy
   Construction Management

The Master of International Planning Studies degree program with a major in international planning studies and the Master of Urban and Regional Planning degree program with a major in urban and regional planning are offered through the College of Social Science. For information about those programs, refer to the statement on the School of Planning, Design, and Construction in the College of Social Science section of this catalog.

CONSTRUCTION MANAGEMENT

The Master of Science degree program with a major in construction management is designed to provide breadth in the managerial, technological, economic, and environmental aspects of construction. The program is also designed to provide depth through a systems approach encompassing project management, estimating, scheduling and project controls, land acquisition and development, architectural and engineering design, construction technology, real estate, finance, business management, and marketing.

The master’s program in construction management is available under either Plan A (with thesis) or Plan B (without thesis). Students who anticipate careers in teaching, consulting, or research, or who plan to pursue a doctoral program, are encouraged to select Plan A. After the student’s academic adviser has approved the student’s program of study under Plan A, the student may not pursue the program under Plan B without the approval of the School.

Students who are enrolled in the master’s program in construction management often take courses in business management, labor and industrial relations, civil engineering, human environment and design, resource development, urban planning, statistics, or education, in addition to courses in the major. Students may work directly with one or more faculty members on an independent basis to cover material that is not available through regular courses.

Master of Science

In addition to meeting the requirements of the University and of the College of Agriculture and Natural Resources, students must meet the requirements specified below.

Admission

To be considered for admission to the master's degree program in construction management, an applicant must take the Graduate Record Examination General Test and have the scores submitted to the department.

To be admitted to the program on regular status, an applicant must:
1. Have a Bachelor of Science degree in construction management or in a related area such as architecture, business, design, engineering, management, or urban planning.
2. Have a cumulative grade-point average of at least 3.00 (on a 4.00 scale) for the undergraduate program.
3. Have experience in the construction industry acceptable to the department.
4. Have completed as part of the undergraduate program 3 semester credits of introductory calculus (MTH 124 Survey of Calculus I or its equivalent), 3 semester credits of introductory physics (PHY 231 Introductory Physics I or its equivalent).

Applicants who have not completed the credits referenced in item 4. above may be admitted on provisional status. In addition, students may be required to complete specified collateral courses, from the following list, with a grade-point average of at least 3.00. These courses will not count toward the degree. The guidance committee will determine which courses are required as collateral courses for each applicant.

Requirements for the Master of Science Degree in Construction Management

The student must complete a total of 30 credits for the degree under Plan A (with thesis) or 33 credits for the degree under Plan B (without thesis). For students who elect independent study courses, including Construction Management 890, no more than 6 credits under Plan A and 9 credits under Plan B may be counted toward the requirements for the degree. The student’s program of study must be approved by the student’s academic adviser and must meet the requirements specified below:

CREDITS

Requirements for Plan A
1. A minimum of 18 credits in 800–900 level courses.
2. All of the following courses:
   - CMP 817 Construction Management Information Systems .................. 3
   - CMP 822 Legal Issues in Construction ........................................... 3
   - CMP 892 Construction Management Research Seminar ................... 2
3. One additional 800-level Construction Management courses, excluding Construction Management 890, 886, and 899. Students without a background in construction project scheduling and estimating must complete Construction Management 811 and 815 in partial fulfillment of this requirement.
4. One graduate course in research methods.
5. One 400-level course or above in statistics.

Additional Requirements for Plan A
1. Complete 6 credits of Construction Management 899. No more than 6 credits may be counted toward the requirements for the degree under Plan A.
2. Complete and defend a master’s thesis acceptable to the student’s guidance committee.

Requirements for Plan B
1. A minimum of 24 credits in 800–900 level courses.
2. All of the following courses:
The student must:

1. Complete 9 credits in the following core courses:
   - CMP 817 Construction Management Information Systems ........ 3
   - CMP 822 Legal Issues in Construction .......................... 3
   - CMP 892 Construction Management Research Seminar .......... 2

3. One additional 800-level Construction Management course, excluding Construction Management 890, 898, and 899. Students without a background in construction project scheduling and estimating must complete Construction Management 811 and 815 in partial fulfillment of this requirement.

4. One 400-level course or above in statistics.

Additional Requirements for Plan B
1. Successful completion of a final examination given by the guidance committee.

2. Complete a minimum of four additional courses related to construction management as specified by the student's guidance committee. ....... 12

3. Pass both a written and oral comprehensive examination.

5. Complete and successfully defend a dissertation in an area related to construction management.

Transfer Credits
No more than 9 semester credits of graduate course work (excluding research and thesis credits) may be transferred from other recognized educational institutions.

Doctor of Philosophy
Advances in modern construction technologies and methods underscore the need for sound and rigorous management of construction processes, organizational structures, business models, and the capability of integrating technology and management to create value for the user. The Doctor of Philosophy in Construction Management will provide students with the ability to conduct research on construction management including management theories and their applications in various sectors of the construction industry and to serve as professionals in the field of construction management.

