We have entered a new and exciting era of scientific understanding that has taken concepts like genetic engineering, nanoscience and biotechnology out of the realm of science fiction and into everyday life. New applications of science will continue to have profound effects. Thus, graduates with training in any of the biological, mathematical, or physical sciences offered in the College of Natural Science are finding new employment opportunities with industries on the cutting edge of high technology, as well as in teaching, communications, professional and environmental fields, and many other areas.

The mission of the College of Natural Science closely parallels the mission of the University as defined by the Boldness by Design imperatives: a commitment to research, education, and service. The College of Natural Science is one of the largest colleges within the University, overseeing academic programs in the departments of Biochemistry and Molecular Biology, Chemistry, Food Science and Human Nutrition, Geological Sciences, Mathematics, Microbiology and Molecular Genetics, Physics and Astronomy, Physiology, Plant Biology, Statistics and Probability, and Zoology. It also administers the Biomedical Laboratory Diagnostics Program and the W. K. Kellogg Biological Station, a world-class biological research center. All departments within the College offer both undergraduate and graduate students experience conducting research in laboratories. Students in the College of Natural Science have access to a range of research and laboratory facilities on campus, in addition to unique research opportunities in facilities like the MSU/DOE Plant Research Laboratory, the National Superconducting Cyclotron Laboratory, and the W. K. Kellogg Biological Station. A special on-site research and science teaching program for both undergraduate and graduate students is offered at the Station during the summer session including the SpartaNature seminar for incoming freshmen. Graduate students may also choose to enter one of the college's interdisciplinary research programs in Genetics; Cell and Molecular Biology; Mathematics Education, Neuroscience; or Ecology, Evolutionary Biology and Behavior; or Quantitative Biology.

Promoting science literacy—opening up the world of science to our youth—is the key to comprehending the total impact of new scientific developments in our lives. Already our environment is threatened by such things as insecticides, food additives, and toxic wastes. Our future leaders must have an appreciation of the sciences in order to make informed decisions regarding the preservation of our environment. To that end, the College of Natural Science offers credit courses in communities throughout Michigan in cooperation with University Outreach and Engagement programs.

UNDERGRADUATE PROGRAMS

Undergraduate students in the College of Natural Science may opt for either a Bachelor of Science or a Bachelor of Arts degree program.

The college offers programs of study culminating in a bachelor's degree with either a departmental or an interdepartmental major. All programs are liberal in character and involve a specified minimum of nonscience credits in addition to those needed to meet integrative studies requirements. Electives in both major and nonmajor areas make it possible to mold a program of interest and challenge for each student.

The departmental major features study in a single discipline and is generally considered the proper choice for concentrated study in a limited area. A departmental major consists of not fewer than 27 nor more than 79 credits in courses recognized by the college as applicable to the major. Specific major requirements
are given in the sections that follow. Departmental majors are available through Lyman Briggs College as coordinate majors.

The interdepartmental major features study in several disciplines with no single discipline being dominant and is generally considered the proper choice if breadth of background in several fields of the natural sciences is desired. The college offers interdepartmental majors: biological science--interdepartmental, earth science--interdepartmental, human biology, and physical science. In addition, the College of Education, in cooperation with the College of Natural Science, offers an integrated science teaching major for students accepted in elementary education, as well as an integrated science endorsement for secondary education science majors. For further information, refer to the section on MSU SUBJECT MATTER TEACHING MAJORS AND MINORS FOR TEACHER PREPARATION AND CERTIFICATION in the Department of Teacher Education section of the catalog. The interdepartmental major consists of a minimum of 45 credits (biological science) or 36 credits (earth science) and 50 credits (physical science) and not more than 67 credits in courses recognized by the college as applicable toward the major. Interdepartmental majors are available through Lyman Briggs College as coordinate majors. Interdisciplinary majors are also available through Lyman Briggs College.

Major Preference Students
Students who meet the general requirements for admission to the university shown in the Undergraduate Education section of this catalog and who are not enrolled in Lyman Briggs College are enrolled in the Undergraduate University Division but may declare a major preference in the College of Natural Science and be assigned an academic advisor in this college. All programs in the biological sciences, physical sciences, and mathematics presume a minimum of two and one-half entrance units in mathematics (one and one-half units of algebra and one unit of geometry).

Admission as a Junior to the College of Natural Science
1. Completion of at least 56 credits acceptable to the college with an academic record which at least meets the requirements of Academic Standing of Undergraduate Students.
2. Acceptance as a major in one of the academic programs of the college.

Graduation Requirements
1. The University requirements for bachelor's degrees as described in the Undergraduate Education section of this catalog. Students who are enrolled in majors leading to Bachelor of Science and Bachelor of Arts degrees in the College of Natural Science may complete an alternative track to Integrative Studies in Biological and Physical Sciences that consists of:
   a. One course in Biological Science, Entomology, Microbiology, Physiology, Plant Biology, or Zoology
   b. Chemistry 141 or 151 or 181H
   c. Two credits of laboratory experience in biological or physical science.
   Credits earned in courses in the alternative track may also be counted toward college and major requirements for Bachelor of Science and Bachelor of Arts degrees.
2. The requirements of the College of Natural Science for the Bachelor of Science and Bachelor of Arts degrees that are listed below:
   a. The requirements for either a departmental major or an interdepartmental major of 27 to 79 credits. For specific requirements, see the sections that follow.
   b. A minimum grade–point average of 2.00 in courses in the student's major; i.e., in all courses that are required for the major and that are not counted toward college and University requirements.
   c. The following credit distribution requirements:
      1. A minimum of 30 credits in courses numbered 300 and above.
      2. A maximum of 67 credits in courses offered in a single curriculum division of the college; i.e., Biological Science or Mathematical Science or Physical Science.
   d. Only credits in courses graded on the numerical or Pass–No Grade system may be counted toward college and major requirements for Bachelor of Science and Bachelor of Arts degrees in the College of Natural Science. College of Natural Science students may not enroll in courses that are to be counted toward college and major requirements, including courses in other colleges, on a Credit–No Credit basis.
3. The requirements of the College of Natural Science for either the Bachelor of Science degree or the Bachelor of Arts degree that are listed below:
   a. Requirements for the Bachelor of Science degree:
      1. One semester of calculus.
      2. A second semester of calculus or one semester of statistics and probability.
      3. Two semesters of chemistry including at least one laboratory experience.
      4. Two semesters of physics.
      5. One semester of biological science.
   b. Requirements for the Bachelor of Arts degree:
      1. One semester of calculus.
      2. A second semester of calculus or one semester of statistics and probability.
      3. One semester each of biological science, chemistry, and physics including at least one laboratory experience.
      4. Six credits in courses in the arts and humanities or the social, behavioral, and economic sciences beyond the credits that are counted toward the University's Integrative Studies requirement.

Many major programs which lead to a Bachelor of Science degree require a proficiency greater than the college established minimum in one, or more, of the following fields: chemistry, physics, and mathematics. Also, for either the Bachelor of Arts or the Bachelor of Science degree, when two or more options exist for the fulfillment of any college—established requirement, one of the options may be specified as a major requirement. The specific requirements for each major program are given in the sections that follow.

Chemistry and mathematics requirements should be completed to the fullest extent possible during the freshman and sophomore years. Bachelor of Science candidates with a major in a physical science should complete the physics requirement during the sophomore year. Students with a major in a biological science may postpone completion of the physics requirement until the junior year, but should complete Biological Science 110, 111 by the end of the sophomore year. The biology courses should be completed during the freshman year because they are prerequisites to most of the courses offered by the departments in the biological sciences. All students should complete the University's Tier I writing requirement during the freshman year.
Honors Study

The College of Natural Science encourages honors students to develop distinctive undergraduate programs in their chosen fields. All qualified students in the college may also be members of the Honors College. A member of the faculty is selected to serve as advisor to Honors College students in each major field, and it is the advisor’s responsibility to help the student plan a rigorous and balanced program which will also reflect the student’s special interests and competencies.

The departments of the college annually offer numerous honors opportunities at both introductory and advanced levels. At the introductory level these consist chiefly of regularly offered honors courses. Honors options are also available in many other courses. At the advanced level honors students are encouraged to undertake faculty-guided independent research in their fields of specialization. These honors experiences are provided mainly, but not exclusively, for Honors College students. In addition, honors undergraduates are encouraged, when appropriate, to undertake work at the graduate level.

Charles Drew Science Scholars

The Charles Drew Science Scholars program was created to help students currently underrepresented in the sciences achieve the best possible preparation for pursuing their educational goals in science and mathematics. The program is designed to: a) assist students with the transition from high school to college and b) to expose them to the vast number of career opportunities in the sciences.

These goals are attained, in part, through problem-solving courses, specially designed courses in mathematics, and designated sections of biology and chemistry courses. In addition, tutoring is available and students are exposed to both successful undergraduate and graduate role models.

The purpose of this program is, through advising and focused academic support, to help interested and motivated students develop the foundation for successful careers in science. Students are encouraged to contact the College of Natural Science for additional information about this program.

Preprofessional Programs

All professional colleges have established minimum requirements in selected areas of knowledge for admission (hereafter referred to as admission requirements). Although fulfilling these requirements does not in itself guarantee admission, their fulfillment is a necessary first step for those who aspire to enter a professional college.

At Michigan State University students may select programs of study which help to prepare them for enrollment in professional colleges. Since the admission requirements of various professional colleges vary, it is not feasible to establish a single program that satisfies the admission requirements of all colleges in a given profession. However, in the fields of dentistry, allopathic and osteopathic medicine, podiatry, and optometry, the College of Natural Science does have suggested programs of study. These programs satisfy the minimum admission requirements of most professional colleges. It is the student’s responsibility to determine whether or not the proposed program meets the minimum admission requirements of a particular professional college.

There are a number of programs of study which may be completed in the normal four years and which provide both the academic preparation for admission to a professional school and fulfill the requirements for a bachelor’s degree. The preprofessional programs as outlined do not in themselves lead to a bachelor’s degree.

PREDENTAL PROGRAM:

Students who meet the requirements for admission to the university as freshmen and sophomores, as shown in the Undergraduate Education section of this catalog, may select the premedical program in the College of Natural Science as their major preference. Students who are enrolled in the premedical program are enrolled in the Undergraduate University Division, but receive academic advising through the college.

University regulations require that a student who has arrived at junior standing must select a major leading to a baccalaureate degree. The College of Natural Science does not offer a bachelor’s degree program for premedical students. Therefore, upon reaching junior standing, students who have been enrolled in the premedical program must be admitted to a major in either the College of Natural Science or in another college in order to complete the requirements for a bachelor’s degree, regardless of whether they have completed the requirements for the premedical program.

Requirements for the Premedical Program

1. A total of 60 credits in courses in the natural sciences, mathematics, social sciences, humanities, and writing, including courses that are used to satisfy the University requirements and the courses that are listed below:

   a. All of the following courses (30 credits):
      - BS 110 Organisms and Populations ........................................... 3
      - BS 111 Cells and Molecules ..................................................... 3
      - BS 111L Cell and Molecular Biology Laboratory .......................... 2
      - CEM 141 General Chemistry ..................................................... 4
      - CEM 161 Chemistry Laboratory I ............................................... 1
      - CEM 251 Organic Chemistry I ................................................... 3
      - CEM 252 Organic Chemistry II ................................................. 3
      - CEM 255 Organic Chemistry Laboratory ...................................... 2
      - PHY 231 Introductory Physics I ............................................... 3
      - PHY 232 Introductory Physics II ................................................. 1
      - PHY 251 Introductory Physics Laboratory I .................................. 1
      - PHY 252 Introductory Physics Laboratory II ................................. 1
      - Some dental colleges do not require Chemistry 252.
   b. 3 additional credits in general chemistry selected from the following courses: Chemistry 142, 152, and 162.
   c. 3 credits in a biological science course in addition to Biological Science 110, 111, and 111L.

2. Students who are enrolled in the premedical program should complete the University requirements for bachelor’s degrees as described in the Undergraduate Education section of this catalog.

