The College of Engineering develops the abilities of its students so that they may continually progress with the advancing field of engineering and take part in the solution of technical as well as economic and social problems, which will arise during their lifetimes. Since engineering deals primarily with the adaptation of nature’s forces, materials, and energies for the benefit of society, our engineering programs are planned to provide future engineers with firm knowledge and understanding of the fundamental engineering sciences and of engineering methods for the application of this knowledge. Programs require a strong base in mathematics as a universal language and tool of the engineer. Since the engineer will always work with others, we build team-oriented experiences into each of our degree programs.

UNDERGRADUATE PROGRAMS

There is an opportunity for students to choose alternative paths of study leading to the Bachelor of Science degree:
1. Programs with a major in the engineering professional fields.
2. Programs with a major in engineering sciences.

Programs With a Major in the Engineering Professional Fields

The Bachelor of Science degree may be earned in programs designed to prepare students for work in biosystems engineering, chemical engineering, civil engineering, computer engineering, electrical engineering, materials science and engineering, and mechanical engineering.

Details of specific programs in these areas are given in sections that follow.

Programs With a Major in the Engineering Sciences

The Bachelor of Science degree may also be earned in engineering sciences with a major in computer science or applied engineering sciences. Flexibility is provided in the selection of major and minor subject matter areas for computer science, and the program permits the individual student to select study areas not included in the programs of the professional engineering fields. Students are encouraged to combine the computer science program with supporting studies from non-engineering areas such as business management, the social and behavioral or physical sciences, or a foreign language.

The Applied Engineering Sciences major is an interdisciplinary program that enables students to develop a broad foundation in the engineering sciences and core engineering disciplines and apply it to one of the available cognate areas. Opportunities are available for interaction between the College of Engineering, the Department of Supply Chain Management in The Eli Broad College of Business, and the Department of Telecommunication, Information Studies and Media in the College of Communication Arts and Sciences.

Engineering Study Abroad

The field of engineering increasingly requires a global perspective. Many outstanding study abroad opportunities exist within the College of Engineering for students to study in a variety of countries. Students often take major and university requirements during their semester abroad, so the international experience does not delay a student’s progress toward graduation. Students interested in studying abroad should contact the Engineering Study Abroad office as early as possible.
Biomedical Engineering Option

The biomedical engineering option is oriented toward biomechanics and biomaterials. The option is designed for students who plan to pursue graduate study in biomedical areas or to seek employment in selected medical areas.

The option, which is administered by the College of Engineering, is available as an elective to students who are enrolled in bachelor's degree programs in the College of Engineering or in other colleges.

With the approval of the department and college that administer the student's degree program, courses that are used to satisfy the requirements for the option may also be used to satisfy the requirements for the bachelor's degree.

Requirements for the Biomedical Engineering Option

The student must complete:

1. The following course (4 credits):
   - PSL 250 Introductory Physiology

2. One of the following courses (3 or 4 credits):
   - BS 110 Organisms and Populations
   - BS 111 Cells and Molecules

3. At least three of the following courses (9 credits):
   - BME 490 Independent Study
   - BME 491 Special Topics
   - ME 495 Tissue Mechanics
   - ME 496 Biodynamics
   - ME 497 Biomechanical Design
   - MSE 324 Biopolymers and Biocompatibility

Upon completion of the requirements for the biomedical engineering option, the student should contact the Associate Dean for Undergraduate Studies in the College of Engineering and request certification for the completion of the option. After the certification is approved by the Dean of the College of Engineering, the Office of the Registrar will enter on the student's academic record the name of the option and the date that it was completed. This certification will appear on the student's transcript.

Specializations

Students who are enrolled in bachelor's degree programs in The Eli Broad College of Business, the College of Communication Arts and Sciences, and the College of Engineering may elect a Specialization in Information Technology. For additional information, refer to the statement on Specialization in Information Technology in The Eli Broad College of Business section of this catalog or contact The Eli Broad College of Business.

Cooperative Engineering Education

Cooperative Engineering Education is a program of alternating full-time employment in industry and full-time study on campus. A typical schedule alternates semesters of employment and study. Five years are usually required to complete requirements for the degree.

Employment provides practical on-the-job experience by exposing students to types of work done by engineers. Salaries vary and are set by agreement between the student and the employer. Locations of jobs are nationwide. Students must be willing to live away from home and away from the campus.

Because employment cannot be guaranteed for all applicants, participation in the Cooperative Engineering Education program may be limited. Students are selected to participate in the program on the basis of demonstrated academic ability and a firm commitment to pursuing careers in the technical sector.

Certification in the Cooperative Engineering Education program requires a minimum of three semesters of full-time employment in a position in industry that has been approved by the College of Engineering. The student is required to be enrolled in EGR 393 Engineering Cooperative Education during each term of employment. Upon completion of the Cooperative Engineering Education program, the student should contact the College of Engineering and request certification for the completion of the program. After the certification is approved by the Dean of the College, the Office of the Registrar will enter on the student's academic record the name of the program and the date that it was completed. This certification of completion will appear on the student's transcript.

Students who are interested in the Cooperative Engineering Education program should contact the Office of Cooperative Education, 1410 Engineering Building, as early as possible.

Honors Study

The College of Engineering encourages honors students to develop distinctive undergraduate programs in either the engineering sciences or in the fields offered by the several professional departments. A member of the faculty is selected to serve as advisor to Honors College students in each major field, and it is the advisor's responsibility to help the student plan a rigorous and balanced program which will also reflect the student's special interests and competencies. Independent study experience is strongly encouraged when relevant to the student's total program.

Accreditation

The following degree programs have been accredited by the Accreditation Board for Engineering and Technology, Inc. (ABET): Biosystems Engineering, Chemical Engineering, Civil Engineering, Computer Engineering, Electrical Engineering, Materials Science and Engineering, and Mechanical Engineering.

Registration as a Professional Engineer

In Michigan, the State Board of Registration for Professional Engineers provides an opportunity for students during the senior year to take the first half of a sixteen-hour, two-part examination as the first step toward registration, provided the degree is to be awarded within six months and the degree program is one that has been accredited by the ABET or determined as equivalent by the State Board. After a minimum of four years of experience, the applicant may take the second half of the examination.

On completion of registration, an engineer establishes professional standing on the basis of legal requirements and receives authority to practice the engineering profession before the public.

Freshmen

Students admitted to the University are enrolled as Undergraduate University Division students, but may declare a pre-engineering major preference in the College of Engineering. Such students are assigned a professional adviser from the College. Students interested in engineering but not yet sure of a major may be an Engineering No-Preference major for up to two years, but students are encouraged to make their major selection as early as possible. Special attention should be given to program requirements so the first year or so may be used to become acquainted with the opportunities offered by the various engineering areas best suited to a student's talents.

Students who elect a pre-engineering major preference should be strongly prepared in mathematics and sciences. Additional work in these areas is highly desirable and may make advanced placement in courses possible. Students entering with less than the minimum mathematics prerequisites may take some of the necessary courses after entering the University. However, such
students will need additional time to complete the work for the degree.

Admission to the College
Admission to the College of Engineering and a specific major provides access to enroll in certain courses required for the major. Enrollments in the College of Engineering are limited.

Admission is based on the cumulative grade–point average of all courses taken and a grade–point average calculated on mathematics, physical and biological sciences, and engineering courses.

For additional information, students should contact the Office of the Associate Dean for Undergraduate Studies, College of Engineering.

Minimum criteria for admission to the College are:

1. Completion of at least 12 credits of MSU courses, including at least 6 credits in mathematics, physical and biological sciences, and engineering for freshmen and sophomores, and at least 10 credits in mathematics, physical and biological sciences, and engineering for juniors and seniors.
2. Completion of Mathematics 132 and 133.
3. A minimum grade-point average of 2.00 in all mathematics courses.
4. Completion of Chemistry 141 or 151 or approved substitution or waiver.
5. Completion of Physics 183.
6. Completion of Computer Science and Engineering 131 or 231 or approved substitution or waiver.

Freshmen and sophomores who have declared specific engineering majors (excluding Engineering No-Preference) are automatically reviewed at the end of every semester, and are either admitted or informed of their progress. Others may apply for admission during each semester, and applications will be reviewed after the end of each semester. Students must be admitted to a degree-granting college at the time they have completed 56 credits.

Admission to a Second Bachelor's Degree Program
Students seeking admission to a second bachelor's degree program must meet the same requirements as for admission to the College.

Graduation Requirements for All Majors

1. The University requirements for bachelor's degrees as described in the Undergraduate Education section of the catalog; 120 credits, including general elective credits, are required for the Bachelor of Science degree in Computer Science and Applied Engineering Sciences, 124 credits are required for the Bachelor of Science degree in Manufacturing Engineering, and 128 credits, including general elective credits, are required for the Bachelor of Science degree with majors in the other Engineering Professional Fields. A student electing advanced aerospace or military science studies may be required to earn part or all of the credits for that program in addition to the minimum credits required for graduation.

Students who are enrolled in majors leading to the Bachelor of Science degree in the College of Engineering may complete an alternative track to Integrative Studies in Biological and Physical Sciences that consists of the following courses:

- One of the following courses: Biological Science 110, 111; Plant Biology 105; Entomology 205; Microbiology and Molecular Genetics 205, 301; Physiology 250; Zoology 141.
- Two of the following courses: Chemistry 141, Chemistry 151, Physics 183 or 183B, Physics 184.
- One of the following laboratory courses: Biological Science 110, 111L; Plant Biology 106; Chemistry 161; Microbiology and Molecular Genetics 206; Physics 191.

Credits earned in the alternative track may also be counted toward College and major requirements for the Bachelor of Science degree.

2. The requirements of the College of Engineering for the Bachelor of Science degree that are listed below:

b. Chemistry 141 or 151. Computer Science majors are not required to complete Chemistry 141 or 151.

c. Physics 183 or 183B and 184.

d. Computer Science and Engineering 131 or 231.