Students in the program will have opportunities to study topics including: construction project management, construction technology, lean construction, sustainable built environment, international project management, and facilities management.

Admission
To be considered for admission to the Doctor of Philosophy degree program in Construction Management, an applicant must submit scores on the Graduate Record Examination (GRE) General Test or the Graduate Management Admission Test (GMAT).

To be admitted to the Doctor of Philosophy degree program in Construction Management on regular status, a student must have:
1. completed a master's degree program in a related field.
2. acceptable scores on the GRE General Test or the GMAT.

Provisional admission may be granted to an applicant who does not meet the above requirements but demonstrates outstanding potential.

In addition to meeting the requirements of the University and of the College of Agriculture and Natural Resources and the College of Social Science, the student must meet the requirements specified below.

Guidance Committee
The guidance committee should be comprised of at least four faculty members. The Chairperson and one other committee member should be from the doctoral focus area within the School, a third member should be from another doctoral focus area within the School, and a fourth member from outside the School.

The student must:

1. Complete 9 credits in the following core courses:
In addition to meeting the requirements of the University and the College of Agriculture and Natural Resources, students must meet the requirements specified below.

Requirements for the Master of Arts Degree in Environmental Design

Students in the Master of Arts in Environmental Design must complete a total of 33 credits for the degree under either Plan A (with thesis) or Plan B (without thesis). A minimum of 17 of those credits must be at the 800-level or above, distributed as follows:

1. All of the following core courses (9 credits):
   - LA 816 Environmental Design Theory ........................................ 3
   - LA 817 Environmental Design Studio ......................................... 3
   - LA 883 Environmental Design Seminar .................................... 3

2. Guided elective courses related to the student’s area of design interest, chosen in consultation with the student’s academic adviser.

For Plan A, students must complete a minimum of 6 and a maximum of 9 credits of Master’s Thesis Research (899) in one of the following departments: Horticulture; or Community, Agriculture, Recreation and Resource Studies. They must also prepare a written thesis, complete a final research seminar, and pass an oral examination.

For Plan B, students must complete a minimum of 6 and a maximum of 9 credits of Master’s Research (898) in the department of Horticulture. They must also complete a final report and pass an oral examination.

INTERIOR DESIGN AND FACILITIES MANAGEMENT

Master of Arts

The program is designed to provide students with advanced knowledge in one of three major areas of specialization: facilities design and management, human shelter, and interior design preservation and conservation. Internships are available.

Admission

Students must have undergraduate preparation and competencies in the areas of interior design, architecture, business, history, housing, or other areas as appropriate to their chosen specialty within the M.A. degree program.

Requirements for the Degree

Students must complete required core courses, the requirements for one of the major areas of concentration referenced above, a required research component, and the requirements for a minor area.

DEPARTMENT of PLANT PATHOLOGY

Richard E. Triemer, Chairperson

The Department of Plant Pathology is administered jointly by the College of Agriculture and Natural Resources and the College of Natural Science. The Department of Plant Pathology offers Master of Science and Doctor of Philosophy degree programs in plant pathology. The requirements for admission and the requirements for the degree are specified in the statement on Interdepartmental Graduate Programs in Plant Breeding and Genetics. Students who are enrolled in Master of Science degree programs in the Department of Plant Pathology may elect a Specialization in Ecology, Evolutionary Biology and Behavior. For additional information, refer to the statement on the Specialization in Ecology, Evolutionary Biology and Behavior in the College of Natural Science section of this catalog.

PLANT BREEDING AND GENETICS–PLANT BIOLOGY

The Department of Plant Biology offers Master of Science and Doctor of Philosophy degree programs in plant breeding and genetics–plant biology. The requirements for admission and the requirements for the degree are specified in the statement on Interdepartmental Graduate Programs in Plant Breeding and Genetics.

DEPARTMENT of PLANT BIOLOGY

Richard E. Triemer, Chairperson

The Department of Plant Biology is administered jointly by the College of Agriculture and Natural Resources and the College of Natural Science. The department offers Master of Science and Doctor of Philosophy degree programs with majors in plant breeding and genetics–plant biology through the College of Agriculture and Natural Resources. Those programs are referenced below. The department also offers Master of Science and Doctor of Philosophy degree programs with majors in plant biology through the College of Natural Science. For information about those programs, refer to the statement on the Department of Plant Biology in the College of Natural Science section of this catalog.

The Department of Plant Biology is affiliated with the Doctor of Philosophy degree program with a major in ecology, evolutionary biology and behavior. For information about a Doctor of Philosophy degree program that involves ecology, evolutionary biology and behavior and a major in the Department of Plant Biology, refer to the statement on the doctoral program in ecology, evolutionary biology and behavior in the College of Natural Science section of this catalog.