Students who are enrolled in the Preprofessional Program in the College of Natural Science may complete an alternative track to Integrative Studies in Biological and Physical Sciences that consists of the following courses: Biological Science 110, 111, and 111L and Chemistry 141. The completion of Biological Science 110 and 111L satisfies the laboratory requirement. Biological Science 110, 111, and 111L and Chemistry 141 may be counted toward both the alternative track and the requirements for the preprofessional program referenced in item 1. a. above.

A Tier I writing course is included in the University requirements. Students who are enrolled in the preprofessional program are required to meet the Tier II writing requirement approved for the student’s major leading to the bachelor’s degree.

PREMEDICAL PROGRAM (Including Pre–Osteopathy, Pre–Podiatry, Pre–Pharmacy, and Pre–Physician’s Assistant):

Students who meet the requirements for admission to the university as freshmen and sophomores, as shown in the Undergraduate Education section of the catalog, may select the premedical program in the College of Natural Science as their major preference. Students who are enrolled in the premedical program must be admitted to a major in either the College of Natural Science or in another college in order to complete
the requirements for a bachelor's degree, regardless of whether they have completed the requirements for the premedical program.

Requirements for the Premedical Program (including Pre–Osteopathy, Pre–Podiatry, Pre-Pharmacy, and Pre-Physician's Assistant)

A Tier I writing course is included in the University requirements. Students who are enrolled in the preoptometry program are required to meet the Tier II writing requirement approved for the student's major leading to the bachelor's degree.

2. Students who are enrolled in the preoptometry program should complete the University requirements for bachelor's degrees as described in the Undergraduate Education section of this catalog.

Requirements for the Preoptometry Program

1. A total of 90 credits in courses in the natural sciences, mathematics, social sciences, humanities, and writing, including courses that are used to satisfy the University requirements and the courses that are listed below:

   a. All of the following courses (30 credits):

      | Course                                    | Credits |
      |-------------------------------------------|---------|
      | BS 110 Organisms and Populations           | 4       |
      | BS 111 Cells and Molecules                 | 3       |
      | BS 111L Cell and Molecular Biology Laboratory | 2      |
      | CEM 141 General Chemistry                  | 4       |
      | CEM 161 Chemistry Laboratory I             | 1       |
      | CEM 251 Organic Chemistry I                | 3       |
      | CEM 252 Organic Chemistry II               | 3       |
      | CEM 255 Organic Chemistry Laboratory       | 2       |
      | PHY 231 Introductory Physics I             | 3       |
      | PHY 232 Introductory Physics II            | 3       |
      | PHY 251 Introductory Physics Laboratory I  | 1       |
      | PHY 252 Introductory Physics Laboratory II | 1       |

   b. 3 additional credits in general chemistry selected from the following courses: Chemistry 142, 152, and 182.

   c. One 300–400 level course in biology with laboratory (3 credits) and another course in biology (3 credits).

   d. One additional course in biology, chemistry or physics (3 credits).

   NOTE: Higher level equivalent biological science, chemistry, and physics course sequences may be substituted for the sequences listed above. Courses in biochemistry and genetics are highly recommended.

   2. Students who are enrolled in the premedical program should complete the University requirements for bachelor's degrees as described in the Undergraduate Education section of this catalog.

   Students who are enrolled in the Premedical Program (including Pre–Osteopathy, Pre–Podiatry, Pre-Pharmacy, and Pre-Physician's Assistant) in the College of Natural Science may complete an alternative track to Integrative Studies in Biological and Physical Sciences that consists of the following courses: Biological Science 110, 111, and 111L and Chemistry 141. The completion of Biological Science 110 and 111L satisfies the laboratory requirement. Biological Science 110, 111, and 111L and Chemistry 141 may be counted toward both the alternative track and the requirements for the premedical program referenced in item 1. a. above.

   A Tier I writing course is included in the University requirements. Students who are enrolled in the premed program are required to meet the Tier II writing requirement approved for the student's major leading to the bachelor's degree.

PREOPTOMETRY PROGRAM:

Students who meet the requirements for admission to the university as freshmen and sophomores, as shown in the Undergraduate Education section of this catalog, may select the preoptometry program in the College of Natural Science as their major preference. Students who are enrolled in the preoptometry program are enrolled in the Undergraduate University Division, but receive academic advising through the college.

University regulations require that a student who has arrived at junior standing must select a major leading to a baccalaureate degree. The College of Natural Science does not offer a bachelor's degree program for preoptometry students. Therefore, upon reaching junior standing, students who have been enrolled in the preoptometry program must be admitted to a major in either the College of Natural Science or in another college in order to complete the requirements for a bachelor's degree, regardless of whether they have completed the requirements for the preoptometry program.

Requirements for the Preoptometry Program

1. Specific courses are not listed since admission requirements of the colleges of optometry vary greatly and can be met in several ways. The common pattern of admission requirements is a total of 90 semester credits of which 6 to 8 credits are elected from each of the following areas: English, physics, mathematics, biological science, chemistry, psychology, and social science. Courses that are used to satisfy University, college, and major requirements may be counted toward the admission requirements of colleges of optometry.

2. Students who are enrolled in the preoptometry program should complete the University requirements for bachelor's degrees as described in the Undergraduate Education section of this catalog.

   A Tier I writing course is included in the University requirements. Students who are enrolled in the preoptometry program are required to meet the Tier II writing requirement approved for the student's major leading to the bachelor's degree.

TEACHER CERTIFICATION OPTIONS

The following disciplinary majors leading to bachelor's degrees in the College of Natural Science are available for teacher certification: biological science–interdepartmental, chemistry, earth science–interdepartmental, mathematics, physical science–interdepartmental, and physics.

The following disciplinary minors in the College of Natural Science are also available for teacher certification: biological science, chemistry, earth science, mathematics, and physics.

Students interested in elementary teacher certification in science should reference the section on MSU SUBJECT MATTER TEACHING MAJORS AND MINORS FOR TEACHER PREPARATION AND CERTIFICATION in the Department of Teacher Education section of this catalog.

Students who elect the biological science–interdepartmental or the physical science–interdepartmental disciplinary major, or the biological science disciplinary minor, must contact the Division of Science Education of the College of Natural Science.

Students who elect a chemistry disciplinary major or the chemistry disciplinary minor must contact the Department of Chemistry.

Students who elect the earth science–interdepartmental disciplinary major or the earth science disciplinary minor must contact the Department of Geological Sciences.

Students who elect a mathematics disciplinary major or the mathematics disciplinary minor must contact the Department of Mathematics.

Students who elect a physics disciplinary major or the physics disciplinary minor must contact the Department of Physics and Astronomy.

For additional information, refer to the statements on the disciplinary majors referenced above and to the statement on TEACHER CERTIFICATION in the Department of Teacher Education section of this catalog.

College of Natural Science Dual Degree Program: Bachelor of Science and Master of Science

The dual degree program provides an opportunity for academically talented undergraduate students who are enrolled in Bachelor of Science degree programs in the College of Natural Science to enroll in graduate courses and conduct research toward the Master of Science degree while completing the last two years of their bachelor's degree programs.

All of the Bachelor of Science and Master of Science degree programs in the College of Natural Science are available for inclusion in the dual degree program. Although most of the Bachelor of Science and Master of Science degree programs are administered by departments and schools within the college, a few such programs are administered by the college. During the second semester of the sophomore year, the student should contact the unit or units that administer the Bachelor of Science and Master of Science degree programs that the student plans to pursue while enrolled in the dual degree program and apply for admission to those programs.

A student who is accepted into the dual degree program can be admitted to both the Bachelor of Science degree program and the Master of Science degree program as early as the beginning of the junior year. Upon completion of the requirements for both the
Bachelor of Science degree and the Master of Science degree, both degrees are awarded simultaneously. The Master of Science degree will not be awarded until the student has completed the requirements for the Bachelor of Science degree.

To be admitted to the dual degree program, an applicant must:
1. Have a grade-point average of 3.00 or higher in all undergraduate course work.
2. Have a grade-point average of 3.00 or higher in all courses in the College of Natural Science.
3. Be accepted for admission by the graduate admissions committee of the college or department or school.

Departments and schools may specify additional requirements for admission to the dual degree program. The student should contact the appropriate department or school for additional information.

Within the first semester of enrollment in the dual degree program, the student's master's advisor must be identified and the student's master's guidance committee must be established. The advisor and the committee assist the student in developing a program of study for the Master of Science degree.

The student's program of study must be approved by the committee.

A student who is admitted to the dual degree program must:
1. Satisfy all of the requirements for the Bachelor of Science degree program to which the student was admitted.
   Although a minimum of 120 credits is required for the Bachelor of Science degree, more than 120 credits may be required for a given degree program.
2. Satisfy all of the requirements for the Master of Science degree program to which the student was admitted after being admitted to that program.
   Although a minimum of 30 credits is required for the Master of Science degree, more than 30 credits may be required for a given degree program.
   The credits and courses that are used to satisfy the requirements for the Bachelor of Science degree may not be used to satisfy the requirements for the Master of Science degree.

Departments and schools may specify additional requirements for the dual degree program. The student should contact the appropriate department or school for additional information.

GRADUATE STUDY

The graduate programs of the College of Natural Science provide for advanced study with emphasis either in a single discipline or in the multidisciplinary areas of the biological sciences and the physical sciences. The graduate programs are designed to develop independent effort, encourage creative thinking, and educate the student in the fundamentals of basic research.

The programs of study lead to one of the following degrees: Master of Arts, Master of Science, Master of Arts for Teachers, and Doctor of Philosophy. The specific degrees available and the programs leading to them for each discipline are given in the departmental or program listing.

Each student's program of study is arranged to suit individual needs, the only restriction being that the final program must conform to one of the general patterns approved by the faculty. The general university requirements for these degrees are given in the Graduate Education section of this catalog. A department or college may specify additional requirements. Most of the departments in the college require participation in teaching during the course of the graduate program.

Students who are enrolled in doctoral degree programs in departments and programs emphasizing environmental science and policy may elect the Graduate Specialization in Environmental Science and Policy. For additional information, refer to the Graduate Specialization in Environmental Science and Policy statement in the College of Social Science section of this catalog.

Students who are enrolled in master's and doctoral degree programs in the College of Agriculture and Natural Resources, the College of Natural Science, and the College of Veterinary Medicine may elect the Graduate Specialization in Fish and Wildlife Disease Ecology and Conservation Medicine. For additional information, refer to the statement on Graduate Specialization in Fish and Wildlife Disease Ecology and Conservation Medicine in the College of Agriculture and Natural Resources section of this catalog.

Students who are enrolled in Master of Science degree programs in the departments of Entomology, Microbiology, and Molecular Genetics, and Plant Pathology may elect a Specialization in Food Safety. For additional information, refer to the statement on the specialization in the College of Veterinary Medicine section of this catalog.

Master of Arts for Teachers

The Master of Arts for Teachers degree is designed to provide an enriching educational experience for teachers who are interested in a program of graduate study with less specialization in a science area than is common in most master's degree programs. The degree is for teachers who wish to take graduate work in a subject–matter area but who do not anticipate continuation of graduate study beyond the master's level. However, the student who holds the Master of Arts for Teachers degree may, upon the satisfactory completion of additional work as recommended by the appropriate academic unit, become eligible for admission to a doctoral program.

The degree may be earned with a major in chemistry, general science, geological sciences, or mathematics.

In addition to meeting the requirements of the university as described in the Graduate Education section of this catalog, students must meet the requirements specified below.

Admission

An applicant for admission to the Master of Arts for Teachers program must be a senior in or a graduate of an institution having substantially the same requirements for the bachelor's degree as Michigan State University, and possess, or be a candidate for, a teacher's certificate. Admission is recommended by the director of the program in which admission is sought, with approval of the Dean of the College of Natural Science.

Requirements for the Master of Arts for Teachers Degree

An appropriate course of study is planned with the candidate by an advisor from the academic unit in the College of Natural Science to which the candidate has been admitted. The minimum number of credits required for the degree is 30, in addition to any credits which must be taken to complete requirements for provisional teacher certification. A comprehensive written or oral examination may be required. A thesis is usually not required, but should one be required, a maximum of 10 semester credits may be allotted for it. The student must complete the requirements for provisional teacher certification before the degree may be granted.
Academic Standards
The minimum standard is a 3.00 grade–point average. Standards may be set higher than the minimum by the academic unit responsible for the degree program. The accumulation of grades below 3.0 in more than three courses of 3 or more credits each, or deferred in more than three courses of 3 or more credits each at any given time, or a combination of the above in excess of four courses may remove the student from candidacy for the degree. A student who fails to meet the academic standards for any program may, on recommendation of the director, be required by the dean to withdraw at the end of the semester.