Students who are enrolled in bachelor's degree programs in the College of Engineering may elect a Specialization in Environmental Studies. For additional information, refer to the Specialization in Environmental Studies statement in the College of Natural Science section of this catalog.

APPLIED ENGINEERING SCIENCES

It is the intent of the Applied Engineering Sciences major to provide educational opportunities for the undergraduate student who wishes to gain a broad foundation in the engineering sciences, core engineering disciplines, and their applications. The program is designed to develop an individual who is: (1) knowledgeable of the impact of technology on society, (2) capable of recognizing how analytical tools are used in the solution of problems, (3) aware of the theoretical constraints under which new developments must function, (4) able to aid in the application of these techniques to a wide range of problems, and (5) competent in a specific area of application.

This program is designed to develop a uniquely qualified individual capable of functioning in a variety of employment contexts using technical competencies combined with applied knowledge from a cognate area. A few of the cross–disciplinary employment areas include: technical sales, technical journalism, communications, telecommunications, industrial management, operations management, procurement, sourcing, and logistics management, public administration, urban applications, environmental issues, political analysis, and law.

Requirements for the Bachelor of Science Degree in Applied Engineering Sciences

1. The University requirements for bachelor's degrees as described in the Undergraduate Education section of this catalog; 120 credits, including general elective credits, are required for the Bachelor of Science degree in Applied Engineering Sciences. The University's Tier II writing requirement for the Applied Engineering Sciences major is met by completing Electrical and Computer Engineering 345 and Engineering 410. Those courses are referenced in item 3. a. below.

Students who are enrolled in the College of Engineering may complete the alternative track to Integrative Studies in Biological and Physical Sciences that is described in item 1. under the heading Graduation Requirements for All Majors in the College statement. Certain courses referenced in requirement 3. below may be used to satisfy the alternative track.

2. The requirements of the College of Engineering for the Bachelor of Science degree.

The credits earned in certain courses referenced in requirement 3. below may be counted toward College requirements as appropriate.

3. The following requirements for the major:

ENGINEERING Graduate Study

TEACHER CERTIFICATION OPTION

A computer science disciplinary minor in the College of Engineering is available for teacher certification.

Students who elect the computer science disciplinary minor must contact the Department of Computer Science and Engineering.

For additional information, refer to the statement on TEACHER CERTIFICATION in the Department of Teacher Education section of this catalog.

GRADUATE STUDY

The College of Engineering offers programs leading to the Master of Science and Doctor of Philosophy degrees in the following fields:

- chemical engineering
- civil engineering
- computer science
- electrical engineering
- engineering mechanics
- environmental engineering
- materials science and engineering
- mechanical engineering

Programs leading to the Master of Science and Doctor of Philosophy degrees in biosystems engineering are offered through the College of Agriculture and Natural Resources.

All programs are designed to provide a fundamental approach to basic engineering principles with emphasis on scientific methods, and to lead to careers in engineering research and development or teaching. Advanced work in the major field of specialization is combined with supporting courses in one or more other fields to develop individuals capable of creative work in engineering science and areas of application.

Students who are enrolled in Master of Science degree programs in the Department of Biosystems and Agricultural Engi-

nering may elect a Specialization in Food Safety. For additional information, refer to the statement on the specialization in the College of Veterinary Medicine section of this catalog.

Master of Science

In addition to meeting the requirements of the University as described in the Graduate Education section of this catalog, students must meet the requirements specified below.

Admission

Regular Status. Admission to a master's degree program with regular status may be granted by the department, subject to the availability of resources and to the approval of the dean, upon consideration of the likelihood that the applicant will be able to pursue a master's program successfully without taking collateral courses. As evidence of eligibility for admission, the student may offer any of the following:

a. The possession of a bachelor's degree in an accredited program in engineering with a grade–point average not lower than 3.00 for the final two years of the undergraduate program, or with standing in the upper quarter of the graduating class in the student's major.

b. The possession of a bachelor's degree in engineering or a related field where the applicant has shown very high academic achievement, as certified by the department.

c. Evidence of ability and resolution to complete a master's program, as attested by the department upon review of the applicant's academic record, test scores, experience, reference statements, professional qualifications, proposed studies, and other relevant information.

Provisional Status. Admission to a master's degree program with provisional status may be granted by the department, subject to the approval of the dean:

a. To an applicant qualified for regular admission except that collateral courses are deemed necessary, or

b. To an applicant whose record is incomplete.

If collateral courses are required, the minimum acceptable grades and the semesters by which those courses must be completed will be specified on the admission form. The provisional status will be changed to regular status when the conditions specified on the admission form have been met, as certified by the department and approved by the dean.

Program Filing

The student's program of study must be approved before the student completes 6 credits of graduate work in order for the student to continue to enroll in the master's degree program.

For any independent study or selected topics course that is included in the student's approved program of study, the subject material and the instructor must be specified.

Modification of Program

With reference to the student's approved program of study, none of the following types of changes will be approved:

1. Adding or deleting a course for which a grade has already been assigned under any of the three grading systems (numerical, Pass–No Grade, or Credit–No Credit).

2. Adding or deleting a course for which grading was postponed by the use of the DF–Deferred marker.

3. Adding or deleting a course which the student dropped after the middle of the semester and for which “W” or “N” or “0.0” was designated.

309
Requirements for the Master of Science Degree

The student must:
1. Complete a minimum of 30 credits in 400–, 800–, and 900–level courses under either Plan A (with thesis) or Plan B (without thesis). Courses below the 400 level may not be counted toward the requirements for the degree.
   a. **Requirements for Plan A**: The student must:
      (1) Complete a minimum of 20 credits in courses at the 800–900 level.
      (2) Complete at least 4, but not more than 8, credits in Master’s Thesis Research (course number 899 in the department of the student’s major).
      (3) Provide to the major professor and to the department a hard–bound copy of the thesis made from the original unbound manuscript submitted to the Office of The Graduate School. Arrangements for delivery of the copies shall be made when the original manuscript is submitted to the Office of The Graduate School.
   b. **Requirements for Plan B**: The student must:
      (1) Complete a minimum of 18 credits in courses at the 800–900 level.
2. Pass the final certifying examination administered by the student’s department. It is the student’s responsibility to obtain detailed information about this examination from the department.

Academic Standards

1. **Grades**: The student must earn a grade of 2.0 or higher in each course in the approved program of study. The student must complete any course that the grade earned was below 2.0.
2. **Cumulative Grade–Point Average**: The student must maintain a cumulative grade–point average of at least 3.00 in the courses in the approved program of study.
3. **Probational Status**: A student is placed on probational status if the student’s cumulative grade–point average for the courses in the approved program of study is below 3.00. A student in probationary status is not allowed to carry more than 7 credits per semester or to enroll in any course the primary focus of which is independent study.
4. **Retention In and Dismissal From the Program**
   a. **Cumulative Grade–Point Average**: Should a student’s cumulative grade–point average fall below 3.00 after having completed 16 or more credits in courses in the approved program of study, the student may be enrolled in probationary status in the master’s degree program for one additional semester. If at the end of the additional semester the student’s cumulative grade–point average is 3.00 or higher, the student may continue to enroll in the master’s degree program. If at the end of the additional semester the student’s cumulative grade–point average is still below 3.00, the student will be dismissed from the program.
   b. **Academic Progress and Professional Potential**: Each student’s academic progress and professional potential are evaluated by March 15 of each year. A student who in the judgment of the faculty is making satisfactory academic progress and has professional potential may continue to enroll in the master’s degree program. A student who in the judgment of the faculty is not making satisfactory academic progress or lacks professional potential will be dismissed from the program.

Transfer Credits

As a member of the Michigan Coalition for Engineering Education (MCEE), MSU will accept up to one less than half of the course credits required for the Master of Science degree program in the College of Engineering in transfer from other MCEE member institutions provided that (1) the student earned a grade of at least 3.0, or the equivalent, in the related courses; (2) the credits were not earned in research or thesis courses; and (3) the total number of credits accepted in transfer from MCEE member institutions and from other institutions does not exceed one less than half of the credits required.

Doctor of Philosophy

In addition to meeting the requirements of the University as described in the Graduate Education section of this catalog, students must meet the requirements specified below.

Admission

**Regular Status**: Admission to a doctoral degree program with regular status may be granted by the department, subject to the availability of resources and to the approval of the dean, upon consideration of the likelihood that the applicant will be able to pursue a doctoral program successfully without taking collateral courses. As evidence of eligibility for admission, the student may offer any of the following:
   a. The possession of a master’s degree in engineering or a related field.
   b. The completion of the equivalent of a master’s degree program in the major field.
   c. Evidence of ability and resolution to complete a doctoral program, as attested by the department upon review of the applicant’s academic record, test scores, experience, reference statements, professional qualifications, proposed studies, and other relevant information.

Admission to the doctoral program without a master’s degree, or the equivalent thereof, will require special consideration by the department and the dean.

**Provisional Status**: Admission to a doctoral degree program with provisional status may be granted by the department, subject to the approval of the dean:
   a. To an applicant qualified for regular admission except that collateral courses are deemed necessary, or
   b. To an applicant whose record is incomplete.

If collateral courses are required, the minimum acceptable grades and the semesters by which those courses must be completed will be specified on the admission form. The provisional status will be changed to regular status when the conditions specified on the admission form have been met, as determined by the department and approved by the dean.

Guidance Committee

The student’s guidance committee is appointed by the department chairperson in consultation with the student and the appropriate faculty members, and with the approval of the dean. At least two members of the guidance committee shall be from the major department and at least one member shall be from a department outside of the major department. The chairperson of the guidance committee will be appointed by the department chair-
person after consultation with the student and the person recommended to chair the committee.