PLANT BREEDING AND GENETICS–PLANT BIOLOGY

The Department of Plant Biology offers Master of Science and Doctor of Philosophy degree programs in plant breeding and genetics–plant biology. The requirements for admission and the requirements for the degree are specified in the statement on Interdepartmental Graduate Programs in Plant Breeding and Genetics.

DEPARTMENT of PLANT PATHOLOGY

Raymond Hammerschmidt, Chairperson

The Department of Plant Pathology is administered jointly by the College of Agriculture and Natural Resources and the College of Natural Science. Plant pathology is concerned with fundamental relationships involving the diseased plant. This includes study of the interaction between the plant, its environment, and, in most instances, a microorganism or virus. Ecological, morphological, biochemical, and physiological aspects of plant disease development are studied in relation to the more specialized fields of molecular biology, cellular biology, virology, bacteriology, mycology, genetics, and others. Plant pathological research also contributes to fundamental biology, as well as to practical plant disease control.

UNDERGRADUATE PROGRAM

The Department of Plant Pathology offers a Bachelor of Science degree in Plant Pathology. Earning a Bachelor of Science degree in plant pathology will prepare graduates for careers in agricultural industries, government programs (state, national and international), as well as for graduate study in plant pathology and numerous other fields in agriculture and natural science. The Bachelor of Science in Plant Pathology major enables students to take a substantial number of fundamental sciences courses as well as a large number of more applied courses related to plant diseases and agriculture. Course work in this vigorous curriculum offers a balance between fundamental and applied study. Those students who take a large number of fundamental courses may choose to attend graduate school. The actual numbers of fundamental versus applied courses that qualify a student for career or graduate opportunities vary greatly.
Requirements for the Bachelor of Science Degree in Plant Pathology

1. The University requirements for bachelor’s degrees as described in the Undergraduate Education section of this catalog; 120 credits, including general elective credits, are required for the Bachelor of Science degree in Plant Pathology.

2. The University’s Tier II writing requirement for the Plant Pathology major is met by completing Plant Pathology 405 and 498.

Students who are enrolled in the Plant Pathology major leading to Bachelor of Science degree may complete the alternative track to Integrative Studies in Biological and Physical Sciences that consists of the following courses: Chemistry 141, 143, and 161; and Plant Biology 105 and 106. The completion of Chemistry 141, 143, 161 and Plant Biology 105 and 106 may be counted towards both the alternative track and the requirements for the major referenced in item 3.

3. The following requirements for the major:

   a. All of the following courses: ................................................. CREDITS 48 or 50
      BOT 105 Plant Biology ....................................................... 3
      BOT 106 Plant Biology Laboratory ........................................ 1
      BOT 301 Introductory Plant Physiology ................................. 3
      BOT 402 Biology Fungi ....................................................... 3
      CEM 141 General Chemistry ............................................... 4
      CEM 143 Survey of Organic Chemistry ................................ 4
      or
      CEM 251 Organic Chemistry I ............................................ 3
      CEM 161 Chemistry Laboratory I ......................................... 1
      CEM 252 Organic Chemistry II ............................................ 3
      CSS 350 Introduction to Plant Genetics ................................ 3
      MMG 301 Introductory Microbiology .................................... 3
      MTH 124 Survey of Calculus I ............................................. 3
      or
      STT 201 Statistical Methods .............................................. 4
      PHY 231 Introductory Physics I ........................................... 3
      PLP 101 Current Issues and Frontiers in Plant Pathology .............. 1
      PLP 405 Introductory Plant Pathology .................................. 3
      PLP 407 Diseases and Insects of Forest and Shade Trees .............. 4
      PLP 492 Seminar ............................................................... 2
      PLP 493 Plant Pathology Internship .................................... 3
      PLP 498 Undergraduate Research ........................................ 3
   
   b. One of the following courses or pair of courses (3 credits):
      CSS 101 Introduction to Crop Science .................................. 3
      FOR 202 Introduction to Forestry ....................................... 3
      HRT 203 Principles of Horticulture I .................................... 2
      and
      HRT 203L Principles of Horticulture I Laboratory .................... 1
   
   c. One of the following courses (3 or 4 credits):
      CSS 210 Fundamentals of Soil and Landscape Science ............... 3
      CSS 402 Principles of Weed Science .................................... 3
      ENT 404 Insects: Success in Biodiversity ............................... 4
      ZOL 355 Ecology ............................................................. 3
   
   d. One of the following courses (4 credits):
      BOT 416 Experiments in Plant Physiology and Molecular Biology .................. 4
      CSS 451 Cellular and Molecular Principles and Techniques for Plant Sciences .................. 4
   
   e. One of the following courses (3 or 4 credits):
      ENT 478 Pest Management II: Biological Components of Management Systems (W) .................. 3
      ENT 478 Pest Management II: Biological Components of Management Systems .................. 3
      MLP 362 Management of Turfgrass Pests ................................ 4
   
   f. One of the following courses or pair of courses (3 to 6 credits):
      BMB 401 Basic Biochemistry ................................................ 4
      BMB 461 Biochemistry I ..................................................... 4
      BMB 462 Biochemistry II ................................................... 3
      CEM 142 General and Inorganic Chemistry ............................... 3

Students desiring to study plant pathology may also emphasize fundamental science, biotechnology, plant protection, or agribusiness management, and modify their programs accordingly with approval of their academic adviser and the department chairperson.