Residence
The minimum residence requirement is 8 credits on campus. Some programs may require more.

Time Limit
The time limit for completion of the master's degree is six years from the beginning of the first semester in which credit was earned toward the degree.

Master of Science and Master of Arts
The Master of Science is the conventional degree for all majors in the College of Natural Science. The Master of Arts may be conferred upon student request and college approval in the Department of Statistics and Probability.

In addition to meeting the requirements of the university as described in the Graduate Education section of this catalog, students must meet the requirements specified below.

Admission
Admission to provisional status may be used to indicate incomplete records, incomplete interpretation of available records, a grade–point average below 3.00 but with other evidence of good capacity, or minor deficiencies in subject matter.

Students may be transferred from one classification to another at any time by the dean, normally upon the recommendation of the department.

The college as a whole does not require an entrance examination. However, all departments expect students to provide Graduate Record Examination General Test scores.

Requirements for the Master of Science or Master of Arts Degree
For Plan A, a maximum of 15 credits of master's thesis research may be permitted.

Academic Standards
The minimum standard is a 3.00 grade–point average. Standards may be set higher than the minimum by the academic unit responsible for the degree program. The accumulation of grades below 3.0 in more than three courses of 3 or more credits each, or deferred in more than three courses of 3 or more credits each at any given time, or a combination of the above in excess of four courses automatically removes the student from candidacy for the degree. A student who fails to meet the academic standards for any program may, on recommendation of the director, be required by the dean to withdraw at the end of any semester.

Doctor of Philosophy
The Doctor of Philosophy degree is awarded for an original contribution to scientific knowledge and high attainment of scholarship in the mathematical or natural sciences. This degree, with its emphasis on research in the frontiers of science, is the traditional terminal degree in the College of Natural Science.

In addition to meeting the requirements of the university as described in the Graduate Education section of this catalog, students must meet the requirements specified below.

Admission
Admission may be granted to a student who has a record of high scholastic attainment and demonstrated research potential acceptable to the department or program and to the college. A master's degree in an appropriate subject–matter field may be required, but the completion of a master's degree is not a guarantee of admission. Most programs require the applicant to submit Graduate Record Examination General Test scores; many also require the Graduate Record Examination Subject Test in the area of specialization.

Admission to provisional status may be used to indicate incomplete records, incomplete interpretation of available records, grade–point average below 3.00 but with additional evidence of good capacity, or minor deficiencies in subject matter.

Students may be transferred from one classification to another at any time by the dean, normally upon the recommendation of the department.

Academic Standards
The minimum standard is a 3.00 grade–point average. Standards may be set higher than the minimum by the academic unit responsible for the degree program. The accumulation of grades below 3.0 in more than three courses of 3 or more credits each, or deferred in more than three courses of 3 or more credits each at any given time, or a combination of the above in excess of four courses automatically removes the student from candidacy for the degree. A student who fails to meet the academic standards for any program may, on recommendation of the director, be required by the dean to withdraw at the end of any semester.

Residence
In some programs a student may be permitted to enter the doctoral program without taking a master's degree. In such cases 30 semester credits of approved work are considered the equivalent of the master's degree, and the minimum residence requirement for the combined program is three semesters, involving at least 4 credits of graduate work each semester.
MATHEMATICS EDUCATION

The Master of Science and Doctor of Philosophy degrees in Mathematics Education are administered jointly by the College of Natural Science and the College of Education. The College of Natural Science is the primary administrative unit.

Master of Science

The Master of Science Degree in Mathematics Education is designed for persons who show promise of becoming researchers and leaders in state, national, and international mathematics education communities. The program prepares researchers and leaders to address critical questions about mathematics education. Students will have opportunities to develop analytical perspectives on current issues in mathematics education.

Students who may be interested in this program include the following: (1) graduates of undergraduate mathematics or mathematics education programs who are interested in research-based academic careers; (2) K-12 teachers who intend to return to the classroom with strong, research-oriented knowledge and experience in mathematics education; (3) graduates of undergraduate mathematics or mathematics education programs who are interested in the application of knowledge to curriculum or policy development, curriculum development, policy, assessment, etc., not necessarily with a focus on research; and (4) graduates of master’s or doctoral programs in mathematics who wish to become mathematics education faculty in a college or university mathematics or education department.

Students will have opportunities to acquire an understanding and experience in various aspects of the mathematics education field including investigation of mathematical learning and teaching, the development of instructional materials, participation in policy formation and analysis, development and use of assessment, and integration of technology into mathematics learning and teaching.

In addition to meeting the requirements of the university, students must meet the requirements specified below.

Admission

The program admits students with a variety of backgrounds. Some students will have equally strong backgrounds in education and mathematics. Others may have more extensive prior preparation in one of these two disciplines. Candidates should have the equivalent of an undergraduate major in mathematics or satisfactory completion of course work in mathematics appropriate to the applicant’s program of study and approved by an Admissions Committee of the Mathematics Education Faculty Group, with the expectation of completing additional mathematics study if necessary. In such cases, the guidance committee will help the candidate design a program that includes appropriate course work in mathematics. Applicants with deficiencies in academic preparation may be admitted provisionally. These collateral courses will not count toward the degree. In addition, K-12 teaching experience is strongly encouraged, but not required. The Graduate Record Examination (GRE) General Test is required of all applicants.

Students will be admitted to the program by an Admissions Committee composed of members of the Mathematics Education Faculty Group, with the provision that a minimum of two faculty members must state that they are willing to serve as the student’s advisor. All admitted students will be assigned an academic advisor.

Candidates will apply directly to the Mathematics Education Graduate Program, and must have three letters of recommendation sent to the Director of the Mathematics Education Graduate Program.

Requirements for the Master of Science Degree in Mathematics Education

The student must complete a minimum of 35 credits for the degree under Plan A (with thesis). The student’s program of study must be approved by the student’s academic advisor and must include:

1. Both of the following courses: ............................................. 6
   MTHE 926 Proseminar in Mathematics Education I ............... 3
   MTHE 927 Proseminar in Mathematics Education II ............. 3

2. Two of the following courses: ......................................... 6
   CEP 913 Psychology and Pedagogy of Mathematics .......... 3
   MTHE 997 Special Topics in Mathematics Education ........... 3
   TE 950 Mathematical Ways of Knowing .......................... 3

3. One of the following courses: ......................................... 3
   MTHE 840 Critical Content of School Mathematics: Numbers and Operations ........................................ 3
   MTHE 841 Critical Content of School Mathematics: Algebra .... 3
   MTHE 842 Critical Content of School Mathematics: Geometry .. 3

4. One of the following courses: ................................. 2 or 3
   MTHE 879 Teaching College Mathematics ....................... 3
   TE 994 Laboratory and Field Experience in Curriculum, Instruction, and Teacher Education ..................... 2

5. The following course: .................................................. 3
   MTHE 954 Design and Methods in Mathematics Education Research .................................................. 3

6. One of the following courses: ......................................... 3
   CEP 931 Introduction to Qualitative Methods in Educational Research .................................................. 3
   CEP 932 Quantitative Methods in Educational Research I .... 3
   CEP 933 Quantitative Methods in Educational Research II .... 3
   CEP 934 Multivariate Data Analysis I ............................... 4
   CEP 935 Advanced Topics in Multivariate Data Analysis II .... 4
   STT 430 Introduction to Probability and Statistics ........... 3
   STT 441 Probability and Statistics I: Probability ............ 3
   STT 442 Probability and Statistics II: Statistics .......... 3
   STT 801 Design of Experiments ...................................... 3
   STT 825 Sample Surveys ............................................... 3
   STT 843 Multivariate Analysis ....................................... 3
   STT 861 Theory of Probability and Statistics I ............... 3
   STT 862 Theory of Probability and Statistics II .......... 3

7. One 3-credit course in general education foundations, policy, or learning and development, selected from a list of approved courses available from the student’s academic advisor.

8. Nine credits in the Department of Mathematics at a level appropriate to the student’s program of study and career goals at the 400-level or above, excluding Mathematics 424 and 443.

9. At least 4 credits of SME 899 Master’s Thesis Research and completion of a research thesis prior to taking the program’s comprehensive examination, which includes an oral defense of the research thesis and a written component administered by program faculty.

Doctor of Philosophy

The Doctor of Philosophy degree in Mathematics Education is designed for persons who show promise of becoming leaders in local, state, national, and international mathematics education communities. The program prepares researchers and leaders to address critical issues in mathematics education by developing analytical perspectives for research, engaging in reflective teaching, and deepening mathematical knowledge.

Students who may be interested in the program include the following: (1) graduates of undergraduate mathematics or mathematics education programs with interests in research and academic careers; and (2) K-12 teachers, intending to return to the classroom or to leadership in schools and districts, who desire strong, research-oriented knowledge and experience in mathematics education.

Students will have opportunities to acquire an understanding and experience in various aspects of the mathematics education field including investigation of mathematical learning and teaching, the development of instructional materials, participation in policy formation, development and use of assessment, and the integration of technology into mathematics learning and teaching. Students will address issues of research ethics in the Proseminar in Mathematics Education.

A career at any level in mathematics education requires substantive knowledge of the core discipline of mathematics. Each student will plan with his or her guidance committee a set of courses in mathematics that, together with the student’s prior
course work and teaching experiences, are appropriate for the student’s career plans.

In addition to meeting the requirements of the university and of the College of Natural Science, students must meet the requirements specified below.

**Admission**

The program admits students with a variety of backgrounds. Some students will have equally strong backgrounds in education and mathematics. Others may have more extensive prior preparation in one of these two disciplines. Candidates should have the equivalent of an undergraduate major in mathematics or satisfactory completion of course work in mathematics appropriate to the applicant’s program of study and approved by the Admissions Committee, with the expectation of completing additional mathematics study if necessary. In such cases, the guidance committee will help the candidate to design a program that includes appropriate course work in mathematics. Applicants with deficiencies in academic preparation may be admitted provisionally. These collateral courses will not count toward the degree. In addition, K-12 teaching experience is strongly encouraged, but not required. The Graduate Record Examination (GRE) General Test is required of all applicants.

Admissions decisions will be made by an Admissions Committee composed of members of the Mathematics Education Faculty Group. A student who shows promise for success at doctoral study but who needs additional background to be eligible for admission to the Ph.D. program will be provided with specific conditions to be met before admission. Upon successful completion of these requirements, the student may reapply.

**Requirements for the Doctor of Philosophy Degree in Mathematics Education**

The student must complete the requirements listed below. The student’s program of study must be approved by the student’s academic advisor and must include:

- Both of the following courses (6 credits):
  - MTHE 926 Proseminar in Mathematics Education I ................. 3
  - MTHE 927 Proseminar in Mathematics Education II ................ 3
- Two of the following courses (6 credits):
  - CEP 913 Psychology and Pedagogy of Mathematics .................. 3
  - MTHE 997 Special Topics in Mathematics Education ................... 3
  - TE 950 Mathematical Ways of Knowing .................................. 3
- One of the following courses (3 credits):
  - MTHE 840 Critical Content of School Mathematics: Numbers and Operations .................................. 3
  - MTHE 841 Critical Content of School Mathematics: Algebra .......... 3
  - MTHE 842 Critical Content of School Mathematics: Geometry .......... 3
- One of the following courses (2 or 3 credits):
  - MTHE 879 Teaching College Mathematics .................................. 3
  - TE 994 Laboratory and Field Experience in Curriculum, Instruction, and Teacher Education ..................... 2
- The following course (3 credits):
  - MTHE 954 Design and Methods in Mathematics Education Research .................................. 3
- Two of the following courses (6 credits):
  - CEP 931 Introduction to Qualitative Methods in Educational Research .................. 3
  - CEP 932 Quantitative Methods in Educational Research .................. 3
  - CEP 933 Quantitative Methods in Educational Research II ............ 3
  - EAD 955B Field Research Methods in Educational Administration .......... 3
  - STT 801 Design of Experiments ........................................... 3
  - STT 825 Sample Surveys ................................................... 3
  - STT 843 Multivariate Analysis ............................................. 3
- One 3-credit course in general education foundations, policy, teacher education, or learning and development, selected from a list of approved courses available from the student’s guidance committee.
- Twelve credits in the Department of Mathematics at a level appropriate to the student’s program of study and career goals at the 400-level or above, excluding Mathematics 424 and 443.
- Nine credits in a cognate selected in consultation with the guidance committee. The cognate must be at least three courses appropriate to the student’s program of study.
- Successful completion of comprehensive written examinations administered by program faculty.
- Successful defense of the dissertation.