**Guidance Committee Report**

The student's program of study shall be submitted for approval to the department and to the Dean by no later than the end of the student's second semester of enrollment in the doctoral program. For any independent study or selected topics course that is included in the student's program of study, the subject material and the instructor must be specified.

The student's program of study must be approved in order for the student to continue to enroll in the doctoral degree program beyond the second semester.

**Modification of Program**

With reference to the student's approved guidance committee report, none of the following types of changes will be approved:

1. Adding or deleting a course for which a grade has already been assigned under any of the three grading systems (numerical, Pass–No Grade, or Credit–No Credit).
2. Adding or deleting a course for which grading was postponed by the use of the DF–Deferred marker.
3. Adding or deleting a course which the student dropped after the middle of the semester and for which "W" or "N" or "0.0" was designated.
4. Adding or deleting a course during the final semester of enrollment in the doctoral degree program.

**Requirements for the Doctor of Philosophy Degree**

The student must:

1. Pass the qualifying examination administered by the student's department. It is the student's responsibility to obtain detailed information about this examination from the department.
2. Pass the doctoral comprehensive examination at least six months prior to the final oral examination in defense of the dissertation. The examination may be retaken no more than twice. It is the student's responsibility to obtain detailed information about this examination from the department.
3. Provide to the major professor and to the department a hard-bound copy of the dissertation made from the original unbound manuscript submitted to the Office of the Graduate School. Arrangements for delivery of the copies shall be made when the original manuscript is submitted to the Office of The Graduate School.

**Academic Standards**

1. **Grades.** The student must earn a grade of 2.0 or higher in each course in the approved guidance committee report, including collateral courses and courses accepted in transfer. The student must repeat any course for which the grade earned was below 2.0.
2. **Cumulative Grade–Point Average.** The student must maintain a cumulative grade–point average of at least 3.00 in courses in the approved guidance committee report, with the exception of collateral courses and courses accepted in transfer.
3. **Deferred Grades.** A student may accumulate no more than 3 deferred grades (identified by the DF–Deferred marker) in courses other than those courses the primary focus of which is independent study.
4. **Probational Status.** A student is placed on probational status if either or both of the following conditions apply:
   a. The student's cumulative grade–point average for the courses in the approved guidance committee report is below 3.00.
   b. The student has accumulated more than three deferred grades (identified by the DF–Deferred marker) in courses other than those courses the primary focus of which is independent study.

A student in probational status is not allowed to carry more than 7 credits per semester or to enroll in any course the primary focus of which is independent study.

5. **Retention In and Dismissal From the Program.**
   a. **Cumulative Grade–point Average.** Should a student's cumulative grade–point average fall below 3.00 after having completed half of the courses in the approved guidance committee report, the student may be enrolled in probational status in the doctoral degree program for one additional semester. If at the end of the additional semester the student's cumulative grade–point average is 3.00 or higher, the student may continue to enroll in the doctoral degree program. If at the end of the additional semester the student's cumulative grade–point average is still below 3.00, the student will be dismissed from the program.
   b. **Deferred Grades.** Should a student accumulate more than 3 deferred grades (identified by the DF–Deferred marker) in courses other than those courses the primary focus of which is independent study, the student may be enrolled on probational status in the doctoral degree program for one additional semester. If at the end of the additional semester the student has no more than 3 deferred grades, the student may continue to enroll in the doctoral degree program. If at the end of the additional semester the student still has more than 3 deferred grades, the student will be dismissed from the program.
   c. **Academic Progress and Professional Potential.** Each student's academic progress and professional potential are evaluated by March 15 of each year. A student who in the judgment of the faculty is making satisfactory academic progress and has professional potential may continue to enroll in the doctoral degree program. A student who in the judgment of the faculty is not making satisfactory academic progress or lacks professional potential will be dismissed from the program.

**GRADUATE SPECIALIZATION IN ENVIRONMENTAL TOXICOLOGY**

The College of Engineering, the College of Agriculture and Natural Resources, the College of Natural Science, and the College of Veterinary Medicine administer the Graduate Specialization in Environmental Toxicology. The College of Agriculture and Natural Resources is the primary administrative unit. For additional information, refer to the Graduate Specialization in Environmental Toxicology statement in the College of Agriculture and Natural Resources section of this catalog.
DEPARTMENT of
BIOSYSTEMS and
AGRICULTURAL
ENGINEERING

Ajit Srivastava, Chairperson

The Department of Biosystems and Agricultural Engineering is administered jointly by the College of Engineering and the College of Agriculture and Natural Resources.

UNDERGRADUATE PROGRAM

The department offers a Bachelor of Science degree program with a major in biosystems engineering through the College of Engineering. That program is described below.

The department also offers a Bachelor of Science degree program with a major in technology systems management through the College of Agriculture and Natural Resources. For information about that program, refer to the statement on the Department of Biosystems and Agricultural Engineering in the College of Agriculture and Natural Resources section of this catalog.

Students who are enrolled in the Bachelor of Science degree program with a major in biosystems engineering may elect a Specialization in Agricultural and Natural Resources. For additional information, refer to the statement on the College of Agriculture and Natural Resources section of this catalog.

BIOSYSTEMS ENGINEERING

Bachelor of Science

Biosystems engineers design solutions to technical problems that involve a critical biological component. They apply quantitative skills in areas such as fluid mechanics, thermodynamics, heat transfer, mass transfer, and systems analysis to create products, processes, and systems that improve human existence. Working at the interface of engineering and biology, biosystems engineers are engaged in the most important challenges of our time.

There are a wide variety of job functions and application areas for our graduates, including protecting our environmental resources and ensuring the safety and quality of our food supply. Biosystems engineers may, for example, design sterilization and pasteurization processes to eliminate microbial pathogens and maximize the nutritional value of our food. Other graduates may design constructed wetlands, which utilize biological systems to capture pollutants and protect our precious fresh water resources. Biosystems engineers are sought after by a wide variety of employers including food manufacturers, environmental consulting firms, and government agencies who need creative individuals to integrate principles of engineering and biology successfully.

The Bachelor of Science Degree program in Biosystems Engineering is accredited by the Engineering Accreditation Commission of ABET, 111 Market Place, Suite 1050, Baltimore, MD 21202-4012; telephone (410) 347-7700.

Requirements for the Bachelor of Science Degree in Biosystems Engineering

1. The University requirements for bachelor’s degrees as described in the Undergraduate Education section of this catalog; 128 credits, including general elective credits, are required for the Bachelor of Science degree in Biosystems Engineering.

   The University’s Tier II writing requirement for the Biosystems Engineering major is met by completing Biosystems Engineering 487. That course is referenced in item 3. a. below.

   Students who are enrolled in the College of Engineering may complete the alternative track to Integrative Studies in Biological and Physical Sciences that is described in item 1. under the heading Graduation Requirements for All Majors in the College statement. Certain courses referenced in requirement 3. below may be used to satisfy the alternative track.

2. The requirements of the College of Engineering for the Bachelor of Science degree.

   The credits earned in certain courses referenced in requirement 3. below may be counted toward College requirements as appropriate.

3. The following requirements for the major:

   a. All of the following courses: ........................................ 46
      BE 130 Engineering Design Fundamentals for Biological Systems .................................... 2
      BE 230 Engineering Analysis of Biological Systems .......................................................... 3
      BE 332 Engineering Properties of Biological Materials ....................................................... 3
      BE 333 Biosystems Engineering Laboratory ....................................................................... 1
      BE 350 Heat and Mass Transfer in Biosystems .................................................................. 3
      BE 351 Environmental Thermodynamics .......................................................................... 3
      BE 352 Biosystems Design Project (W) ............................................................................ 1
      BE 370 Organisms and Populations ................................................................................... 4
      CE 321 Introduction to Fluid Mechanics .............................................................................. 3
      CEM 143 Survey of Organic Chemistry ............................................................................ 4
      CEM 161 Chemistry Laboratory I ...................................................................................... 1
      ECE 345 Electronic Instrumentation and Systems ................................................................. 3
      ME 221 Statics ..................................................................................................................... 3
      STT 351 Probability and Statistics for Engineering ............................................................... 3

   b. One of the following courses: ....................................................................................... 6
      BS 111 Cells and Molecules .............................................................................................. 3
      MMG 201 Fundamentals of Microbiology ........................................................................... 3
      PLB 105 Plant Biology ....................................................................................................... 3

   c. Two of the following courses: ....................................................................................... 6
      BE 456 Electric Power and Control .................................................................................... 3
      BE 477 Food Engineering: Fluids .................................................................................... 3
      BE 478 Food Engineering: Solids .................................................................................... 3
      BE 481 Land and Water Conservation Engineering ............................................................ 3
      BE 482 Non-point Source Pollution Control ..................................................................... 3

   d. Engineering Electives: .................................................................................................... 12
      A cognate consists of carefully selected courses that support a career objective involving the application of engineering skills to challenges with critical biological components. The cognate allows for breadth of interest and depth of learning for a given student. The cognate must include at least one biological science course beyond the requirements in 3. a. and 3. b. above, at least one quantitative/technical course, and must include 300- and 400-level courses to achieve depth in a particular area. Engineering electives cannot simultaneously satisfy the cognate requirement. Courses that are used to satisfy the engineering electives requirement and the cognate requirement must be chosen to form a career objective and be approved by the student’s academic advisor.

GRADUATE STUDY

The department offers Master of Science and Doctor of Philosophy programs in biosystems engineering through the College of Agriculture and Natural Resources. For information about those programs, refer to the statement on the Department of Biosystems and Agricultural Engineering in the College of Agriculture and Natural Resources section of this catalog.