It is required that a grade point average of 2.0 be obtained in major courses (Plant Pathology 101, 405, 407, 492, 493, and 498) in order for a B.S. Degree in Plant Pathology to be awarded. Students who take Biochemistry and Molecular Biology 401, 461 and 462, and Crop and Soil Sciences 451 in addition to Plant Pathology major requirements, may also take Horticulture 486 to complete the College of Agriculture and Natural Resources requirements for the Specialization in Agricultural and Natural Resources Biotechnology.

GRADUATE STUDY

The department offers Master of Science and Doctor of Philosophy degree programs with a major in plant pathology. Students enrolled in the Doctor of Philosophy degree program may elect a specialization in biotechnology. For additional information, refer to the statement on the specialization.

Students who are enrolled in Master of Science degree programs in the Department of Plant Pathology may elect a Specialization in Food Safety. For additional information, refer to the statement on the specialization in the College of Veterinary Medicine section of this catalog.

Master of Science

Plant pathology graduate students may study in one or more emphasis areas, including phytobacteriology, mycology, virology, epidemiology, host parasite interactions, soil microbiology, disease management and molecular biology. Commodity-oriented strategic research areas in which the above emphasis areas may be studied include vegetable crops, fruit crops, nursery, landscape and ornamentals, field crops, turf crops, and forest and tree pathology. Students are urged to take courses which provide a broad background in biological and physical sciences in addition to training in specialized areas.

In addition to meeting the requirements of the University and the College of Agriculture and Natural Resources, students must meet the requirements specified below.

Admission

Regular admission may be granted to those students who have a bachelor’s degree or its equivalent, a 3.00 grade point average, and appropriate training in the biological and physical sciences and mathematics. Provisional admission may be granted to those students who do not meet the requirements for regular admission.

Requirements for the Master of Science Degree in Plant Pathology

The master’s degree program in plant pathology is available under either Plan A (with thesis) or Plan B (without thesis). The student’s program of study is arranged by a guidance committee which includes the major professor.

For both Plan A and Plan B, students must:

1. Complete at least 30 credits including at least two graduate-level seminar courses in the biological sciences, one of which must be Plant Pathology 894.
2. Acquire teaching experience by assisting in at least one course.
3. Demonstrate a reading knowledge of a foreign language if required by the guidance committee.

Additional Requirement for Plan A:

Pass a final oral examination in defense of the thesis.

Additional Requirement for Plan B:

Pass a final examination or evaluation.
Doctor of Philosophy

The objective of this program is to provide a high quality plant pathology graduate experience to equip students with the skills necessary for research, teaching and extension, or other agriculture-related positions that require the Ph.D. degree.

In addition to meeting the requirements of the University and the College of Agriculture and Natural Resources, students must meet the requirements specified below.

Admission

Regular admission may be granted to those students having a master’s degree or its equivalent, a 3.00 grade point average, and appropriate training in the biological and physical sciences and mathematics. Outstanding students without a master’s degree may be accepted.

Provisional admission may be granted to those students who do not meet the requirements for regular admission.

Requirements for the Doctor of Philosophy Degree in Plant Pathology

All doctoral students in plant pathology must meet the requirements specified below:

1. Pass a preliminary examination.
2. Acquire teaching experience by assisting in two courses.
3. Complete:
   a. All of the following courses:
      - PLP 405 Introductory Plant Pathology ................... 3
      - PLP 810 Current Concepts in Plant Pathology ........... 3
      - PLP 894 Seminar in Plant Pathology .................... 2
   b. One of the following courses:
      - PLP 812 Epidemiology of Plant Diseases ................ 3
      - PLP 880 Plant Virology .................................. 4
      - PLP 881 Molecular and Biochemical Plant Pathology ... 3
      - PLP 885 Plant Diseases in the Field .................... 2
   c. Two of the following courses:
      - ENT 870 Nematode Management in Crop Systems ........ 3
      - PLP 847 Advanced Mycology ............................... 4
      - PLP 880 Plant Virology .................................. 4
      - PLP 884 Prokaryotic Diseases of Plants ................ 4
4. Additional requirements such as reading knowledge of a foreign language may be required by the guidance committee.
5. Pass a written comprehensive examination.