The Center for Integrative Studies is Michigan State University’s unique approach to liberal general education, offering a core curriculum that complements specialized work by students in their majors. Integrative Studies courses integrate multiple ways of knowing and modes of inquiry and introduce students to important ways of thinking in the three core knowledge areas: the Arts and Humanities, the Biological and Physical Sciences, and the Social, Behavioral, and Economic Sciences. They assist students early during their study to develop as more critical thinkers. They also encourage appreciation of our humanity and creativity, human cultural diversity, the power of knowledge, and our responsibilities for ourselves and for our world.

Courses in Michigan State University’s Integrative Studies Program are aimed at developing intellectual abilities, including critical thinking and interpretive skills. They help increase knowledge about other times, places, and cultures, key ideas and issues in human experience, and the scientific method and its usefulness in understanding the natural and social worlds. They are expected to enhance appreciation of the role of knowledge, and of values and ethics, in understanding human behavior and solving social problems. Finally, they help students recognize responsibilities and opportunities associated with democratic citizenship and with living in an increasingly interconnected, interdependent world.

The Center for Integrative Studies in the Arts and Humanities in the College of Arts and Letters has primary responsibility for the Arts and Humanities area of Integrative Studies at Michigan State University.

The Center for Integrative Studies in General Sciences in the College of Natural Sciences has primary responsibility for Integrative Studies courses in the Biological and Physical Sciences at Michigan State University.

The Center for Integrative Studies in the Social Sciences in the College of Social Science has primary responsibility for Integrative Studies courses in the Social, Behavioral, and Economic Sciences at Michigan State University.

**INTERDEPARTMENTAL DEGREE PROGRAMS**

The College of Natural Science offers interdepartmental degree programs in biological science—interdepartmental; cell and molecular biology; earth science—interdepartmental; ecology, evolutionary biology and behavior; general science; genetics—environmental toxicology; human biology; neuroscience; and physical science—interdepartmental. These programs are designed to serve students who wish to develop a broad background in the natural sciences. Students who desire academic preparation in the natural sciences with emphasis in a single discipline should enroll in a departmental major. The interdepartmental programs are not intended for this purpose.

Students interested in elementary education who wish to major in science should reference the section on MSU SUBJECT MAT-
TER TEACHING MAJORS AND MINORS FOR TEACHER PREPARATION AND CERTIFICATION in the Department of Teacher Education section of this catalog.

BIOLOGICAL SCIENCE—INTERDEPARTMENTAL

UNDERGRADUATE PROGRAM

The biological science–interdepartmental major, which leads to the Bachelor of Science degree, is designed for persons who want a broad background in fields that comprise biological sciences and who want to understand the interrelationships among such fields. This major is designed primarily for persons who plan to teach biological sciences in middle and secondary schools.

Requirements for the Bachelor of Science Degree in Biological Science—Interdepartmental

1. The University requirements for bachelor’s degrees as described in the Undergraduate Education section of this catalog; 120 credits, including general elective credits, are required for the Bachelor of Science degree in Biological Science—Interdepartmental.
   The University’s Tier II writing requirement for the Biological Sciences—Interdepartmental major is met by completing NSG 401. That course is referenced in item 3.a. below.
   Students who are enrolled in the College of Natural Science may complete the alternative track to Integrative Studies in Biological and Physical Sciences that is described in item 1. under the heading Graduation Requirements in the College statement. Certain courses referenced in requirement 3. below may be used to satisfy the alternative track.

2. The requirements of the College of Natural Science for the Bachelor of Science degree is available for teacher certification.
   The credits earned in certain courses referenced in requirement 3. below may be counted toward College requirements as appropriate.

3. The following requirements for the major:

   a. All of the following courses: ................................................. 30
      CEM 251 Organic Chemistry I ........................................ 3
      CEM 252 Organic Chemistry II .......................................... 3
      CEM 255 Organic Chemistry Laboratory ............................. 2
      CEM 262 Quantitative Analysis ......................................... 3
      PSL 250 Introductory Physiology ....................................... 4
      SME 401 Science Laboratories for Secondary Schools (W) .... 4
      ZOL 341 Fundamental Genetics .......................................... 4
      ZOL 355 Ecology .............................................................. 3
      ZOL 355L Ecology Laboratory (W) ................................... 1
      ZOL 445 Evolution (W) ..................................................... 3

   b. One of the following groups of courses (9 or 10 credits):
      (1) BS 161 Cell and Molecular Biology ............................... 3
      BS 162 Organismal and Population Biology ....................... 3
      BS 171 Cell and Molecular Biology Laboratory .................. 2
      BS 172 Organismal and Population Biology Laboratory ....... 2
      (2) BS 181H Honors Cell and Molecular Biology ................. 3
      BS 182H Honors Organismal and Population Biology ............ 3
      BS 191H Honors Cell and Molecular Biology Laboratory ..... 2
      BS 192H Honors Organismal and Population Biology Laboratory 2
      (3) LB 144 Biology I: Organismal Biology ......................... 4
      LB 145 Biology II: Cellular and Molecular Biology ............. 5

   c. One of the following groups of courses: ............................ 9 to 12
      (1) CEM 141 General Chemistry ........................................ 4
      CEM 142 General and Inorganic Chemistry ......................... 4
      CEM 161 Chemistry Laboratory ......................................... 1
      CEM 162 Chemistry Laboratory II .................................... 1
      CEM 151 General and Descriptive Chemistry ...................... 4
      CEM 152 Principles of Chemistry .................................... 3
      CEM 163 Chemistry Laboratory I ..................................... 1
      CEM 162 Chemistry Laboratory II .................................... 1
      (2) CEM 181H Honors Chemistry I ................................... 4
      CEM 182H Honors Chemistry II ....................................... 4
      CEM 183H Honors Chemistry Laboratory I ........................ 2
      CEM 186H Honors Chemistry Laboratory II ........................ 2

   d. One of the following pairs of courses: ............................. 6 or 7
      (1) MTH 132 Calculus I .................................................. 3
      MTH 133 Calculus II .................................................... 4
      (2) MTH 132 Calculus I .................................................. 3
      STT 201 Statistical Methods ........................................... 4
      (3) MTH 124 Survey of Calculus I .................................... 3
      MTH 126 Survey of Calculus II ....................................... 3
      (4) MTH 124 Survey of Calculus I .................................... 3
      STT 201 Statistical Methods ........................................... 4
      (5) MTH 152H Honors Calculus I ..................................... 3
      MTH 153H Honors Calculus II ......................................... 3

   e. One of the following pairs of courses: ............................. 6 or 8
      (1) PHY 183 Physics for Scientists and Engineers I ............. 4
      PHY 184 Physics for Scientists and Engineers II ............... 4
      (2) PHY 183H Honors Physics I–Mechanics ......................... 3
      PHY 294H Honors Physics II–Electromagnetism ................. 3
      (3) PHY 231 Introductory Physics I .................................. 3
      PHY 232 Introductory Physics II .................................... 3

   f. One of the following pairs of courses: ............................. 2
      (1) PHY 191 Physics Laboratory for Scientists, I .............. 1
      PHY 192 Physics Laboratory for Scientists, II ................. 1
      (2) PHY 251 Introductory Physics Laboratory I ................. 1
      PHY 252 Introductory Physics Laboratory II ..................... 1

   g. One of the following, either (1) or (2): ............................ 8
      (1) BMB 401 Comprehensive Biochemistry ....................... 4
      ZOL 408 Histology ....................................................... 4
      ZOL 425 Cells and Development (W) ............................... 4
      (2) Both of the following courses:
         MMG 301 Introductory Microbiology ................................ 3
         MMG 302 Introductory Laboratory for General and Allied Health Microbiology 1
         One of the following courses:
         BMB 401 Comprehensive Biochemistry ....................... 4
         ZOL 408 Histology ....................................................... 4
         ZOL 425 Cells and Development (W) ............................... 4

   h. One of the following courses: ....................................... 3 or 4
      PLB 301 Introductory Plant Physiology ........................... 3
      PLB 418 Plant Systematics ............................................ 3
      PLB 434 Plant Structure and Function ............................. 4
      PLP 405 Plant Pathology .............................................. 3

TEACHER CERTIFICATION OPTIONS

The biological science—interdepartmental disciplinary major leading to the Bachelor of Science degree is available for teacher certification.

A biological science disciplinary minor is also available for secondary teacher certification.

Students who elect the biological science—interdepartmental disciplinary major or the biological science disciplinary minor must contact the College of Natural Science.

For additional information, refer to the statement on TEACHER CERTIFICATION in the Department of Teacher Education section of this catalog.

GRADUATE STUDY

Master of Science

The Master of Science degree program with a major in Biological Science—Interdepartmental is designed for science teachers who wish to pursue graduate study in the biological sciences. To meet the needs of practicing teachers, the courses that are required for the program are offered in the summer and on weekends.

In addition to meeting the requirements of the university and of the College of Natural Science, students must meet the requirements specified below.

Admission

Requirements for admission to the master’s degree program in biological science—interdepartmental include a bachelor’s degree in biology, teacher certification for grades 7–12, at least 1 year of teaching experience, and current employment as a teacher of biology or related disciplines at the middle or secondary school level.
Requirements for the Master of Science Degree in Biological Science—Interdepartmental

The program is available under either Plan A (with thesis) or Plan B (without thesis). For a student under Plan A, a thesis committee that consists of the student's faculty advisor, the student's program director, and one other faculty member must approve the student's program of study. The student must complete at least 30 credits distributed as follows:

Requirements for Both Plan A and Plan B
1. All of the following courses (20 credits):
   - SME 871 Biochemistry and Cell Biology for Teachers ............... 7
   - SME 874 Field Ecology for Teachers ................................... 7
   - SME 801 Frontiers in Biological Sciences .............................. 6

Additional Requirements for Plan A
1. SME 899 Master's Thesis Research ................................... 10
   Research for the thesis involves developing laboratories and demonstrations as part of a new teaching unit and teaching that unit, collecting and analyzing relevant data.

Additional Requirements for Plan B
1. SME 899 Research for Inservice Teachers .......................... 10
   Research for inservice teachers requires a curriculum-based project and implementation report.

CELL AND MOLECULAR BIOLOGY

GRADUATE STUDY

Master of Science

This program provides theoretical and practical training in cell and molecular biology to prepare students for a variety of professional positions in academia, industry, or government.

Admission

Most students enter the Master of Science degree program in cell and molecular biology with the goal of eventually obtaining a Ph.D. degree. However, students with limited research experience or specific deficiencies in their undergraduate training may be admitted to this program to obtain additional experience. Applicants will be considered by the Cell and Molecular Biology admissions committee, and in general the criteria for admission are similar to those of the Ph.D. program (an undergraduate major in biology, it is recommended that an applicant have:

1. Completed a Bachelor of Science or Bachelor of Arts degree with a minimum grade–point average of 3.00.
2. A broad background in biology, including courses in biochemistry, genetics, cell biology, and molecular biology.
3. Completed at least one year of study in each of the following fields: physics, inorganic chemistry, organic chemistry, and mathematics through integral calculus.
4. A grade of 3.0 or above in each science and mathematics course completed.
5. Acceptable scores on the Graduate Record Examination General Test.
6. Successfully complete a minimum of two additional graduate courses at a minimum of 3 credits each that are related to the student's research.
7. Complete a 10–week research rotation in the laboratory of each of three different members of the cell and molecular biology faculty during the first year of enrollment in the program.
8. Pass the preliminary examination given at the end of the second year of graduate study.
9. Successfully complete a minimum of two semesters as a teaching assistant in a department represented on the cell and molecular biology faculty. The student's teaching assignment must be approved by the director of the doctoral program in cell and molecular biology.