Students who are enrolled in Master of Science degree programs in the Department of Biosystems and Agricultural Engineering may elect a Specialization in Food Safety. For additional information, refer to the statement on the specialization in the College of Veterinary Medicine section of this catalog.
Department of Chemical Engineering and Materials Science

Martin Hawley, Chairperson

Undergraduate Programs

Chemical engineers convert raw materials to finished products via pathways involving chemical and physical changes. The principles of mass, energy, and momentum conservation, chemical reactions, thermodynamics, and economics are used to develop new products and to design and operate manufacturing facilities to produce products that benefit society. Chemical engineering principles are, in turn, based on the sciences of chemistry, biology, mathematics, and physics, which form the underlying foundation of the discipline.

The work of the chemical engineer may be in the production of industrial chemicals, plastics, petroleum products, pharmaceuticals, textiles, food, electronics, sensors, consumer goods, medical products and devices, specialty materials of construction, or other products. Within these product areas, chemical engineers are involved in research and development of products and processes, in the design and operation of manufacturing facilities, and in management and product quality control.

Students in this degree program will study the application of chemical engineering principles to biological systems, medical products, nanoscale devices, and high-strength materials. Principles of sustainability, environmentally-friendly "green" processing, and entrepreneurship and other emerging topics are also addressed in courses and options.

The Bachelor of Science Degree program in Chemical Engineering is accredited by the Engineering Accreditation Commission of ABET, 111 Market Place, Suite 1050, Baltimore, MD 21202-4012; telephone (410) 347-7700.

Requirements for the Bachelor of Science Degree in Chemical Engineering

1. The University requirements for bachelor's degrees as described in the Undergraduate Education section of this catalog; 128 credits, including general elective credits, are required for the Bachelor of Science degree in Chemical Engineering.

The University's Tier II writing requirement for the Chemical Engineering major is met by completing Chemical Engineering 316 and 433. Those courses are referenced in item 3.a. below.

Students who are enrolled in the College of Engineering may complete the alternative track to Integrative Studies in Biological and Physical Sciences that is described in item 1. under the heading Graduation Requirements for All Majors in the College statement. Certain courses referenced in requirement 3. below may be used to satisfy the alternative track.

2. The requirements of the College of Engineering for the Bachelor of Science degree.

The credits earned in certain courses referenced in requirement 3. below may be counted toward College requirements as appropriate.

3. The following requirements for the major:

   a. All of the following courses: ........................................... 65

      BMF 401 Basic Biochemistry ........................................... 4
      BS 111 Cells and Molecules ............................................. 3
      CEM 151 General and Descriptive Chemistry ...................... 4
      CEM 152 Principles of Chemistry .................................... 3
      CEM 161 Chemistry Laboratory I ..................................... 1
      CEM 162 Chemistry Laboratory II .................................... 1
      CEM 351 Organic Chemistry I ........................................ 3
      CEM 352 Organic Chemistry II ........................................ 3
      CEM 355 Organic Laboratory I ........................................ 2
      CEM 381 Molecular Pharmacology .................................... 3
      CHE 201 Material and Energy Balances ............................. 3
      CHE 210 Modeling and Analysis of Transport Phenomena .......... 3
      CHE 301 Chemical Engineering as a Profession .................. 1
      CHE 311 Fluid Flow and Heat Transfer ............................. 3
      CHE 312 Mass Transfer and Separations ............................ 4
      CHE 316 Laboratory Practice and Statistical Analysis .......... 4
      CHE 321 Thermodynamics for Chemical Engineering ............ 4
      CHE 431 Chemical Reaction Engineering .......................... 4
      CHE 432 Process Analysis and Control ............................. 3
      CHE 433 Process Design and Optimization I ....................... 4
      CHE 434 Process Design and Optimization II ...................... 2
      CHE 473 Chemical Engineering Principles in Polymers and Material Systems ................................. 3
      CHE 474 Composite Materials Processing .......................... 3
      CHE 481 Biochemical Engineering .................................... 3
      C. Technical Electives.

         Students must complete at least 6 credits of technically oriented subject-related courses approved by the student’s advisor. Acceptable subjects include, but are not limited to, processes processing or biochemical engineering (in addition to that required in item 3.b above), electronic materials, environment, advanced mathematics, transport phenomena, advanced chemistry, foods, legal and regulatory issues, advanced materials, advanced biology, statistics, biomedical engineering, and polymers.

   b. One of the following courses: .......................................... 3
      CHE 472 Composite Materials Processing .......................... 3
      CHE 481 Biochemical Engineering .................................... 3
      CHE 473 Chemical Engineering Principles in Polymers and Material Systems ........................................... 3

   c. Electives.

      NOTE: Elective courses in item 3.c. must include at least 3 credits of engineering topics, which includes courses taught in the College of Engineering as well as courses taught in advanced mathematics, advanced chemistry, advanced biology, advanced statistics, and advanced physics.

Options in Chemical Engineering

In response to increasing interest in the application of chemical engineering principles to related fields, the Department of Chemical Engineering and Materials Science offers options in biochemical engineering, environmental engineering, food science, and polymer science and engineering to students wishing an area of specialization in the degree. Options are available to, but not required of, any student enrolled in the Bachelor of Science degree program in chemical engineering.

NOTE: Completing the Bachelor of Science degree in chemical engineering with an option may require more than 128 credits. Completing an option below satisfies requirement 3. c. above.

Biochemical Engineering Option

To earn a Bachelor of Science degree in Chemical Engineering with a biochemical engineering option, students must complete requirements 1., 2., 3.a., and 3.e. above and the following:

   All of the following courses: ............................................. 13
      BMB 401 Basic Biochemistry ........................................... 4
      BS 111 Cells and Molecules ............................................ 3
      CHE 481 Biochemical Engineering .................................... 3
      MMG 301 Introductory Microbiology ................................ 3
      One of the following courses: ........................................ 3
         CHE 491 Selected Topics in Chemical Engineering .............. 3
         CHE 882 Advanced Biochemical Engineering .................... 3

Environmental Option

To earn a Bachelor of Science degree in Chemical Engineering with an environmental option, the student must complete requirements 1., 2., and 3.a. above and the following:

   All of the following courses: ............................................. 9
      CE 280 Introduction to Environmental Engineering .............. 3
      CHE 481 Biochemical Engineering .................................... 3
      MMG 205 Allied Health Microbiology ................................ 3
      Three of the following courses: .................................... 9
         CE 481 Environmental Engineering Chemistry ................... 3
         CE 483 Water and Wastewater Treatment .......................... 3
         CE 485 Solid and Hazardous Waste Management ............... 3
         CE 487 Microbiology for Environmental Health Engineering .... 3

Food Science Option

To earn a Bachelor of Science degree in Chemical Engineering with a food science option, students must complete requirements 1., 2., 3.a. and 3.b. above and all of the following:

   All of the following courses: .......................................... 15
      BE 477 Food Engineering: Fluids .................................... 3
      FSC 401 Food Chemistry ............................................... 3
      FSC 421 Food Laws and Regulations .................................. 3
      FSC 440 Food Microbiology .......................................... 3
      MMG 205 Allied Health Microbiology ................................ 3

Polymer Science and Engineering Option

To earn a Bachelor of Science degree in Chemical Engineering with a polymer science and engineering option, students must complete requirements 1., 2., 3.a., 3.c., and 3.e. above and all of the following:

   All of the following courses: .......................................... 9
      CHE 472 Composite Materials Processing .......................... 3
      CHE 473 Chemical Engineering Principles in Polymers ......... 3
      CHE 474 Composite Materials Processing .......................... 3
      ME 221 Statics ......................................................... 4
      ME 222 Mechanics of Deformable Solids ........................... 3
      One of the following courses: ...................................... 3 or 4

   CREDITS

   313
1. The University requirements for bachelor’s degrees as described in the Engineering Requirements for the Bachelor of Science Degree.

2. The requirements of the College of Engineering for the Bachelor of Science degree.

MATERIALS SCIENCE and ENGINEERING

Materials Science and Engineering is a multidisciplinary field that often functions at the interface between disciplines. Materials Science and Engineering majors learn to create and/or specify materials used to realize design concepts in engineering fields such as bioengineering, microelectronics and aerospace. They also learn how to coax the elements of matter into the atomic arrangements that insure efficient and cost-effective materials performance, demanded by today’s advanced applications.

In the Materials Science and Engineering core, students gain the scientific and engineering foundation needed to design metallic, ceramic, polymeric, and composite materials; they learn about the processes used to manufacture components from these materials.

Requirements for the Bachelor of Science Degree in Materials Science and Engineering

1. The University requirements for bachelor’s degrees as described in the Undergraduate Education section of this catalog; 128 credits, including general elective credits, are required for the Bachelor of Science degree in Materials Science and Engineering.

2. The requirements of the College of Engineering for the Bachelor of Science degree.

3. At least 9 credits from a list of approved technical electives.

4. The credits earned in certain courses referenced in requirement 3. below may be counted toward College requirements as appropriate.

Biomedical Materials Engineering Option

To gain interdisciplinary skills in human biology and earn a Bachelor of Science degree in Materials Science and Engineering with a biomedical materials engineering option, students must complete requirement 3. a. above and the following (12 credits):

- ME 423 Intermediate Mechanics of Deformable Solids
- MSE 426 Introduction to Composite Materials
- MSE 466 Fracture and Failure Analysis
- MSE 476 Physical Metallurgy of Ferrous and Aluminum Alloys

Completion of this option fulfills requirement 2. of the admission requirements for the Master of Science degree in Manufacturing and Engineering Management offered by The E. I. du Pont de Nemours and Company.

Manufacturing Engineering Option

To gain interdisciplinary skills with business and design engineers for manufacturing projects and earn a Bachelor of Science degree in Materials Science and Engineering with a manufacturing engineering option, students must complete requirement 3. a. above and the following (18 credits):

- MSE 426 Introduction to Composite Materials
- MSE 466 Fracture and Failure Analysis
- MSE 476 Physical Metallurgy of Ferrous and Aluminum Alloys

Completion of this option fulfills requirement 2. of the admission requirements for the Master of Science degree in Manufacturing and Engineering Management offered by The E. I. du Pont de Nemours and Company.