PROGRAMS

Applied Plant Science

Employment and career opportunities continue to expand for those who have training and educational preparation in applied plant science. In response to this regional plant industry need, Northwestern Michigan College (NMC) and Michigan State University offer a combined program, which enables students to complete an NMC Associate of Applied Science degree as well as an MSU Institute of Agricultural Technology certificate - without leaving northern Michigan.

Bringing together the world-acclaimed expertise of Michigan State University’s College of Agriculture and Natural Resources and the “close to home” convenience of an outstanding community college - Northwestern Michigan College in Traverse City – the Applied Plant Science program prepares graduates for a wide range of employment and career choices. Each student receives personal, one-on-one help in selecting her/his program of study (including workplace internship). Students may earn their certificate in Applied Plant Science with options in Commercial Horticulture Operations or Commercial Turfgrass Operations.

Dairy Production

Because dairy farming is among the leading agricultural enterprises in Michigan, the dairy program has been developed to meet the specialized needs of the herd manager and commercial dairy farmer. Opportunities abound for persons with the combination of classroom training in the areas of dairy husbandry, nutrition, artificial insemination, crops, and farm management and the practical experience that may be obtained on any of the many cooperating dairy farms in Michigan and the surrounding states.

Programs of study tailored to meet the individual’s wants and needs are designed around the subject matter areas of agricultural economics, communications, crop and soil sciences, and agricultural mechanics. Additionally, students learn about the continuing changes in rural living, which have a great influence on agriculture.

Beef Cattle Management

This program allows specialization in the area of beef cattle management in a one-year intensified program. It provides knowledge and experience in the management of both cow/calf and feedlot enterprises. There is a demand for industrious young people with practical experience to fill positions of responsibility as herd managers, assistant herd managers, and other livestock-related jobs.

Agriculture, in this rapidly changing era, requires aggressive young people who have specialized training in modern scientific practices. While the demands for success are great, the opportunities for success are limited only by a person’s desires or imagination.
Horse Management
The horse management program places emphasis on acquisition of equine husbandry skills that will prepare students for jobs in the ever-growing horse industry or for the management of their own farms and horses. Students are required to complete a one-semester placement training experience working with professionals in the horse industry. Study abroad opportunities may also be incorporated into the student’s program. The horse industry has exciting job opportunities for students who have a passion for horses and a strong work ethic. Students who complete this program will be prepared for positions ranging from assistant trainers to managers of small farms and from racetrack grooms to tack and equipment sales personnel.

Swine Management
Food production, including that of pork, is increasing along with the world’s population due to the use of scientific technologies and skilled people. If we are to keep pace with the growing population, we will need more of these two vital inputs. The tasks of developing new technologies and new human resources are equally challenging.

The swine management program is designed to prepare people for careers in modern pork production anywhere in the world. The one-year program judiciously balances “hands-on” training with classroom instruction in the areas of animal care, nutrition, housing maintenance, swine health, reproduction, records management, environmental management and personnel management. Students also gain practical experience through a summer-long internship on a commercial swine farm in Michigan or beyond. Swine management graduates will have numerous career opportunities including: farm owners/operators, managers or assistant managers (breeding herd, farrowing, nursery, grower-finisher, transportation, feeds, marketing), department supervisors or regional representatives.

Electrical Technology
There is a need for highly trained electricians. Electrical contractors need electricians capable of planning complex wiring and solving difficult wiring problems. Wiring systems today are complex. In some cases, equipment breakdowns must be repaired promptly to avoid devastating losses.

The Electrical Technology program is a complete electrical apprenticeship program recognized by the State Electrical Administrative Board. Graduates of the program receive credit for two years of experience by completing only 15 months of training. Four years of experience are required for the State Journeyman Electrician License Exam.

The program covers residential, farm, commercial, and industrial wiring; single and three phase motors and generators; electrical control systems wiring, design and troubleshooting; lighting system design; electrical system design; heating; animal and human environment control; electrical estimating; and electrical business management.

Agricultural Industries
One of every six jobs in the American economy is related to agricultural and food businesses. The curriculum in the Agricultural Industries program is designed to provide students with the technical and business skills necessary to be successful in any of these related fields. Career opportunities range from managing a farm or business (cash crop, animal, or fruit/vegetable) to working in the banking or farm credit industries. Ample opportunities are available in the management of farm supply stores or cooperatives, in agricultural input sales, in the insurance field, or in a number of agricultural processing and manufacturing industries.

The Agricultural Industries program allows students to customize their educational program to fit their own personal career goals. This program has two main areas of study – agronomy and business. However, the student who has an interest in the animal industry may obtain foundational knowledge in the species of his/her choice.

Attractive starting salaries are offered. Advancement opportunities are excellent for those who prove themselves on the job. Initiative and ability determine how fast progress can be made towards a management position.