For additional information, contact the director of the doctoral program in cell and molecular biology, 153 Giltner Hall, Michigan State University, East Lansing, MI 48824.

Requirements for the Doctor of Philosophy Degree in Cell and Molecular Biology

The student must:

1. Complete all of the following courses (15 credits):
   - BMB 801 Molecular Biology and Protein Structure .................. 4
   - BMB 825 Cell Structure and Function .................................. 3
   - CMB 800 Cell and Molecular Biology Seminar ..................... 3
   - CMB 892 Research Forum .................................................... 4
   - One graduate course in scientific ethics ................................ 1
2. Complete one of the following courses (3 credits):
   - MMG 833 Microbial Genetics .............................................. 3
   - MMG 835 Eukaryotic Molecular Genetics ............................ 3
3. Complete a minimum of two additional graduate courses at a minimum of 3 credits each that are related to the student's research.
4. Complete a 10–week research rotation in the laboratory of each of three different members of the cell and molecular biology faculty during the first year of enrollment in the program.
5. Pass the preliminary examination given at the end of the second year of graduate study.
6. Successfully complete a minimum of two semesters as a teaching assistant in a department represented on the cell and molecular biology faculty. The student's teaching assignment must be approved by the director of the doctoral program in cell and molecular biology.
EARTH SCIENCE—INTERDEPARTMENTAL

UNDERGRADUATE PROGRAM

The Department of Geological Sciences administers the earth science—interdepartmental major, which leads to the Bachelor of Science degree. The major is designed for persons who want a broad background in geology, meteorology, oceanography, and astronomy and who want to understand the interrelationships among these fields. The general earth science concentration is designed primarily for persons who plan to teach earth science in middle and secondary schools. The meteorology/atmospheric sciences concentration is designed primarily for persons who plan to enter a graduate program in meteorology/atmospheric sciences.

Requirements for the Bachelor of Science Degree in Earth Science—Interdepartmental

1. The University requirements for bachelor's degrees as described in the Undergraduate Education section of this catalog; 120 credits, including general elective credits, are required for the Bachelor of Science degree in Earth Science—Interdepartmental.

   The University's Tier II writing requirement for the Earth Science—Interdepartmental major is met by completing Geological Sciences 401 for the General Earth Science concentration and Geography 403 for the Meteorology/Atmospheric Sciences concentration. Those courses are referenced in item 3. c. below.

   Students who are enrolled in the College of Natural Science may complete the alternative to Integrative Studies in Biological and Physical Sciences that is described in item 1. under the heading Teacher Certification Options.

2. The requirements of the College of Natural Science for the Bachelor of Science degree.

   The credits earned in certain courses referenced in requirement 3. below may be counted toward College requirements as appropriate.

3. The following requirements for the major:

   a. All of the following courses:.........................21
      CREDITS
      AST 207 The Science of Astronomy ......................3
      GEO 203 Introduction to Meteorology .....................3
      GLG 201 The Dynamic Earth .............................4
      GLG 303 Oceanography ....................................4
      GLG 304 Physical and Biological History of the Earth ....4
      MTH 132 Calculus I ....................................3

   b. One of the following groups of courses: .................8
      (1) CEM 141 General Chemistry ..........................4
          CEM 142 General and Inorganic Chemistry .............4
          CEM 161 Chemistry Laboratory I .........................1
      (2) CEM 151 General and Descriptive Chemistry ..........4
          CEM 152 Principles of Chemistry ........................3
          CEM 161 Chemistry Laboratory I .........................1

   c. One of the following concentrations: ..................28 to 38
      (1) Both of the following courses:......................4
          GLG 321 Mineralogy and Geochemistry ..................4
          GLG 401 Plate Tectonics ................................4
      (2) One of the following courses:......................4
          MTH 133 Calculus II ..................................4
          STT 200 Statistical Methods .............................4
          STT 201 Statistical Methods .............................4
          STT 231 Statistics for Scientists .......................3

   (3) One of the following groups of courses:
      (a) PHY 231 Introductory Physics I .....................3
          PHY 232 Introductory Physics II .......................3

TEACHER CERTIFICATION OPTIONS

The earth science—interdepartmental disciplinary major leading to the Bachelor of Science degree is available for teacher certification.

An earth science disciplinary minor is also available for secondary teacher certification.

Students who elect the earth science–interdepartmental disciplinary major or the earth science disciplinary minor must contact the Department of Geological Sciences.

For additional information, refer to the statement on Teacher Certification in the Department of Teacher Education section of this catalog.

ECOLOGY, EVOLUTIONARY BIOLOGY AND BEHAVIOR

GRADUATE STUDY

Dual Major

The interdepartmental dual major in ecology, evolutionary biology and behavior is administered by the College of Natural Science. The dual major is available only to those students who plan to complete a Ph.D. degree program that involves ecology, evolutionary biology and behavior and a major in one of the following departments that are affiliated with the interdepartmental program: Anthropology, Computer Science and Engineering, Crop and Soil Sciences, Entomology, Fisheries and Wildlife, Forestry, Geography, Geological Sciences, Horticulture, Microbiology and Molecular Genetics, Philosophy, Plant Biology, Plant Pathology, Psychology, Statistics and Probability, and Zoology. The student
does not have the option of completing a dual major in ecology, evolutionary biology and behavior alone.

The educational objectives of the interdepartmental program are to:
1. provide an opportunity for doctoral students to obtain a comprehensive and contemporary academic experience in the field of ecology, evolutionary biology and behavior.
2. stimulate doctoral students with an interest in ecology, evolutionary biology and behavior to become sensitive to their professional obligations and responsibilities.
3. develop an intellectual environment which will foster the growth of research and teaching in the area of ecology, evolutionary biology and behavior.

Students who are enrolled in the dual major in Ecology, Evolutionary Biology and Behavior may elect an Interdepartmental Specialization in Cognitive Science. For additional information, refer to the statement on Interdepartmental Graduate Specializations in Cognitive Science in the College of Social Science section of this catalog. For additional information, contact the College of Natural Science.

In addition to meeting the requirements of the university and of the College of Natural Science, students must meet the requirements specified below.

Admission
In order to enroll in the dual major in ecology, evolutionary biology and behavior a student must also have been admitted to a major in one of the affiliated departments. A minimum undergraduate grade-point average of 3.0 and undergraduate mathematics through calculus are required for admission to the dual major.

The Graduate Admissions Committee, composed of members of the ecology, evolutionary biology and behavior faculty from affiliated departments, reviews applications for admission and recommends acceptance of applicants for admission. In special cases an applicant who has deficiencies in background courses may be admitted to the dual major on a provisional basis.

Guidance Committee
During the first year of enrollment in the dual major, the student and a member of the ecology, evolutionary biology and behavior faculty who will serve as the student’s major professor will constitute a guidance committee that will assist in planning the student’s program of study. At least two members of the ecology, evolutionary biology and behavior faculty shall be members of the committee. The student’s program of study will involve ecology, evolutionary biology and behavior and a major in one of the affiliated departments. The program shall be planned in accordance with the statement on Dual Major Doctoral Degrees in the Graduate Education section of this catalog.

Students in the dual major in ecology, evolutionary biology and behavior are expected to attend weekly seminars and to participate in the graduate student-organized research colloquium.

Requirements for the Dual Major in Ecology, Evolutionary Biology and Behavior
1. One 3-credit course in ecology at the 800-900 level from one of the departments that is affiliated with the dual major in ecology, evolutionary biology and behavior. A list of approved courses is available from the office of the ecology, evolutionary biology and behavior program.
2. One 3-credit course in the 800-900 level from one of the departments that is affiliated with the dual major in ecology, evolutionary biology and behavior. A list of approved courses is available from the office of the ecology, evolutionary biology and behavior program.
3. One 3-credit course in quantitative methods at the 800-900 level from one of the departments that is affiliated with the dual major in ecology, evolutionary biology and behavior. A list of approved courses is available from the office of the ecology, evolutionary biology and behavior program.
4. Twenty-four credits in Doctoral Dissertation Research (course number 999) from one of the departments referenced above.
5. Pass a comprehensive examination that will be defined by the requirements of the participating department and that will include a written examination in which the student demonstrates a knowledge of ecology, evolutionary biology and behavior as determined by the guidance committee.
6. Submit a dissertation that, in the judgment of the student’s guidance committee, represents the integration of ecology, evolutionary biology and behavior and the student’s departmental major.

GENERAL SCIENCE

GRADUATE STUDY

Master of Arts for Teachers
The Master of Arts for Teachers degree program with a major in general science is designed for elementary and middle school teachers who wish to pursue graduate study in the broad area of teaching science. To meet the needs of practicing teachers, the courses that are required for the program are offered in the summer, and after school hours.

In addition to meeting the requirements of the university and of the College of Natural Science, students must meet the requirements specified below.

Requirements for the Master of Arts for Teachers Degree in General Science
The program is available only under Plan B (without thesis). A total of 30 credits is required for the degree. The student’s program of study must be approved by the student’s academic advisor. The student must meet the requirements specified below.

1. All of the following courses (21 credits):
   - SME 828 Physical Science I ................................................. 3
   - SME 829 Physical Science II ............................................... 3
   - SME 832 Earth Science I .................................................. 3
   - SME 833 Earth Science II ............................................... 3
   - SME 836 Life Science I ................................................... 3
   - SME 839 Life Science II .................................................. 3
   - SME 889 Research for Inservice Teachers .......................... 3

   An approved school-based project that involves either developing new science instruction or a project that is designed to transform science teaching in the student’s school is required for Science and Mathematics Education 889.

2. One of the following courses (3 credits):
   - TE 860 Practice and Inquiry in Science Education ............. 3
   - TE 861A Teaching Science for Understanding .................... 3

3. Six credits of approved electives including at least one course from the Department of Teacher Education.
GENETICS

GRADUATE STUDY

Master of Science

The primary purpose of the Master of Science in Genetics is to train students for a variety of careers in areas of genetics and genomics. The program also seeks to provide graduate students who are seeking the Ph.D. degree, state-of-the-art knowledge and skills to prepare them for careers in research and teaching.

Admission

Applicants will be considered for admission by the Genetics Admissions Committee. The criteria for admission include an undergraduate major in the biological sciences, acceptable grade-point average and GRE scores, a statement of objectives and three letters of recommendation. The Genetics Admissions Committee will also consider requests for students to transfer from the Doctor of Philosophy in Genetics to this program.

In addition to meeting the requirements of the university and the College of Natural Science, students must meet the requirements specified below.

Requirements for the Master of Science Degree in Genetics

All students in the Master of Science in Genetics must earn at least 30 credits, of which a minimum of 20 credits must consist of course work and must include the core courses specified for the Ph.D. program. Detailed course work and other requirements are specified in the Student Handbook of the Genetics Program. For a Plan A (with thesis) degree, students must complete 4 to 10 credits of Genetics 899, Master’s Thesis Research, submit a written thesis, present a final research seminar and pass a final oral examination. For a Plan B (without thesis) degree, students must have earned at least 26 credits through course work, may receive a maximum of 4 credits for work completed in Genetics 899, Master’s Thesis Research, submit a final report and pass an oral examination.

Doctor of Philosophy

The interdepartmental Doctor of Philosophy degree program with a major in genetics is administered by the College of Natural Science. The objectives of the program are (1) to prepare the student for independent research and teaching, (2) to help the student to understand the nature and significance of genetics as a whole and to gain strength in related sciences, such as molecular biology and biochemistry, and (3) to enable the student to keep in the forefront of this continuously changing field.

Students may specialize in one area of genetics, but are required to familiarize themselves with all major areas of the discipline. Students may elect to complete the requirements for a second major, such as biochemistry, in addition to the requirements for the doctoral degree in genetics.

In addition to meeting the requirements of the university and of the College of Natural Science, students must meet the requirements specified below.

Admission

For regular admission a student must have a bachelor’s degree with a grade–point average of 3.30, appropriate background in the biological and physical sciences, and approval of the Genetics Program Admissions Committee. In special cases an applicant who fails to meet the grade–point average requirement, or who has deficiencies in background courses, i.e., organic chemistry, physics, calculus, or biology, may be admitted on a provisional basis. Applicants admitted on a provisional basis must remove these deficiencies within one year of admission to the genetics program.