Metallurgical Engineering Option

To enhance the student’s ability to characterize, process, and design with metals in association with mechanical engineers and earn a Bachelor of Science degree in Materials Science and Engineering with a metallurgical engineering option, students must complete requirement 3. a. above and the following (18 credits):

- MSE 466 Fracture and Failure Analysis
- MSE 476 Physical Metallurgy of Ferrous and Aluminum Alloys
- STT 471 Statistics for Quality and Productivity

Completion of this option fulfills requirement 2. of the admission requirements for the Master of Science degree in Manufacturing and Engineering Management offered by The E. I. du Pont de Nemours and Company.
GRADUATE STUDY

The Department of Chemical Engineering and Materials Science offers Master of Science and Doctor of Philosophy degree programs in chemical engineering.

The Department of Materials Science and Mechanics offers programs leading to the Master of Science and Doctor of Philosophy degrees. From a wide range of course offerings and research activities, an individual program can be designed to fit the background, capabilities, and aims of the student. Studies in the department may be supplemented with courses offered by other departments in the College of Engineering and in other colleges. For all fields, special emphasis is placed on the mastery of basic principles and methods. Courses and research opportunities are available in the following areas:

- **MATERIALS SCIENCE AND ENGINEERING**: biomaterials, ceramic materials, composite materials, electron microscopy, high-temperature superconductors, impact damage, intermetallic alloys, laser processing of metals, mechanical and physical metallurgy, phase transformation, polymer materials, processing of ceramics, polymers and their composites, shape memory alloys, surface modification of metals and polymers, structural thin film, and superplasticity of metals.

- **ENGINEERING MECHANICS**: applied mathematics, biomechanics, buckling, computational mechanics, continuum mechanics, dynamics, experimental mechanics, fracture mechanics, linear and nonlinear elasticity, mechanics of fatigue, mechanics of composite materials, micromechanics, optical methods of measurement, plasticity, stochastic methods in mechanics, thermoelectricity, vibration, and wave propagation.

**CHEMICAL ENGINEERING**

Emphasis in the graduate programs in chemical engineering is placed upon a fundamental approach to chemical engineering principles and the applications of chemistry and advanced mathematics. Selected topics in chemical engineering are developed from a fundamental viewpoint, with opportunities for study and research in such areas as process analysis, chemical engineering thermodynamics, chemical reaction engineering, composite materials, polymers, heat transfer, mass transfer, distillation, absorption, extraction, transport phenomena, diffusion, and biochemical engineering.

**Polymeric Engineering Option**

To gain interdisciplinary skills to facilitate interactions with chemical engineers and earn a Bachelor of Science degree in Materials Science and Engineering with a polymeric engineering option, students must complete requirement 3. above and the following (19 credits):

All of the following courses (19 credits):
- ME 425 Experimental Mechanics .................................. 3
- MSE 451 Microscopic and Diffraction Analysis of Materials ........ 3

Upon completion of the required courses for one of these options, the student should contact the Department of Chemical Engineering and Materials Science and request certification for the completion of the option. After the certification is approved by the chairperson of the department and the Dean of the College of Engineering, the Office of the Registrar will enter on the student's academic record the name of the option and the date that it was completed. This certification will appear on the student's transcript.

**Master of Science**

In addition to meeting the requirements of the University and of the College of Engineering, students must meet the requirements specified below.

**Admission**

An applicant for admission to the master's degree program in chemical engineering must hold a bachelor's degree in chemical engineering or a related field and must have a grade-point average that would indicate success in graduate study.

International applicants must submit their scores on the Graduate Record Examination General Test.

Students who are admitted to the program with a bachelor's degree in a field related to chemical engineering will be required to complete the following collateral courses, in addition to the courses that are required for the master's degree:

<table>
<thead>
<tr>
<th>Course</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>CHE 432 Process Systems Control</td>
<td>3</td>
</tr>
<tr>
<td>CHE 433 Process Design and Optimization I</td>
<td>3</td>
</tr>
<tr>
<td>CHE 804 Thermodynamics and Kinetics in Chemical Engineering</td>
<td>3</td>
</tr>
<tr>
<td>CHE 805 Transport and Separation Processes</td>
<td>3</td>
</tr>
</tbody>
</table>

Equivalent undergraduate-level chemical engineering courses may be substituted for Chemical Engineering 804 and 805.

**Requirements for the Master of Science Degree in Chemical Engineering**

The students must complete a total of 30 credits for the degree under Plan A (with thesis) or a total of 36 credits for the degree under Plan B (without thesis), and meet the requirements specified below:

**Requirements for Both Plan A and Plan B**:

<table>
<thead>
<tr>
<th>Course</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Core Courses. All of the following courses:</td>
<td>15</td>
</tr>
<tr>
<td>CHE 801 Advanced Chemical Engineering Calculations</td>
<td>3</td>
</tr>
<tr>
<td>CHE 821 Advanced Chemical Engineering Thermodynamics</td>
<td>3</td>
</tr>
<tr>
<td>CHE 822 Transport Phenomena</td>
<td>3</td>
</tr>
<tr>
<td>CHE 831 Advanced Chemical Reaction Engineering</td>
<td>3</td>
</tr>
<tr>
<td>CHE 892 Seminar</td>
<td>3</td>
</tr>
</tbody>
</table>

2. Supporting Courses. Six credits in courses outside the Department of Chemical Engineering and Materials Science approved by the student's academic adviser. This requirement is waived for those students who are admitted to the master's degree program with a bachelor's degree in a discipline related to chemical engineering.

**Additional Requirements for Plan B**

Six to 9 credits in a coordinated technical minor.

**Doctor of Philosophy**

In addition to meeting the requirements of the University and of the College of Engineering, students must meet the requirements specified below.

**Admission**

An applicant for admission to the Ph.D. degree program in chemical engineering must hold a bachelor's or master's degree in chemical engineering or a related field and must have a grade-point average that would indicate success in graduate study.

International applicants must submit their scores on the Graduate Record Examination General Test.
Requirements for the Doctor of Philosophy Degree in Chemical Engineering

The guidance committee report must be proposed by the student and approved by the student's major professor, the student's guidance committee, the chairperson of the Department of Chemical Engineering and Materials Science, and the Dean of the College of Engineering.

In addition to meeting the requirements of the University and of the College of Engineering, students must meet the requirements specified by their guidance committees.

MATERIALS SCIENCE AND ENGINEERING

Master of Science

In addition to meeting the requirements of the University and of the College of Engineering, students must meet the requirements specified below.

Admission

The department welcomes applications from students who possess a bachelor's degree in a related engineering or science discipline.

Students who are admitted to the master's program with a degree in a discipline other than materials science and engineering and who have not completed Materials Science and Engineering 351, 355, 365, and 451 or equivalent courses may be admitted with provisional status. Such students will be required to demonstrate proficiency in the material in the courses referenced above, either by completing each of those courses with a grade of at least 3.0 or by passing an examination on the material in those courses sanctioned by the Department Graduate Studies Committee. Of the courses referenced above, only Materials Science and Engineering 451 may be counted toward the requirements for the master's degree.

Requirements for the Master of Science Degree in Materials Science and Engineering

The student must complete a total of 30 credits for the degree under either Plan A (with thesis) or Plan B (without thesis) and meet the requirements specified below:

Requirements for Both Plan A and Plan B:
The student must complete:
1. The following core courses in materials science and engineering: Materials Science and Engineering 851, 855, and 862 or 865.
2. At least one of the following core courses in engineering mechanics: Mechanical Engineering 825, 861, 820, or 821.
3. At least one of Materials Science and Engineering 885.
4. At least one course in mathematics or statistics at the 400-level or above approved by the student's academic adviser.

Doctor of Philosophy

In addition to meeting the requirements of the University and of the College of Engineering, students must meet the requirements specified below.

Admission

An applicant for admission must identify at least one prospective faculty adviser that he or she would like to direct his or her pro-

gram of study. Admission to the Ph.D. program is contingent on a faculty adviser accepting the student as an advisee.

Requirements for the Doctor of Philosophy Degree in Materials Science and Engineering

The student must complete:
1. At least one of the following core courses in engineering mechanics: Mechanical Engineering 825, 861, 820, or 821.
2. At least one course in mathematics or statistics at the 400-level or above.

These requirements are waived for those students who completed equivalent courses prior to enrolling in the doctoral program.

DEPARTMENT of CIVIL and ENVIRONMENTAL ENGINEERING

Ronald S. Harichandran, Chairperson

UNDERGRADUATE PROGRAM

The civil engineering major is designed to provide graduates with a broad understanding of the physical factors involved in the planning, design, and operation of public and private facilities.

The bachelor's degree program in civil engineering is oriented to the application of engineering principles to several areas of specialization, including transportation, structures, geotechnical engineering, environmental engineering, water resources, and pavements and materials. An Environmental Engineering Option is available as an elective to students in the program.

The Bachelor of Science Degree program in Civil Engineering is accredited by the Engineering Accreditation Commission of ABET, 111 Market Place, Suite 1050, Baltimore, MD 21202-4012; telephone (410) 347-7700.

Requirements for the Bachelor of Science Degree in Civil Engineering

1. The University requirements for bachelor's degrees as described in the Undergraduate Education section of this catalog; 128 credits, including general elective credits, are required for the Bachelor of Science degree in Civil Engineering.

The University's Tier II writing requirement for the Civil Engineering major is met by completing Civil Engineering 321 and 341. The University's Tier II writing requirement for students who elect the Environmental Engineering Option is met by completing Civil Engineering 321. Those courses are referenced in Item 3. a. below.

Students who are enrolled in the College of Engineering may complete the alternative track to Integrative Studies in Biological and Physical Sciences that is described in Item 1. under the heading Graduation Requirements for All Majors in the College statement. Certain courses referenced in requirement 3. below may be used to satisfy the alternative track.