Landscape and Nursery
The current demand for landscape horticulturists is due to the rapid expansion in industrial and home landscapes as well as city, state, and environmental improvement projects. Graduates of the program work as owners, managers, buyers, or salespersons in retail firms, commercial landscape construction, and nursery production firms as well as for private enterprises.

The program combines the theories and principles of classroom instruction with the practical experience of placement training. Although the emphasis is on landscape and nursery, other important aspects of a college education are included. Students are required to take courses in fields such as communications, botany, biochemistry, soil science, plant diseases, and personnel practices.

The Landscape and Nursery Program is offered by the Department of Horticulture in cooperation with the Institute of Agricultural Technology.

Turfgrass Management
A rapidly expanding turfgrass industry offers many challenging job opportunities for trained personnel. The growing demand for recreational areas and re dedication to the maintenance of beauty in America has created a shortage of turfgrass specialists.

Golf Course Emphasis
The golf course emphasis provides the fundamentals of turfgrass technology necessary primarily for the supervision and management of golf courses. Attractive starting salaries and many job opportunities are available with excellent potential for advancement. Previous work experience on a golf course maintenance crew is expected.
Sports and Commercial Turf Management Emphasis

The sports and commercial turf management emphasis is designed for persons interested in careers in these areas. These are rapidly growing areas of turfgrass management and offer rewarding job opportunities.

Program offerings in both emphasis areas are integrated with other areas in turfgrass and landscape and nursery. Courses include technical, communication, mathematics, and business content. Placement training opportunities are offered at many leading industrial businesses.

Viticulture and Enology

With the expansion of the grape and wine industry in the Midwest, there is an increasing demand for experienced individuals who have technical and practical knowledge in grape and wine production. Michigan has over 12,000 acres of grapes, approximately 500 grape growers, and 25 wineries, and is continually growing. Its central location to many grape and wine-producing regions makes Michigan an ideal location for viticultural and enological studies.

The Department of Horticulture, in cooperation with the Institute of Agricultural Technology, offers two technical training programs that focus on grape and/or wine production issues specific to the Midwest and Great Lakes region. Students are educated to manage the unique conditions and concerns of cool-climate regions.

Michigan State University has a well-established research program, a fully-equipped laboratory and winery, and a vineyard, all located near campus. These facilities are used for field instruction, such as training in vineyard and winery establishment and production techniques, which complements classroom instruction.

Admission

Applicants for technical programs must be high school graduates. A strong background in communications, mathematics, and science will help prepare the student for successful completion of a technical training program.

The admission process includes a consideration of the student's academic record, work experience, recommendations from employers, test scores, and other criteria. In some cases, students may be invited to Michigan State University for an interview.

Financial Aid

Institute of Agricultural Technology students are eligible for financial aid. Scholarships are provided by industry groups and individual business firms and are awarded to students who have demonstrated superior scholastic ability or an outstanding work record.

Veterans Education

The programs offered by the Institute of Agricultural Technology are approved by the Department of Veterans Affairs as Cooperative Veterans Training Programs. Under some Chapters of Title 38, U.S. Code, veterans may receive educational benefits. Veterans planning to enroll should contact the Veterans Certification Section of the Office of the Registrar to determine their eligibility.

Michigan Works

Students in the Institute of Agricultural Technology are eligible for sponsorship under the guidelines of the Michigan Works Program. Students must arrange sponsorship with the appropriate Michigan Works office.

MICHIGAN AGRICULTURAL EXPERIMENT STATION

John C. Baker, Acting Director

The research programs of the Michigan Agricultural Experiment Station (MAES) help to keep Michigan agriculture competitive, foster stewardship of natural resources, keep the food system safe, build stronger families and communities, and spur economic development in the state’s cities, regions and industries.

The mission of the MAES, to generate knowledge through strategic research that helps Michigan, is an integral part of MSU’s responsibilities as a land-grant university.

Based in the College of Agriculture and Natural Resources (CANR), the MAES is a network of laboratories and field stations across the state. More than 300 scientists from twenty-seven academic departments, research institutes and laboratories receive support from the MAES. Beyond CANR, the MAES is affiliated with the College of Natural Science, the College of Social Science, and the College of Veterinary Medicine.

The MAES helps Michigan agriculture compete nationally and globally by developing ways to increase production efficiency, improve product quality, and meet market needs. Other research focuses on food and health issues, including nutritional immunology, food security, emerging and re-emerging infectious diseases, and agro-security. Research also concentrates on community and economic development, youth mentoring, recreation and tourism, land cover policy, and water quality and watershed management.

In East Lansing, MAES research is conducted in laboratories, greenhouses, and several south campus experimental plots. The 15 off-campus field stations range from a tree research center in the Upper Peninsula to fruit and vegetable research farms in the southernmost counties of the state.

The MAES, like the larger land-grant tradition of which it is a part, is about more than agriculture. It is about an idea for higher education that combines practical information with traditional scientific studies to generate knowledge for a rapidly changing state and nation.