Requirements for the Doctor of Philosophy Degree in Genetics

The program of study is planned by the student in consultation with the major professor and a guidance committee. Specific courses in genetics, as well as courses in other areas considered relevant to the student’s interests and chosen research area, are included in the program. Students in the program will write and defend a research dissertation which shows original treatment of an important research problem. A detailed description of the genetics program and of the research interests of the genetics faculty may be obtained by writing the Director of the Genetics Program, Michigan State University, S–352 Plant Biology Building, East Lansing, MI 48824.

GENETICS—ENVIRONMENTAL TOXICOLOGY

Doctor of Philosophy

For information about the Doctor of Philosophy degree program in genetics—environmental toxicology, refer to the statement on Doctoral Program in Environmental and Integrative Toxicological Sciences in the Graduate Education section of this catalog.

HUMAN BIOLOGY

UNDERGRADUATE PROGRAM

The human biology major, which leads to the Bachelor of Science degree, is designed for persons who want a broad background in fields that comprise biological sciences and who want to understand the interrelationships among such fields. This program is for persons who plan to pursue careers in the health care professions and for students who are interested in the biological sciences, but are not interested in a teaching option.

Requirements for the Bachelor of Science Degree in Human Biology

1. The University requirements for bachelor’s degrees as described in the Undergraduate Education section of this catalog. 120 credits, including general elective credits, are required for the Bachelor of Science degree in Human Biology.

   The University’s Tier II writing requirement for the Human Biology major is met by completing NSC 495. That course is referenced in item 3. a. below.

   Students who are enrolled in the College of Natural Science may complete the alternative track to Integrative Studies in Biological and Physical Sciences that is described in item 1. under the heading Graduation Requirements in the College statement. Certain courses referenced in requirement 3. below may be used to satisfy the alternative track.

2. The requirements of the College of Natural Science for the Bachelor of Science degree.

   The credits earned in certain courses referenced in requirement 3. below may be counted toward College requirements as appropriate.

3. The following requirements for the major:

   a. All of the following courses: .............................................. 24
   BS  161 Cell and Molecular Biology ........................................... 3
   BS  162 Organismal and Population Biology ............................ 3
   BS  171 Cell and Molecular Biology Laboratory ........................ 2
   BS  172 Organismal and Population Biology Laboratory ............ 2
   CEM 251 Organic Chemistry I .................................................. 3
   CEM 252 Organic Chemistry II ................................................. 3
   CEM 255 Organic Chemistry Laboratory .................................... 2
NEUROSCIENCE

Several colleges and departments within Michigan State University cooperate in offering the interdepartmental Master of Science and Doctor of Philosophy degree program with a major in neuroscience, which is administered by the College of Natural Science. Students may elect to complete the requirements for a second major, in addition to the requirements for the Master of Science and Doctor of Philosophy degree in neuroscience.

Students who are enrolled in the master's or doctoral degree program with a major in Neuroscience may also elect an Interdepartmental Specialization in Cognitive Science. For additional information, refer to the statement on Interdepartmental Graduate Specializations in Cognitive Science in the College of Social Science section of this catalog. For additional information, contact the College of Natural Science.

Master of Science

The major objective of the M.S. program is to provide sufficient theoretical and practical training in neuroscience to allow students to obtain professional level positions in academic, industrial, or governmental institutions.

Admission

Admission to graduate study in neuroscience is primarily to the doctoral program. Students are generally accepted for graduate study in neuroscience only if judged by a program committee to be qualified to complete the doctoral degree. However, under certain circumstances, the program may consider applications for admission to the Master of Science in Neuroscience from students who wish to earn a master's degree in preparation for the doctoral degree. For consultation, contact the program director.

To be considered for admission to the Master of Science degree in Neuroscience an applicant should:

1. have taken a broad spectrum of basic science courses.
2. have a grade-point average of at least 3.0 in science and mathematics courses.
3. have completed an undergraduate degree in a biological or physical science or a related discipline.
4. have earned an overall grade-point average of 3.0.
5. have the results of the Graduate Record Examination (GRE). General Test forwarded to the College of Natural Science.

Laboratory research experience is recommended, but not required. Applicants with deficiencies in academic preparation may be admitted provisionally, with the requirement that they complete collateral science courses during the first year of study; these collateral courses will not count toward the degree.

Admission decisions are made by the Neuroscience Program Graduate Affairs Committee.

In addition to meeting the requirements of the university and the College of Natural Science, students must meet the requirements specified below.
**Requirements for the Master of Science Degree in Neuroscience**

The program is available under either Plan A (with thesis) or Plan B (without thesis). A total of 30 credits is required for the degree under either Plan A or Plan B. The student’s program of study must be approved by the student’s guidance committee. The student must meet the requirements specified below:

**Requirements for Plan A and Plan B**

1. Complete all of the following courses (17 credits):
   - NEU 804 Molecular and Developmental Neurobiology ........... 3
   - NEU 806 Advanced Neuroscience Techniques Laboratory .......... 3
   - NEU 839 Systems Neuroscience .................................... 4
   - PHM 827 Physiology and Pharmacology of Excitable Cells ......... 4
   - PSY 811 Advanced Behavioral Neuroscience ..................... 3

2. Complete one of the following courses (3 credits):
   - PHM 830 Experimental Design and Data Analysis ............... 3
   - PSY 815 Quantitative Research Design and Analysis in Psychology .......................... 3

3. Complete a minimum of 6 credits in Neuroscience 800 or 899. Plan A students must complete 4 credits of Neuroscience 899.

4. Complete an additional 4 credits of elective courses related to the student’s research and approved by the student’s guidance committee. These credits may be earned in Neuroscience 800 or 899 if the student chooses.

5. Complete a one semester laboratory rotation with each of two neuroscience faculty in the first year of study. Students will select the two laboratories in which they will rotate at the beginning of fall semester based on discussions and mutual agreement with neuroscience faculty members.

**Additional Requirements for Plan A**

Successful completion and defense of a thesis based on original research on an important problem in neuroscience in a seminar-based public forum.

**Additional Requirements for Plan B**

Successful completion and presentation of a research-based paper.

**Doctor of Philosophy**

The program provides an opportunity for doctoral students to acquire both a broad and in-depth knowledge of the function of the nervous system. The program is designed to:

1. Make it possible for a doctoral student to obtain a comprehensive and contemporary academic experience in the field of neuroscience.
2. Prepare students for their future professional obligations and responsibilities as scholars.
3. Develop an intellectual environment that will foster the growth of research and teaching in the area of neuroscience.
   In addition to meeting the requirements of the university and of the College of Natural Science, students must meet the requirements specified below.

**Admission**

To be considered for admission to the Doctor of Philosophy degree program with a major in neuroscience, an applicant should have:

1. Completed a broad spectrum of basic science courses.
2. A grade-point average of at least 3.0 in science and mathematics courses.
3. Experience in laboratory research.

To be eligible for regular admission to the Doctor of Philosophy degree program with a major in neuroscience, an applicant must have:

1. Completed an undergraduate degree in a biological, psychological, or physical science or in a related discipline.
2. An overall grade-point average of at least 3.0.
3. Satisfactory scores on the Graduate Record Examination General Test as judged by the faculty.

Admission decisions are made by the Neuroscience Program Admissions Committee. Applicants with deficiencies in academic preparation may be admitted provisionally, with the requirement that they complete collateral science courses during the first year of study; these collateral courses will not count toward the degree.

**Requirements for the Doctor of Philosophy Degree in Neuroscience**

The student must:

1. Complete all of the following courses:
   - NEU 800 Neuroscience Research Forum ........................ 4
   - NEU 804 Molecular and Developmental Neurobiology ............ 3
   - NEU 806 Advanced Neuroscience Techniques Laboratory .......... 3
   - NEU 839 Systems Neuroscience .................................... 4
   - NEU 890 Independent Study in Neuroscience ....................... 4
   - NEU 999 Doctoral Dissertation Research ........................ 24
   - PHM 827 Advanced Neurobiology .................................. 4
   - PSY 811 Advanced Behavioral Neuroscience ..................... 3

2. Complete one of the following courses (3 credits):
   - PHM 830 Experimental Design and Data Analysis ............... 3
   - PSY 815 Quantitative Research Design and Analysis in Psychology .................................. 3

3. Complete in the first year of enrollment in the program a one-semester laboratory rotation (NEU 890) with each of two members of the faculty. Each rotation is established by mutual agreement of the faculty member and the student.

4. Pass the written comprehensive examination given at the end of the second year of enrollment in the program.

5. Complete and orally defend a dissertation research proposal.

6. Complete and defend a dissertation based on original research on an important problem in neuroscience.

7. All students must complete Responsible Conduct of Research Training.

The colleges and departments that are listed below cooperate in offering the interdepartmental Doctor of Philosophy degree program with a major in neuroscience:

**Colleges**

- Human Medicine
- Osteopathic Medicine
- Social Science
- Veterinary Medicine

**Departments**

- Anatomy (Division of)
- Biochemistry and Molecular Biology
- Pathobiology and Diagnostic Investigation
- Pharmacology and Toxicology
- Physiology
- Psychology
- Zoology

A detailed description of the Doctor of Philosophy degree program with a major in neuroscience and of the research interests of participating faculty may be obtained upon request from the Neuroscience Program Administrative Office, 108 Giltner Hall, Michigan State University, East Lansing, MI 48824-1317, or by visiting the Web site at [http://www.neuroscience.msu.edu](http://www.neuroscience.msu.edu).

**NEUROSCIENCE—ENVIRONMENTAL TOXICOLOGY**

**Doctor of Philosophy**

For information about the Doctor of Philosophy degree program in neuroscience—environmental toxicology, refer to the statement on Doctoral Program in Environmental and Integrative Toxicological Sciences in the Graduate Education section of this catalog.
PHYSICAL SCIENCE—INTERDEPARTMENTAL

UNDERGRADUATE PROGRAM
The physical science—interdepartmental major, which leads to the Bachelor of Science degree, is designed for persons who want a broad background in both physics and chemistry and to understand the interrelationships between these disciplines. This major is designed primarily for persons who plan to teach physics, chemistry and/or physical science in secondary schools.

Requirements for the Bachelor of Science Degree in Physical Science—Interdepartmental

1. The University requirements for bachelor’s degrees as described in the Undergraduate Education section of this catalog; 120 credits, including general elective credits, are required for the Bachelor of Science degree in Physical Science—Interdepartmental. The University’s Tier II writing requirement for the Physical Science—Interdepartmental major is met by completing Science and Mathematics Education 401. That course is referenced in item 3. a. below.

2. The requirements of the College of Natural Science for the Bachelor of Science degree. The credits earned in certain courses referenced in requirement 3. below may be counted toward College requirements as appropriate.

3. The following requirements for the major:
   a. One of the following courses (4 credits):
      - CEM 141 General Chemistry .................................. 4
      - CEM 151 General and Descriptive Chemistry ............ 4
   b. One of the following courses (3 credits):
      - CEM 142 General and Inorganic Chemistry ............... 3
      - CEM 152 Principles of Chemistry .......................... 3
   c. All of the following courses (57 credits):
      - CEM 161 Chemistry Laboratory I .......................... 1
      - CEM 162 Chemistry Laboratory II .......................... 1
      - CEM 251 Organic Chemistry I ............................. 3
      - CEM 252 Organic Chemistry II ............................. 3
      - CEM 255 Organic Chemistry Laboratory ................... 2
      - CEM 282 Quantitative Analysis ............................ 2
      - CEM 383 Introductory Physical Chemistry I .......... 3
      - MTH 132 Calculus I ........................................ 3
      - MTH 133 Calculus II ........................................ 3
      - MTH 234 Multivariable Calculus ........................... 4
      - MTH 235 Differential Equations ............................ 3
      - PHY 182 Physics for Scientists and Engineers I ........ 4
      - PHY 191 Physics Laboratory for Scientists, I .......... 1
      - PHY 192 Physics Laboratory for Scientists, II ........ 1
      - PHY 215 Thermodynamics and Modern Physics .......... 3
      - PHY 431 Optics I ........................................... 3
      - PHY 440 Electronics ........................................ 4
      - SME 401 Science Laboratories for Secondary Schools (W) 4
   d. One of the following courses (3 or 4 credits):
      - BS 161 Cell and Molecular Biology .......................... 3
      - ENT 205 Pests, Society and Environment ........................ 3
      - PLB 105 Plant Biology ......................................... 3
      - PSL 250 Introductory Physiology .......................... 4
      - ZOL 141 Introductory Human Genetics .................. 3

TEACHER CERTIFICATION OPTION
The physical science—interdepartmental disciplinary major leading to the Bachelor of Science degree is available for secondary teacher certification.