2. The requirements of the College of Engineering for the Bachelor of Science degree.

The credits earned in certain courses referenced in requirement 3. below may be counted toward College requirements as appropriate.

3. The following requirements for the major:

a. All of the following courses: ........................................ 43
   CE 271 Engineering Surveying ...................................... 4
   CE 280 Principles of Environmental Engineering and Science ...................................................... 3
   CE 305 Introduction to Structural Analysis and Design ...................................................... 4
   CE 312 Soil Mechanics .......................................................... 4
   CE 321 Introduction to Fluid Mechanics ...................................................... 4
   CE 337 Civil Engineering Materials I ...................................................... 4
   CE 341 Transportation Engineering ...................................................... 3
   CE 495 Senior Design in Civil Engineering ...................................................... 3
   CEM 161 Chemistry Laboratory I ...................................................... 1
   ME 221 Statics .......................................................... 3

CREDITS
Environmental Engineering Option

The environmental engineering option is available to students who are enrolled in the Bachelor of Science degree program in civil engineering. Students who elect this option must complete the following courses:

<table>
<thead>
<tr>
<th>Courses</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>All of the following courses:</td>
<td>23</td>
</tr>
<tr>
<td>CE 480 Water and Wastewater Analysis Laboratory</td>
<td>3</td>

<td>4</td>
</tr>
<tr>
<td>CEM 152 Principles of Chemistry</td>
<td>3</td>
</tr>
<tr>
<td>CHE 201 Material and Energy Balances</td>
<td>3</td>
</tr>
</tbody>
</table>

Civil Engineering 483 and 485 may be used to satisfy both the requirements for the Bachelor of Science in Civil Engineering and the requirements for the Environmental Engineering Option.

Upon completion of the required courses, the student should contact the Department of Civil and Environmental Engineering and request certification for the completion of the Environmental Engineering Option. After the certification is approved by the chairperson of the department and the Dean of the College of Engineering, the Office of the Registrar will enter on the student's academic record the name of the option and the date that it was completed. This certification will appear on the student's transcript.

GRADUATE STUDY

The Department of Civil and Environmental Engineering offers the graduate degree programs that are listed below:

**Master of Science**
- Civil Engineering
- Environmental Engineering

**Doctor of Philosophy**
- Civil Engineering
- Environmental Engineering
- Environmental Engineering—Environmental Toxicology

Descriptions of the degree programs, organized by fields of study in alphabetical order, are presented below.

Students who are enrolled in Master of Science degree programs in the Department of Civil and Environmental Engineering may elect a Specialization in Environmental Toxicology. For additional information, refer to the *Graduate Specialization in Environmental Toxicology* statement in the College of Agriculture and Natural Resources section of this catalog.

CIVIL ENGINEERING

Students in the master's and doctoral degree programs in civil engineering may pursue advanced study in the areas of structures, fluid mechanics and hydraulics, geotechnical engineering, pavements, and transportation.

**Master of Science**

The student plans a program of study with the help of his or her academic adviser and subject to the approval of the adviser.

In addition to meeting the requirements of the University and of the College of Engineering, students must meet the requirements specified below.

**Admission**

An applicant for admission to the master's degree program in civil engineering should have a bachelor's degree in civil engineering or a related field and should have a grade–point average that would indicate success in graduate study. Examples of fields that are related to civil engineering are other engineering professional fields, physics, computer science, urban planning, and chemistry.

Depending on their undergraduate programs and their specializations within civil engineering, students who are admitted to the master's degree program with bachelor's degrees in fields related to civil engineering may be required to complete collateral courses.

All applicants are encouraged to submit their scores from the Graduate Record Examination General Test.
Requirements for the Master of Science Degree in Civil Engineering

The student must complete a total of 30 credits for the degree under either Plan A (with thesis) or Plan B (without thesis).

A student under Plan A must complete at least 4, but not more than 8, credits of Civil Engineering 899. Should the student complete more than 8 credits of Civil Engineering 899, no more than 8 credits may be counted toward the requirements for the degree.

A student under Plan B may choose to complete a research project or a design project as part of the 30 credits required for the degree. A student who elects either of these options must complete at least 1, but not more than 3, credits of Civil Engineering 892 or at least 3, but not more than 5, credits of Civil Engineering 893.

Doctor of Philosophy

Admission

All applicants are encouraged to submit their scores from the Graduate Record Examination General Test.

Requirements for the Doctor of Philosophy Degree in Civil Engineering

In addition to meeting the requirements of the University and of the College of Engineering, students must meet the requirements specified by their guidance committees.

ENVIRONMENTAL ENGINEERING

Students in the master's and doctoral degree programs in environmental engineering may pursue advanced study in the areas of biological and chemical treatment of hazardous substances in soils, leachates, industrial wastes, and groundwater; the fate and movement of chemical contaminants in surface water, groundwater, and soils; and environmental chemistry.

Master of Science

The student plans a program of study with the help of his or her academic adviser and subject to the approval of the adviser.

In addition to meeting the requirements of the University and of the College of Engineering, students must meet the requirements specified below.

Admission

Applicants for admission are expected to have a level of competency equivalent to that achieved by earning an undergraduate degree in environmental engineering, or in civil engineering with an environmental engineering specialization. The undergraduate program should have included courses in mathematics through differential equations, chemistry, physics (mechanics), fluid mechanics, computer programming, and the design of water and wastewater treatment processes.

Depending on their undergraduate programs and their specialties within environmental engineering, students who are admitted to the master's degree program with bachelor's degrees in fields related to environmental engineering may be required to complete collateral courses.

All applicants are encouraged to provide their scores from the Graduate Record Examination General Test.

Requirements for the Master of Science Degree in Environmental Engineering

The student must complete a total of 30 credits for the degree under either Plan A (with thesis) or Plan B (without thesis).

A student under Plan A must complete at least 4, but not more than 8, credits of Environmental Engineering 899. Should the student complete more than 8 credits of Environmental Engineering 899, no more than 8 credits may be counted toward the requirements for the degree.

A student under Plan B may choose to complete a research project or a design project as part of the 30 credits required for the degree. A student who elects either of these options must complete at least 1, but not more than 3, credits of Environmental Engineering 892 or at least 3, but not more than 5, credits of Environmental Engineering 893.

Doctor of Philosophy

Admission

All applicants are encouraged to submit their scores from the Graduate Record Examination General Test.

Requirements for the Doctor of Philosophy Degree in Environmental Engineering

In addition to meeting the requirements of the University and of the College of Engineering, students must meet the requirements specified by their guidance committees.

ENVIRONMENTAL TOXICOLOGY

Doctor of Philosophy

For information about the Doctor of Philosophy degree program in environmental engineering—environmental toxicology, refer to the statement on Multidepartmental Doctoral Programs in Environmental Toxicology in the Graduate Education section of this catalog.

DEPARTMENT of COMPUTER SCIENCE and ENGINEERING

Laura K. Dillon, Acting Chairperson

UNDERGRADUATE PROGRAM

Computer science encompasses the broad areas of information processing and problem solving using digital computers. Students learn to analyze, design, and build integrated software and hardware digital systems that process, transmit, and reason about information in order to solve problems. Computer science graduates are employed in essentially all areas of industry, government, and education. They serve as system analysts involved with problems in business and research, designers and planners
of process and production control software systems, computer component and system designers, programmers, and teachers.

The Bachelor of Science program provides both a theoretical foundation in computer science, required for continued success in this rapidly changing field, as well as practical experience with current tools and techniques. To achieve these goals, students take courses that span a spectrum of knowledge ranging from theoretical foundations, which enable rigorous analysis of computational problems and solutions, to applied design and engineering methods. At the upper level, students choose from a wide range of elective courses including those focusing on computer networks, computer architecture, artificial intelligence, database systems, and computer graphics. The senior year culminates with a team-oriented design course building on much of what one has learned throughout the undergraduate experience. Complementing these major areas, the cognate provides an excellent opportunity to develop an individually selected area of interest.

Students majoring in computer science with interests in other areas have the opportunity to consult and work with interested faculty from a wide range of academic disciplines.

Requirements for the Bachelor of Science Degree in Computer Science

1. The University requirements for bachelor's degrees as described in the Undergraduate Education section of this catalog; 120 credits, including general elective credits, are required for the Bachelor of Science degree in Computer Science.

The University's Tier II writing requirement for the Computer Science major is met by completing Computer Science and Engineering 498, referenced in item 3.b. below.

Students who are enrolled in the College of Engineering may complete the alternative track to Integrative Studies in Biological and Physical Sciences that is described in item 1, under the heading Graduation Requirements for All Majors in the College catalog.

2. The requirements of the College of Engineering for the Bachelor of Science degree.

The credits earned in certain courses referenced in requirement 3.b. below may be counted toward College requirements as appropriate.