Organized under the Hatch Act of 1887, the MAES has been part of MSU for most of the university’s 150-year history. Funding comes from the state and federal governments, commodity associations, industries, foundations, and individuals.
Development Programs provide education and technical assistance in Michigan State University Extension’s Community and Economic Development Programs. These programs require a comprehensive focus. Programming in agriculture and natural resources addresses the complexities of Michigan’s agricultural and natural resource sectors. The Agriculture and Natural Resources Programs are based in the nation’s land-grant universities and funded jointly by the U.S. Department of Agriculture, state and local governments. Extension programming is focused in three basic areas:

### Agriculture and Natural Resources Programs

The complexities of Michigan’s agricultural and natural resource sectors require a comprehensive focus. Programming in agricultural technologies, management, and effective marketing helps commercial producers use cutting-edge production practices and business management to maximize their profits while protecting the environment. Educational assistance in natural resources topics helps citizens and leaders manage the state’s natural resources responsibly and effectively. They need up-to-date information and technology to make wise stewardship decisions related to land use management, planning and zoning, and environmental quality.

Extension agricultural programs are designed to help growers efficiently produce commodities, assure adequate supplies of high-quality agricultural products, maintain profitable farm operations and keep the state’s multibillion-dollar agricultural industry competitive in national and world markets.

The same knowledge and expertise available to commercial agriculture is offered also to small farms, specialty growers and part-time producers. In addition, Extension directs a strong program to assist home gardeners and landscapers.

Extension programs in natural resources emphasize wise use and conservation of forests, water and wildlife; planning and maintaining orderly community development for social and economic progress and environmental quality; and Great Lakes development and coastal resource management through the Michigan Sea Grant Program.

### Economic and Community Development Programs

Michigan State University Extension’s Community and Economic Development Programs provide education and technical assistance to local government officials, operators of small and medium-sized businesses, economic and community development organizations, and other groups involved in local decision-making and actions to enhance economic well-being and quality of life in Michigan.

Responding to the needs of both businesses and communities means focusing on issues related to business and community vitality, economic development, employment and income, growth management, local government operation and inter-governmental cooperation, understanding, participation and decision-making. Current programs center attention on increasing economic competitiveness in business; initiating or enhancing industry-specific programs in forestry and wood products, food processing, and tourism; improving economic and human resource development programs; and providing public affairs and public policy education for local government officials and citizens.

Programs promote active and representative citizen participation that encourage residents to influence decisions that affect them meaningfully; engage community members in problem identification to improve understanding of the local situation; help community members understand the possible economic, social, political, environmental and psychological impacts of alternative solutions to problems; and to assist community members in using shared leadership, partnerships and other collaborative efforts to design and implement plans to solve local problems.

### Children, Youth and Family Programs

Michigan State University Extension Children, Youth and Family Programs address the needs and priority issues affecting people throughout their lives. Programs bring together the expertise of professionals in Human Ecology, 4-H youth programs and Family and Consumer Science programs to deliver learning opportunities that recognize the interrelationships between children, young people, families and the communities in which they live.

This diverse group of staff members—in collaboration with other educators, researchers, agencies, organizations, community leaders and volunteers—help build effective coalitions to enable children, youth and families to develop their full potential as leaders and initiate positive change throughout their lives.

4-H Youth Development relies on volunteers to provide positive, hands-on educational opportunities with and for young people. 4-H programs help create environments that promote the development of strong, healthy young people who are prepared to succeed in today’s complex and changing world.

4-H programs are available to young people ages 5 to nineteen. Trained volunteers conduct hands-on learning activities in a wide variety of settings, including clubs, community and learning centers, schools and camps. Often 4-H works through partnerships with other youth-serving organizations, human service agencies, business and industry, government and educational groups.

Family Consumer Science programs help families identify needs and offer education to improve the quality of life at home and in the community. Priority target audiences include limited-resource families, parents with young children, adult children of aging parents and senior citizens. Content includes nutrition and health, money management, parenting education and human development.
The Institute of International Agriculture is administered jointly by Daniel C. Clay, Director

**AGRICULTURE**

**INTERNATIONAL**

**INSTITUTE of food and natural resource systems while building capacity for policy, managers, board members and entrepreneurs of agricultural, food and natural resource sectors.** The Center has three interrelated programs: the ANR Innovation Counselors Network, the Strategic Marketing Institute, and the Innovation Academy. They deliver coordinated responses to entrepreneurs and managers who are developing and commercializing high value, consumer responsive products and businesses with a natural resource or agricultural base.

The ANR Innovation Counselors Network, the outreach arm, is the local contact for entrepreneurial groups and existing businesses. Its counselors nurture new market and product development opportunities. At the Center level, project specialists assist counselors or firms directly by tapping into MSU’s technical expertise. Project specialists also collaborate with external consultants, industry groups and governmental agencies.