Students who elect the physical science—interdepartmental disciplinary major must contact the College of Natural Science. For additional information, refer to the statement on TEACHER CERTIFICATION in the Department of Teacher Education section of this catalog.

GRADUATE STUDY

Master of Science

The Master of Science degree program with a major in Physical Science—Interdepartmental is designed for science teachers who wish to pursue graduate study in the physical sciences. To meet the needs of practicing teachers, the courses that are required for the program are offered in the summer and on weekends.

In addition to meeting the requirements of the university and of the College of Natural Science, students must meet the requirements specified below.

Admission

Requirements for admission to the master’s degree program in physical science—interdepartmental include a bachelor’s degree in physics, chemistry, earth science, or physical science; teacher certification for grades 7–12; at least 3 years of teaching experience; and current employment as a teacher of physics, chemistry, earth science, or physical science at the middle or secondary school level.

Requirements for the Master of Science Degree in Physical Science—Interdepartmental

The program is available under either Plan A (with thesis) or Plan B (without thesis). For a student under Plan A, a thesis committee that consists of the student’s faculty advisor, the student’s problem director, and one other faculty member must approve the student’s program of study.

The student must complete at least 30 credits distributed as follows:

- Requirements for Both Plan A and Plan B
  1. All of the following courses (17 credits):
     - NSC 860 Problem Solving Techniques in Physical Science . . . . 3
     - NSC 861 Chemistry for Teachers ............................ 2
     - NSC 862 Physics for Teachers .............................. 2
     - NSC 863 Earth Science for Teachers ....................... 2
     - NSC 864 Interdisciplinary Seminar in Physical Science ..................... 2
     - NSC 902 Frontiers in Physical Science .................... 6
  2. Three additional credits in courses approved by the student’s graduate committee.

- Additional Requirements for Plan A
  1. NSC 899 Master’s Thesis Research ........................... 10
  Additional Requirements for Plan B
  1. NSC 889 Research for Inservice Teachers .................. 10

Research for inservice teachers requires a curriculum based project and implementation report.

QUANTITATIVE BIOLOGY

Dual Major

The interdepartmental dual major in quantitative biology is administered by the College of Natural Science. The dual major is available only to those students who plan to complete a Ph.D. degree program that involves a research project and course work in quantitative biology and a major in one of the following: departments that are affiliated with the interdepartmental program: Biochemistry and Molecular Biology, Cell and Molecular Biology, Chemical Engineering and Materials Science, Chemistry, Civil and Environmental Engineering, Computer Science and Engineering, Electrical and Computer Engineering, Epidemiology, Genetics, Mathematics, Mechanical Engineering, Microbiology and Molecular Genetics, Pharmacology and Toxicology, Physics and Astronomy, Physiology, Plant Biology, Statistics and Proba-
bility, and Zoology. The student does not have the option of completing a major in quantitative biology alone.

The educational objectives of the interdepartmental program are to:
1. provide an opportunity for doctoral students to obtain an interdisciplinary and contemporary academic experience in the field of quantitative biology.
2. stimulate doctoral students with an interest in biological sciences to develop skills in chemical/physical or mathematical/computational approaches while encouraging doctoral students in the chemical, physical, mathematical, and computational sciences to apply their skills to solve biological problems.
3. develop an intellectual environment that will foster the growth of research and teaching in the area of quantitative biology.

In addition to meeting the requirements of the university and of the department and college in which the student is enrolled, the student must meet the requirements specified below.

Admission
In order to enroll in the dual major in quantitative biology a student must also have been admitted to a major in one of the affiliated departments. A minimum undergraduate grade-point average of 3.0 and undergraduate mathematics through calculus are required for admission to the dual major. Students may apply to the quantitative biology program at any time prior to their preliminary exam.

Admission to the quantitative biology dual major is by approval of the quantitative biology recruiting committee and the graduate program director. In special cases, an applicant who has deficiencies in background courses may be admitted to the dual major on a provisional basis.

Guidance Committee
The student must select two mentors, typically one from a biological discipline and one from a chemical, physical, mathematical, computational, or engineering discipline. Both of these mentors will serve on the guidance committee. At least two members of the student’s guidance committee must be members of the quantitative biology faculty. At least one member of the committee must be from a department or disciplinary program other than the one that administers the student’s disciplinary major. The student’s program of study will be planned in accordance with the statement on Dual Major Doctoral Degrees in the Graduate Education section of this catalog.

Requirements for the Dual Major in Quantitative Biology

1. At least two courses totaling a combined minimum of 5 credits that provide graduate training in biology to students in chemical/physical or mathematical/computational disciplines or that provide graduate training in chemical, physical, mathematical, or computational methods to those in the biological disciplines. The courses should be complementary to the student’s research, relevant to the goals of the quantitative biology program, and must be approved by the program director. Approved concentration areas include: molecular biophysics, systems biology, ecological and evolutionary modeling, or genomics, bioinformatics, and computational biology.
2. Twenty-four credits in Doctoral Dissertation Research (course number 996) from one of the departments referenced above.
3. Pass a comprehensive examination that will be defined by the requirements of the participating primary department and that will demonstrate appropriate knowledge of quantitative biology as determined by the guidance committee.
4. Submit a dissertation that, in the judgment of the student’s guidance committee, represents the area of quantitative biology.
5. Regularly attend and participate in quantitative biology sponsored seminars.

INTERDEPARTMENTAL SPECIALIZATIONS

UNDERGRADUATE

ENVIRONMENTAL STUDIES

The Specialization in Environmental Studies is available as an elective to all students who are enrolled in bachelor's degree programs in the College of Agriculture and Natural Resources, the College of Communication Arts and Sciences, the College of Engineering, the College of Natural Science, and the College of Social Science. The specialization is administered jointly by the five colleges referenced above. The College of Natural Science is the primary administrative unit.

The Specialization in Environmental Studies is designed to:
1. provide knowledge essential for understanding the physical environment that is inhabited and influenced by humans.
2. explain the way in which direct and indirect policy-making by social, economic, and political institutions affects environmental issues.

Students who elect the specialization are encouraged to complete Integrative Studies in Social, Behavioral, and Economic Sciences 225 in partial fulfillment of the university Integrative Studies requirement. Students who elect the specialization may complete an optional environmental studies project of 1 to 3 credits during the sophomore year.

Freshmen who have either declared the intent to complete the specialization in Environmental Studies or who have declared a major preference for one of the bachelor's degree programs that are related to environmental studies may elect the two-year Residential Initiative on the Study of the Environment (RISE). Students who elect this option will be housed in Hubbard Hall, where several of the courses that are required for the specialization will be taught. This integrated living–learning environment will allow students from the several colleges and disciplines to develop a sense of community and will promote a team approach to solving environmental problems.

Requirements for the Specialization in Environmental Studies:

The student must meet the requirements specified below:

1. Biological and Physical Dimensions of the Environment: .......... 14 or 15
   a. Both of the following courses (8 credits):
      - GLG 201 The Dynamic Earth .................. 4
      - ISS 310 People and Environment (I) .......... 4
      - Integrative Studies in Social, Behavioral, and Economic Sciences 310 may be used to satisfy both the requirements for the Specialization in Environmental Studies and University requirements.
   b. One of the following courses (3 credits):
      - BS 162 Organismal and Population Biology .......... 3
      - ISB 201 Insects, Globalization, and Sustainability .......... 3
      - ISB 202 Applications of Environmental and Organismal Biology .......... 3
   c. One of the following two options (3 or 4 credits):
      (1) Both of the following courses:
         - ZOL 355 Ecology .................. 3
         - ZOL 355L Ecology Laboratory (W) ........... 1
      (2) One of the following courses:
         - CSS 210 Fundamentals of Soil Science .......... 3
         - CSS 455 Pollutants in the Soil Environment .......... 3
         - ENE 280 Principles of Environmental Engineering and Science .......... 3
         - ESA 324 Water Resource Management .......... 3
         - FOR 404 Forest Ecology .......... 3
         - FW 207 Great Lakes: Biology and Management .......... 3
         - FW 364 Ecological Problem Solving .......... 3
         - FW 444 Conservation Biology .......... 3
         - GEO 203 Introduction to Meteorology .......... 3

INTERDEPARTMENTAL SPECIALIZATIONS

NECESSITY AND SENSE OF COMMUNITY TO DEVELOP SKILLS IN CHEMICAL PHYSICAL OR MATHEMATICAL SCIENCES TO APPLY THEIR SKILLS TO SOLVE BIOLOGICAL PROBLEMS.
The interdepartmental graduate specialization in Ecology, Evolutionary Biology and Behavior is designed to:

1. provide an opportunity for master's students to obtain a comprehensive and contemporary academic experience in the field of ecology, evolutionary biology and behavior.
2. help graduate students with an interest in ecology, evolutionary biology and behavior to become sensitive to their professional obligations and responsibilities.
3. develop an intellectual environment which will foster the growth of research and teaching in the area of ecology, evolutionary biology and behavior.

Requirements for the Interdepartmental Graduate Specialization in Ecology, Evolutionary Biology and Behavior

During the first year of study toward a master's degree, the student and the major professor select a guidance committee that will assist in planning the student's program of study for both the degree and the specialization. At least one member of the student's guidance committee shall be a member of the Ecology, Evolutionary Biology and Behavior faculty.

The specialization consists of the completion of the ecology, evolutionary biology and behavior required core courses listed below. Credits that are used to meet the requirements for the specialization may also be counted toward the requirements for the student's major at the discretion of the department.

Required Core Courses

1. One 3-credit course in ecology at the 800-900 level from one of the departments that is affiliated with the interdepartmental graduate specialization in ecology, evolutionary biology and behavior. A list of approved courses is available from the office of the ecology, evolutionary biology and behavior program.
2. One 3-credit course in evolution at the 800-900 level from one of the departments that is affiliated with the interdepartmental graduate specialization in ecology, evolutionary biology and behavior. A list of approved courses is available from the office of the ecology, evolutionary biology and behavior program.

Upon completion of the requirements for the degree program and of the interdepartmental Graduate Specialization in Ecology, Evolutionary Biology and Behavior, the student should contact the Ecology, Evolutionary Biology and Behavior Office and request certification for the completion of the specialization. After the certification is approved by the Dean of the College of Natural Science, the Office of the Registrar will enter the student's academic record the name of the specialization and the date that it was completed. This certification will appear on the student's transcript.

GRADUATE SPECIALIZATION IN ENVIRONMENTAL TOXICOLOGY

The College of Natural Science, the College of Agriculture and Natural Resources, the College of Engineering, and the College of Veterinary Medicine administer the Graduate Specialization in Environmental Toxicology. The College of Agriculture and Natural Resources is the primary administrative unit. For additional information, refer to the Graduate Specialization in Environmental Toxicology statement in the College of Agriculture and Natural Resources section of this catalog.
The Department of Biochemistry and Molecular Biology is administered jointly by the colleges of Natural Science, Human Medicine, and Osteopathic Medicine.

Biochemistry is the discipline that studies the chemistry of living matter. In addition to defining the chemical nature of the molecules of life, biochemists seek to understand the processes involved in their formation and degradation and how these processes are regulated. Such knowledge is a prerequisite for understanding normal biological functions and for adapting or modifying them for useful purposes. It is also fundamental to understanding abnormal functions that underlie biochemical disorders, ultimately leading to their treatment. Thus, biochemistry is a field with significance and applications across the biological spectrum, from the microbial through the plant and animal kingdoms. The potential significance of new discoveries in biochemistry, coupled with the rapid pace of conceptual and methodological advances in the field, make modern biochemistry a most exciting area for study and research.