3. The following requirements for the major:

   a. Bioskience - Courses may not be used to satisfy both (1) and (2) below.  
   (1) One of the following courses: 
      BS 110 Organisms and Populations .............. 4  
      BS 111L Cell and Molecular Biology ............ 3  
      ENT 205 Pests, Society and Environment .......... 3  
      MMG 205 Allied Health Microbiology .......... 3  
      PLB 105 Plant Biology ........................... 3  
      PSL 250 Introductory Physiology ............... 4  
      ZOL 141 Introductory Human Genetics .......... 3  
   (2) Biological Science 110 satisfies both requirement 3.a.(1) and 3.a.(2).

   b. All of the following courses: ........................... 27  
      CSE 232 Introduction to Programming II .......... 4  
      CSE 250 Discrete Structures in Computer Science .... 3  
      CSE 320 Computer Organization and Architecture .... 3  
      CSE 331 Algorithms and Data Structures .......... 3  
      CSE 332 Object-Oriented Software Design ........ 3  
      CSE 410 Operating Systems .......................... 3  
      CSE 488 Collaborative Design (W) ................. 4  
      STT 351 Probability and Statistics for Engineering .... 3  
      CSE 498 Collaborative Design (W) ................. 4  
   c. An additional five courses selected from the following:  ........... 15  
      CSE 420 Computer Architecture .................. 3  
      CSE 422 Computer Networks .................... 3  
      CSE 435 Software Engineering .................... 3  
      CSE 440 Introduction to Artificial Intelligence .... 3  
      CSE 450 Translation of Programming Languages .... 3  
      CSE 452 Organization of Programming Languages .... 3  
      CSE 460 Computability and Formal Language Theory .... 3  
      CSE 471 Media Processing and Multimedia Computing .... 3  
      CSE 472 Computer Graphics ...................... 3  
      CSE 480 Database Systems .......................... 3  
      MTH 416 Introduction to Algebraic Coding ......... 3  
      MTH 451 Numerical Analysis I .................... 3  
      MTH 481 Discrete Mathematics I .................. 3  
   d. Required Cognate: .................................... 15  
   (1) A minimum of four courses totaling 15 or more credits outside the College of Engineering selected from three options below.  
      (1) At least 6 of the 15 credits must be in courses at the 300-400 level.  
      (2) A sequence of at least four courses in a foreign language.  
      (3) Business Cognate: 
      All of the following courses:  
      ACC 230 Survey of Accounting Concepts .......... 3  
      EC 210 Economics Principles Using Calculus ....... 3  
      FI 320 Introduction to Finance .................... 3  
      GBL 323 Introduction to Business Law .......... 3  
      MSC 327 Introduction to Marketing ............. 3  
      Both the cognate and the related courses must be approved by the academic adviser of the Department of Computer Science and Engineering. The cognate should enhance the student’s ability to apply analytic procedures in a specific subject area. Cognates in the following areas are available to students in Computer Science: business, communication arts, foreign language, mathematics, the natural sciences, philosophy, psychology, the social sciences, and telecommunication. Students may complete cognates in other areas with the approval of the Department of Computer Science and Engineering academic adviser.

TEACHER CERTIFICATION OPTION

A computer science disciplinary minor is available for teacher certification.

Students who elect the computer science disciplinary minor must contact the Department of Computer Science and Engineering.

For additional information, refer to the statement on TEACHER CERTIFICATION in the Department of Teacher Education section of this catalog.

GRADUATE STUDY

The Department of Computer Science and Engineering offers programs leading to the Master of Science and Doctor of Philosophy degrees. Advanced study is available in the areas of computer architecture, design automation, distributed systems, computer networks, artificial intelligence, knowledge-based systems, database systems, parallel systems and algorithms, pattern recognition, image processing, computer vision, software engineering, and theory of computing. Interdisciplinary work with other departments is encouraged.

The Department operates a number of different laboratories with a variety of modern computing equipment. The Artificial Intelligence and Knowledge Based Systems Laboratory is supported by Sun and Macintosh workstations. The Pattern Recognition and Image Processing Laboratory provides multiple systems for digitizing and processing both intensity and range images and provides a workstation environment for users. The Advanced Computing Systems Laboratory supports a 640 node nCUBE parallel processor, a 96–node IBM Butterfly GP–1000 parallel processor, and access to an array of other parallel machines at the Advanced Computer Research Facility of Argonne National Laboratory.

The instructional laboratories include a digital system simulation laboratory for the design and modeling of digital circuits, as well as several open laboratories equipped with networked workstations and terminals. All computer science graduate students have a permanent email address. Via computer networks, students can keep in contact with colleagues, research groups, data bases, and agencies throughout the world. Other college and university resources include the Case Center for Computer–Aided Design and Manufacturing, the Electronics Research and Development Laboratory for VLSI design, an IBM 3090/180E vector processor, and a quad processor Convex C–240 system.

Students who are enrolled in master’s or doctoral degree programs in the Department of Computer Science and Engineering may elect an Interdepartmental Specialization in Cognitive Science. For additional information, refer to the statement on In-
Department of Computer Science and Engineering

terdepartmental Graduate Specializations in Cognitive Science in the College of Social Science section of this catalog. For additional information, contact the Department of Computer Science and Engineering.

Master of Science

In addition to meeting the requirements of the University and of the College of Engineering, students must meet the requirements specified below.

Admission

Applicants for admission should possess a bachelor's degree in computer science or a related field such as mathematics, physics, or electrical engineering. All applicants must submit their scores from the Graduate Record Examination (GRE) General Test. They must also submit their scores from the GRE Subject Test in Computer Science or a closely related field.

Requirements for the Master of Science Degree in Computer Science

The student must complete a total of 30 credits for the degree under either Plan A (with thesis) or Plan B (without thesis) and meet the requirements specified below:

Requirements for Both Plan A and Plan B:
The student must complete:
1. At least one semester of a graduate seminar.

Additional Requirements for Plan A:
The student must complete:
1. At least one course from each of the following groups of courses:
   a. Computer Science and Engineering 802, 803, 841. Computer Science and Engineering 845 and 846 combined may be substituted for one of those courses.
   b. Computer Science and Engineering 807, 808, 814, 880.
   d. Computer Science and Engineering 830, 835, 860, 862.
2. At least 6, but not more than 8, credits of CSE 899 Master's Thesis Research.

Additional Requirements for Plan B:
The student must complete one of the following two options:
1. A minimum of 30 credits in courses approved by the student's academic adviser.
2. Complete the following:
   a. At least one course from each of the following groups of courses:
      (1) Computer Science and Engineering 802, 803, 841. Computer Science and Engineering 845 and 846 combined may be substituted for one of those courses.
      (2) Computer Science and Engineering 807, 808, 814, 880.
      (3) Computer Science and Engineering 812, 820, 822, 838.
      (4) Computer Science and Engineering 830, 835, 860, 862.
   b. A supervised project while enrolled in 4 credits of Computer Science and Engineering 898.

Doctor of Philosophy

In addition to meeting the requirements of the University and of the College of Engineering, students must meet the requirements specified below.

Admission

Applicants should be in the top 25 percent of their master's degree classes and should have a grade–point average of at least 3.50 on a scale of 4.0. For persons who are enrolled in MSU's master's degree program in computer science, their progress in the Ph.D. Qualifying Examination will also be considered.

Applicants must submit their scores on the Graduate Record Examination General Test and Subject Test in Computer Science. A score of 85 percent or higher on the Computer Science Subject Test is required for admission.

Applicants who have a Bachelor of Science degree and who demonstrate exceptional potential for graduate study may be accepted for admission to the doctoral program.

Requirements for the Doctor of Philosophy Degree in Computer Science

In addition to meeting the requirements of the University and of the College of Engineering, students must meet the requirements specified by their guidance committees. All courses that are used to satisfy the requirements for the degree must have been completed under the numerical grading system.

DEPARTMENT of ELECTRICAL and COMPUTER ENGINEERING

Satish S. Udpa, Chairperson

UNDERGRADUATE PROGRAMS

COMPUTER ENGINEERING

Computer engineering is concerned with the organization and design of computers and computer systems. The study of computer hardware and software, and their integration and application, is emphasized. The undergraduate program in computer engineering integrates studies in mathematics, basic sciences, engineering sciences, and engineering design. The program is structured to establish analytical and design skills in areas such as computer architecture, digital logic design, analog and mixed-signal circuits, computer communication networks, digital computer control, integrated circuit engineering, software engineering, operating systems, data structures and algorithms, computer–aided engineering, and electronic design automation. Complementing these fundamentals, the program also provides opportunities for specialization in individually selected areas of interest.

The Bachelor of Science Degree program in Computer Engineering is accredited by the Engineering Accreditation Commission of ABET, 111 Market Place, Suite 1050, Baltimore, MD 21202-4012; telephone (410) 347-7700.
## Requirements for the Bachelor of Science Degree in Computer Engineering

1. The University requirements for bachelor's degrees as described in the Undergraduate Education section of this catalog; 128 credits, including general elective credits, are required for the Bachelor of Science degree in Computer Engineering.

2. The Bachelor of Science Degree program in Electrical Engineering.

3. The credits earned in certain courses referenced in requirement 3. below may be counted toward College requirements as appropriate.

### ELECTRICAL ENGINEERING

The program provides both required and elective studies in communications, computers, control systems, electromagnetics, electronics, materials processing, power, signals, solid state, and biomedical engineering. It places emphasis on the fundamentals of science and mathematics and their application to the solution of contemporary problems that are within the purview of professional electrical engineers. The program is designed to establish a sound scientific basis for continuous growth in professional competence.

The Bachelor of Science Degree program in Electrical Engineering is accredited by the Engineering Accreditation Commission of ABET, 111 Market Place, Suite 1050, Baltimore, MD 21202-4012; telephone (410) 347-7700.

### GRADUATE STUDY

The Department of Electrical and Computer Engineering offers programs leading to the Master of Science and Doctor of Philosophy degrees. Graduate study in the department is organized into three groups: computer engineering including computer architecture, computer networks, and VLSI/microelectronics; electrophysics including electromagnetics and electronic materials and devices; and systems including control and robotics, biomedical engineering, power, and signal processing and communications. An interdisciplinary approach marks many of the research projects that faculty share with graduate students.
Master of Science

In addition to meeting the requirements of the University and of the College of Engineering, students must meet the requirements specified below.

Admission

Applicants for admission should possess a Bachelor of Science degree in electrical engineering or a related field such as physics, mathematics, or computer science, and should have a grade–point average that would indicate success in graduate study.

Students who are admitted without a Bachelor of Science degree in electrical engineering may be required to complete collateral courses.

International applicants are required to submit Graduate Record Examination General Test scores.

Requirements for the Master of Science Degree in Electrical Engineering

The student must complete a total of 30 credits under either Plan A (with thesis) or Plan B (without thesis) and meet the requirements specified below:

Requirements for Both Plan A and Plan B:

1. Core Courses. At least one course from at least three of the following six areas:

2. Supporting Courses: At least 6 credits in approved courses in areas such as mathematics, statistics, or physics.

Doctor of Philosophy

Admission

International applicants are required to submit Graduate Record Examination General Test scores.