The Strategic Marketing Institute, the marketing arm, develops the information base needed to support initial screening and evaluation of concepts, products and businesses. It produces long-range studies for Michigan’s agricultural, food and natural resource sectors. Each study includes an assessment of: core competencies, competitive advantages, strategic resource bases, supply chain configuration, promising business or product areas, future scenarios, and key strategic issues for the particular sector such as the commercialization of new technologies arising from University research.

The Innovation Academy, the leadership arm, meets the needs of managers, board members and entrepreneurs of agricultural, food and natural resource systems while building capacity for potential new industry leaders.

### INSTITUTE of WATER RESEARCH

**Jon Bartholic, Director**

The Institute of Water Research was established by Michigan State University in 1961 to promote and coordinate water research, education, and advisory services for the inland waters and Great Lakes of Michigan.

The Institute develops interdisciplinary plans and research programs, assists in the development of departmental resources in support of water research, and provides a focal point to which the University community and off-campus groups can turn for advice and assistance. It is one of 54 state centers designated by the U. S. Geological Survey, U. S. Department of the Interior, to administer research funds authorized under PL 98–242, the Water Research Resources Act of 1984. With this base and through private, state, and federal funds, research projects are sponsored and facilities and services are provided for many departments on campus and in other universities. The active research programs include aspects of socio–economic water planning, water conservation, groundwater education, water quality, agriculture, fisheries, advanced waste utilization and treatment, limnology, and other disciplines. Graduate students in academic departments are supported with funds administered through the Institute.

The Institute serves as a center for the dissemination of technical and nontechnical information on water research by maintaining extensive current documentation; publishing a monthly newsletter; convening conferences; and developing the Inland Lakes Research and Study Center, a research and demonstration facility for lake management strategies. The Institute and the Center for Remote Sensing have formed the Land and Water Systems Partnership. The Institute also manages the Groundwater Education in Michigan (GEM) Program, assisting local governments and citizens groups to develop local groundwater education programs.

### INSTITUTE of INTERNATIONAL AGRICULTURE

**Daniel C. Clay, Director**

The Institute of International Agriculture is administered jointly by the College of Agriculture and Natural Resources and International Studies and Programs. This Institute is responsible for international activities in the fields of agriculture, natural resources, and related areas, both on campus and in other countries. Activities of the Institute include the broad areas of international training, research, overseas institution building, and rural development abroad.

The Institute is linked with the Colleges of Natural Science, Human Ecology, and Veterinary Medicine. When appropriate, the Institute interacts with additional colleges such as The Eli Broad College of Business, Education, Human Medicine, Osteopathic Medicine, and Veterinary Medicine.

Approximately 250 graduate students from 70 countries are enrolled in the College of Agriculture and Natural Resources. Each year more than 200 international agricultural scientists visit the College to discuss problems and areas of mutual interest. Formal and informal linkages with more than 20 institutions around the world provide for the exchange of faculty, graduate students, technical information and publications, and seed stock.

Agricultural and natural resources faculty and students are active throughout the world, in both developed and developing countries. Many are concerned with research projects dealing with specific agricultural areas, while the remainder are technical advisers to higher agricultural education and research institutions in the developing countries.

More than 24 courses involving international agriculture and natural resources are available through interdisciplinary and departmental offerings.

### MSU PRODUCT CENTER for AGRICULTURE and NATURAL RESOURCES

**H. Christopher Peterson, Director**

The MSU Product Center for Agriculture and Natural Resources was established in 2003, by the Michigan Agricultural Experiment Station and Michigan State University Extension, to improve economic opportunities in the Michigan agriculture, food and natural resource sectors. The Center has three interrelated programs: the ANR Innovation Counselors Network, the Strategic Marketing Institute, and the Innovation Academy. They deliver coordinated responses to entrepreneurs and managers who are developing and commercializing high value, consumer responsive products and businesses with a natural resource or agricultural base.

The ANR Innovation Counselors Network, the outreach arm, is the local contact for entrepreneurial groups and existing businesses. Its counselors nurture new market and product development opportunities. At the Center level, project specialists assist counselors or firms directly by tapping into MSU’s technical expertise. Project specialists also collaborate with external consultants, industry groups and governmental agencies.

The Strategic Marketing Institute, the marketing arm, develops the information base needed to support initial screening and evaluation of concepts, products and businesses. It produces long-range studies for Michigan’s agricultural, food and natural resource sectors. Each study includes an assessment of: core competencies, competitive advantages, strategic resource bases, supply chain configuration, promising business or product areas, future scenarios, and key strategic issues for the particular sector such as the commercialization of new technologies arising from University research.

The Innovation Academy, the leadership arm, meets the needs of managers, board members and entrepreneurs of agricultural, food and natural resource systems while building capacity for potential new industry leaders.