Requirements for the Doctor of Philosophy Degree in Electrical Engineering

In addition to meeting the requirements of the University and of the College of Engineering, students must meet the requirements specified by their guidance committees. All courses that are used to satisfy the requirements for the degree must have been completed under the numerical grading system.

DEPARTMENT of MECHANICAL ENGINEERING

Eann Patterson, Chairperson

UNDERGRADUATE PROGRAMS

MECHANICAL ENGINEERING

Mechanical engineers apply the fundamental principles of motion (mechanics) and energy (thermosciences) to serve the needs of people through the creative problem-solving process known as engineering design. These principles are represented in the subjects of solid and fluid mechanics, thermodynamics, heat transfer, mechanical systems, and material science. Practicing mechanical engineers work in many application areas, which include such industries as automotive, chemical, energy, consumer product, aerospace, computer and electronic, and biomedical.

The undergraduate mechanical engineering program prepares its graduates for the mechanical engineering profession through a foundation of engineering fundamentals; the development of analytical, computational, and experimental capabilities to recognize, model, and solve engineering problems; and the application of the engineering design method. Communication and teaming skills are integrated throughout the program.

For students who desire an international experience as part of their education, the department sponsors various programs such as "Mechanical Engineering in Aachen, Germany." During the spring semester, a small group of juniors and seniors pursue their normal studies abroad at the Technical University of Aachen where they have outstanding opportunities to participate in advanced research, explore industrial activities, and experience European culture and lifestyle.

The Bachelor of Science Degree program in Mechanical Engineering is accredited by the Engineering Accreditation Commission of ABET, 111 Market Place, Suite 1050, Baltimore, MD 21202-4012; telephone (410) 347-7700.

Requirements for the Bachelor of Science Degree in Mechanical Engineering

1. The University requirements for bachelor’s degrees as described in the Undergraduate Education section of this catalog; 128 credits, including general elective credits, are required for the Bachelor of Science degree in Mechanical Engineering.

   The University’s Tier II writing requirement for the Mechanical Engineering major is met by completing Mechanical Engineering 332, 412, 451, 461, and 481. Those courses are referenced in Item 3. b. (1) below.

   Students who are enrolled in the College of Engineering may complete the alternative track to Integrative Studies in Biological and Physical Sciences that is described in Item 1. under the heading Graduation Requirements for All Majors in the College statement. Certain courses referenced in requirement 3. below may be used to satisfy the alternative track.

2. The requirements of the College of Engineering for the Bachelor of Science degree.

   The credits earned in certain courses referenced in requirement 3. below may be counted toward College requirements as appropriate.

3. The following requirements for the major: ........................................... CREDITS
   a. All of the following courses outside the Department of Mechanical Engineering: .......................................................... 23
      Mechanical Engineering:
      CEM 161 Chemistry Laboratory I .............................................. 1
      ECE 345 Electronic Instrumentation and Systems ....................... 3
      ME 180 Engineering Graphics Communications ........................ 3
      ME 221 Statics ................................................................. 3
      ME 222 Mechanics of Deformable Solids ................................ 4
      ME 361 Dynamics ............................................................ 3
      MSE 250 Materials Science and Engineering ............................. 3
      STT 351 Probability and Statistics for Engineering ................. 3
Option in Engineering Mechanics

An option in Engineering Mechanics is available to, but not required of, any student enrolled in the Bachelor of Science degree in Mechanical Engineering. Completing the Bachelor of Science degree in Mechanical Engineering with an option in engineering mechanics may require more than 128 credits.

Engineering Mechanics Option

To earn a Bachelor of Science degree in Mechanical Engineering with a engineering mechanics option, students must complete requirements 1., 2., and 3. above and the following:

- The following course .................................................... 3
  ME 423 Intermediate Mechanics of Deformable Solids

- Three of the following courses ........................................ 9
  ME 424 Computational Mechanics
  ME 425 Experimental Mechanics
  ME 456 Mechatronic System Design
  ME 464 Intermediate Dynamics

Upon completion of the required courses for the option, the student should contact the Department of Mechanical Engineering and request certification for the completion of the option. After the certification is approved the chairperson of the department and the Dean of the College of Engineering, the Office of the Registrar will enter on the student’s academic record the name of the option and the date that it was completed. This certification will appear on the student’s transcript.

Option in Manufacturing Engineering

An option in Manufacturing Engineering is available to, but not required of, any student enrolled in the Bachelor of Science degree in Mechanical Engineering. Completing the Bachelor of Science degree in Mechanical Engineering with an option in manufacturing engineering may require more than 128 credits.

Manufacturing Engineering Option

To earn a Bachelor of Science degree in Mechanical Engineering with a manufacturing engineering option, students must complete requirements 1., 2., and 3. above and the following:

- All of the following courses ............................................. 10
  EC 210 Economics Principles Using Calculus
  ME 372 Machine Tool Laboratory
  ME 477 Manufacturing Processes
  ME 478 Product Development

- One of the following courses ........................................... 3
  CHE 472 Composite Materials Processing
  ECE 415 Computer Aided Manufacturing
  MSE 426 Introduction to Composite Materials

Upon completion of the required courses for the option, the student should contact the Department of Mechanical Engineering and request certification for the completion of the option. After the certification is approved the chairperson of the department and the Dean of the College of Engineering, the Office of the Registrar will enter on the student’s academic record the name of the option and the date that it was completed. This certification will appear on the student’s transcript.

GRADUATE STUDY

The Department of Mechanical Engineering offers programs leading to Master of Science and Doctor of Philosophy degrees, both in mechanical engineering and in engineering mechanics. Individual programs can be designed from a wide range of courses to suit the background, capabilities and aims of the student. Studies in the department may be supplemented by courses offered by other departments in the College of Engineering and in other colleges. Courses and research opportunities are available in the following areas: fluid mechanics, combustion, heat transfer, thermodynamics, bioengineering, internal combustion engines, turbomachinery, computational fluid dynamics, system dynamics, controls, vibrations, nonlinear dynamics, mechatronics, manufacturing, computational design, computational solid mechanics, mechanics and processing of composite materials, elasticity, nonlinear elasticity, plasticity, experimental mechanics, and micromechanics.

ENGINEERING MECHANICS

Master of Science

In addition to meeting the requirements of the University and of the College of Engineering, students must meet the requirements specified below.

Admission

The department welcomes applications from students who possess a bachelor’s degree in a related engineering or science discipline.

Students who are admitted to the master’s program with a degree in a discipline other than engineering mechanics and who have not completed Mechanical Engineering 221, 222, 361, and 423 or equivalent courses may be admitted with provisional status. Such students will be required to demonstrate proficiency in the material in the courses referenced above, either by completing each of those courses with a grade of at least 3.0 or by passing an examination on the material in those courses sanctioned by the Department Graduate Studies Committee. Of the courses referenced above, only Mechanical Engineering 423 may be counted toward the requirements for the master’s degree.
Requirements for the Master of Science Degree in Engineering Mechanics

The student must complete a total of 30 credits for the degree under either Plan A (with thesis) or Plan B (without thesis) and must meet the requirements specified below:

Requirements for Both Plan A and Plan B:
1. The following core courses in engineering mechanics: Mechanical Engineering 825 or 861, 820, and 821.
2. At least one of the following core courses in mechanical engineering: Materials Science and Engineering 851, 855, 862, or 865.
3. At least one credit of Materials Science and Engineering 885.
4. At least one course in mathematics or statistics at the 400–level or above approved by the student's academic adviser.

Doctor of Philosophy

In addition to meeting the requirements of the University and of the College of Engineering, students must meet the requirements specified below.

Admission

An applicant for admission must identify at least one prospective faculty adviser that he or she would like to direct his or her program of study. Admission to the Ph.D program is contingent on a faculty adviser accepting the student as an advisee.

Requirements for the Doctor of Philosophy Degree in Engineering Mechanics

The student must complete:
1. At least one of the following core courses in materials science and engineering: Materials Science and Engineering 851, 855, 862, or 865.
2. At least one course in mathematics or statistics at the 400–level or above.
These requirements are waived for those students who completed equivalent courses prior to enrolling in the doctoral program.

MECHANICAL ENGINEERING

Master of Science

In addition to meeting the requirements of the University and of the College of Engineering, students must meet the requirements specified below.

Admission

An applicant should possess a bachelor's degree in mechanical engineering or a related field.

The applicant must submit scores from the Graduate Record Examination General Test.

Requirements for the Master of Science Degree in Mechanical Engineering

The student must complete a total of 30 credits for the degree under either Plan A (with thesis) or Plan B (without thesis) and meet the requirements specified below:

Requirements for Both Plan A and Plan B:
The student must:
1. Complete at least one course in three of the following four areas:
   b. Fluid Mechanics: Mechanical Engineering 830
2. Complete at least 6 additional credits in Mechanical Engineering courses at the 800–900 level, not including Mechanical Engineering 898 or 899.

Additional Requirements for Plan A:
The student must:
1. Complete at least 20 credits in courses at the 800–900 level including at least 6, but not more than 8, credits in Mechanical Engineering 899.
2. Submit a brief thesis proposal for approval by the student's academic adviser early in the student's program of study.

Additional Requirements for Plan B:
The student must complete at least 22 credits in courses at the 800–900 level.

Doctor of Philosophy

In addition to meeting the requirements of the University and of the College of Engineering, students must meet the requirements specified below.

Admission

The applicant must submit scores from the Graduate Record Examination General Test.

Requirements for the Doctor of Philosophy Degree in Mechanical Engineering

In addition to meeting the requirements of the University and of the College of Engineering, students must meet the requirements specified by their guidance committees.