The Department of Biochemistry and Molecular Biology offers a program leading to the Bachelor of Science degree. The undergraduate program coexists with an extensive graduate program for students seeking the M.S. or Ph.D. degrees. Both undergraduate and graduate students have ready access to a large and diverse faculty representing expertise in the various areas of modern biochemistry.

Biochemists have many types of career opportunities open to them. These opportunities include research in industrial, academic, or government laboratories; teaching at the high school or higher levels; and marketing, management, or administrative responsibilities in enterprises where training in biochemistry is an asset.

UNDERGRADUATE PROGRAMS

BIOCHEMISTRY and MOLECULAR BIOLOGY

Bachelor of Science

The Bachelor of Science program in Biochemistry and Molecular Biology for students in the College of Natural Science combines the elements of a liberal education with thorough preparation in biochemistry and molecular biology and the underlying principles of biology, chemistry, physics, and mathematics. It is intended primarily for those students who wish to pursue a career in which a sound knowledge of biochemistry and molecular biology is necessary, or for students who plan further studies at the graduate or professional level. With suitable choice of electives, the B.S. program offers the option of merging rigorous training in biochemistry and molecular biology with development of writing or pedagogical skills, leading to career options in science writing or teaching.

Undergraduate students are taught by professors who are familiar with the changing directions and emphases in the field of biochemistry and molecular biology. Each student has as an academic advisor a professional biochemist who is aware of current problems and opportunities in the field. In addition, a departmental undergraduate student affairs office is available to provide students with up-to-date information on university curriculum changes, career opportunities, and program development. Interested undergraduates are encouraged to participate, along with graduate students and postdoctoral fellows, in the on-going research of one of the faculty members.

Students seeking admission to the program should complete the high school science or college preparatory curriculum, ensuring that their programs include courses required for admission to the university.

Requirements for the Bachelor of Science Degree in Biochemistry and Molecular Biology

1. The University requirements for bachelor's degrees as described in the Undergraduate Education section of this catalog; 120 credits, including general elective credits, are required for the Bachelor of Science degree in Biochemistry and Molecular Biology.

2. The requirements of the College of Natural Science for the Bachelor of Science degree.

The credits earned in certain courses referenced in requirement 3. below may be counted toward College requirements as appropriate.

3. The following requirements for the major:

   a. The following courses outside the Department of Biochemistry: 63 to 72 CREDITS

      (1) Both of the following courses (5 credits):
          CEM 292 Quantitative Analysis .................. 3
          CEM 356 Organic Laboratory II .................. 2

      (2) One of the following groups of courses (8 or 9 credits):
          (a) BS 161 Cell and Molecular Biology ........... 3
          (b) BS 162 Organismal and Population Biology .... 3
          BS 171 Cell and Molecular Biology Laboratory ... 2
          BS 182H Honors Cell and Molecular Biology ....... 3
          BS 182H Organismal and Population Biology ....... 3

      (3) One of the following pairs of courses (7 or 8 credits):
          (a) CEM 141 General Chemistry .................. 4
          (b) CEM 142 General and Inorganic Chemistry .... 3
          CEM 151 General and Descriptive Chemistry ....... 4
          CEM 152 Principles of Chemistry ................ 3
          (c) CEM 181H Honors Cell and Molecular Biology .. 4
          CEM 182H Honors Cell and Molecular Biology ....... 4
          CB 171 Principles of Chemistry .......................... 3
          CB 172 Principles of Chemistry ................... 3

      (4) One of the following pairs of courses (2 or 4 credits):
          (a) CEM 161 Chemistry Laboratory I ............... 1
          CEM 162 Chemistry Laboratory II ................ 1
          (b) CEM 185 Honors Chemistry Laboratory I ...... 2
          CEM 186 Honors Chemistry Laboratory II ......... 2
          (c) CB 171L Introductory Chemistry Laboratory I .. 1
          CB 172L Introductory Chemistry Laboratory II .... 1

      (5) One of the following groups of courses (8 credits):
          (a) CEM 251 Organic Chemistry I .................. 3
          CEM 252 Organic Chemistry II .................... 3
          CEM 255 Organic Chemistry Laboratory .......... 2
          (b) CEM 351 Organic Chemistry I .................. 3
          CEM 352 Organic Chemistry II .................... 3
          CEM 355 Organic Laboratory I .................... 2

      (6) One of the following courses (3 or 4 credits):
          CSE 101 Computing Concepts and Competencies ... 3
          CSE 131 Technical Computing and Problem Solving .. 3
          CSE 231 Introduction to Programming ............... 4

      (7) One of the following pairs of courses (6 to 8 credits):
          (a) MTH 122 Calculus I .................................. 3
          MTH 123 Calculus II .................................. 4
          (b) MTH 152H Honors Calculus I ...................... 3
          MTH 153H Honors Calculus II ....................... 4
          (c) LB 118 Calculus I .................................. 4
          LB 119 Calculus II .................................. 4

      (8) One of the following pairs of courses (6 credits):
          (a) CEM 383 Introductory Physical Chemistry I .... 3
          CEM 384 Introductory Physical Chemistry II ...... 3
          (b) CEM 451 Quantum Chemistry .................... 3
          CEM 484 Molecular Thermodynamics ................ 3

      (9) One of the following groups of courses (8 or 10 credits):
          (a) PHY 183 Physics for Scientists and Engineers I .. 4
          PHY 184 Physics for Scientists and Engineers II ... 4
NATURAL SCIENCE
Department of Biochemistry and Molecular Biology

(b) PHY 231 Introductory Physics I ..................... 3
PHY 232 Introductory Physics II ...................... 3
PHY 233B Organic Chemistry Laboratory ............ 2
PHY 234B Calculus Concepts in Physics II .......... 2
(c) LB 273 Physics I .................................. 4
LB 274 Physics II .................................. 4
(10) Ten additional credits in approved biology courses at the 300-400 level.

The following courses in the Department of Biochemistry and Molecular Biology: .................................. 13
All of the following courses:
BMB 101 Frontiers in Biochemistry .................... 1
BMB 461 Advanced Biochemistry I .................... 3
BMB 462 Advanced Biochemistry II ................... 3
BMB 471 Biochemistry Laboratory (W) ............... 3
BMB 472 Biochemistry Laboratory .................... 3
c. One of the following capstone courses (2 to 8 credits):
BMB 495 Undergraduate Seminar .................... 2
BMB 499 Senior Thesis ................................ 2 to 8
LB 492 Senior Seminar (W) .......................... 4

BIOCHEMISTRY and MOLECULAR BIOLOGY/BIOTECHNOLOGY

Bachelor of Science

The Bachelor of Science program in Biochemistry and Molecular Biology/Biotechnology is intended primarily for those students who plan to pursue careers in industry, veterinary medicine, or related health sciences, or for students who plan advanced study in biotechnology and molecular biology.

The core curriculum in the Biochemistry and Molecular Biology/Biotechnology program is identical to that of the Biochemistry and Molecular Biology program. Additional course work introduces the student to the chemical engineering and microbiological aspects of biotechnology and allows for specialization through a broad range of approved biotechnology courses in the junior and senior years.

Requirements for the Bachelor of Science Degree in Biochemistry and Molecular Biology/Biotechnology

1. The University requirements for bachelor’s degrees as described in the Undergraduate Education section of this catalog; 120 credits, including general elective credits, are required for the Bachelor of Science degree in Biochemistry and Molecular Biology/Biotechnology.

The University’s Tier II writing requirement for the Biochemistry and Molecular Biology/Biotechnology major is met by completing Biochemistry and Molecular Biology 471. That course is referenced in item 2. below.

Students who are enrolled in the College of Natural Science may complete the alternative track to Integrative Studies in Biological and Physical Sciences that is described in item 1. under the heading Natural Science. In addition, students may pursue dual majors with the College of Arts and Letters, College of Engineering, and Osteopathic Medicine. Study for the Master of Science or Doctor of Philosophy degree with a major in biochemistry and molecular biology may be administered by any one of the three colleges referenced in requirement 3. below.

2. The requirements of the College of Natural Science for the Bachelor of Science degree.

   The credits earned in certain courses referenced in requirement 3. below may be counted toward College requirements as appropriate.

   CREDITS

3. The following requirements for the major:
   a. The following courses outside the Department of Biochemistry and Molecular Biology: .................................. 71 to 82
      (1) All of the following courses (8 credits):
      CHE 201 Material and Energy Balances .................. 3
CEM 262 Quantitative Analysis .......................... 3
CEM 356 Organic Laboratory II .......................... 2
(2) One of the following groups of courses (9 or 10 credits):
   (a) BS 161 Cell and Molecular Biology .................. 3
BS 162 Organism and Population Biology .............. 3
BS 171 Cell and Molecular Biology Laboratory .......... 2
BS 172 Organism and Population Biology Laboratory .... 2
   (b) BS 181H Honors Cell and Molecular Biology .......... 3
BS 182H Honors Organism and Population Biology ....... 3
BS 191H Honors Cell and Molecular Biology Laboratory ... 2
BS 192H Honors Organism and Population Biology Laboratory ... 2
   (c) LB 144 Biology I: Organismal Biology .............. 4
LB 145 Biology II: Cellular and Molecular Biology ........ 4
(3) One of the following pairs of courses (7 or 8 credits):
   (a) CEM 141 General Chemistry .......................... 4
CEM 142 General and Inorganic Chemistry .............. 3
   (b) CEM 151 General and Descriptive Chemistry ....... 4
CEM 152 Principles of Chemistry .......................... 3
   (c) CEM 181H Honors Chemistry I .......................... 4
CEM 182H Honors Chemistry II .......................... 3
   (d) LB 171 Principles of Chemistry I .......................... 4
LB 172 Principles of Chemistry II .......................... 3
(4) One of the following pairs of courses (2 or 4 credits):
   (a) CEM 161 Chemistry Laboratory I .......................... 1
CEM 162 Chemistry Laboratory II .......................... 1
   (b) CEM 185 Honors Chemistry Laboratory I .............. 2
CEM 186 Honors Chemistry Laboratory II .............. 2
   (c) LB 171L Introductory Chemistry Laboratory I .......... 1
LB 172L Introductory Chemistry Laboratory II .......... 1
(5) One of the following groups of courses (6 credits):
   (a) CEM 251 Organic Chemistry I .......................... 3
CEM 252 Organic Chemistry II .......................... 3
CEM 255 Organic Chemistry Laboratory .................. 2
   (b) CEM 351 Organic Chemistry I .......................... 3
CEM 352 Organic Chemistry II .......................... 3
CEM 355 Organic Laboratory I .......................... 2
(6) One of the following courses (3 or 4 credits):
CSE 131 Technical Computing and Problem Solving ......... 3
CSE 231 Introduction to Programming I .............. 4
(7) One of the following pairs of courses (6 to 8 credits):
   (a) MTH 132 Calculus I .................................. 3
MTH 133 Calculus II .................................. 4
   (b) MTH 152H Honors Calculus I .......................... 3
MTH 153H Honors Calculus II .......................... 3
   (c) LB 118 Calculus I .................................. 4
LB 119 Calculus II .................................. 4
(8) One of the following courses (3 credits):
CEM 383 Introductory Physical Chemistry I .............. 3
CEM 384 Introductory Physical Chemistry II ............ 3
(9) One of the following groups of courses (8 or 10 credits):
   (a) PHY 183 Physics for Scientists and Engineers I ........ 4
PHY 184 Physics for Scientists and Engineers II ........ 4
   (b) PHY 231 Introductory Physics I .......................... 3
PHY 232 Introductory Physics II .......................... 3
   (c) LB 273 Physics I .................................. 4
LB 274 Physics II .................................. 4
(10) One of the following courses (3 credits):
BMB 472 Biochemistry Laboratory ....................... 3
CSS 451 Biotechnology Applications for Plant Breeding and Genetics .......................... 3
MMG 408 Advanced Microbiology Laboratory (W) ......... 3
(11) One of the following courses (3 or 4 credits):
CSS 350 Introduction to Plant Genetics .................. 3
ZOL 341 Fundamental Genetics .......................... 4
(12) Eleven additional credits in approved advanced biotechnology courses at the 300-400 level.

GRADUATE STUDY

The Department of Biochemistry and Molecular Biology is administered jointly by the colleges of Natural Science, Human Medicine, and Osteopathic Medicine. Study for the Master of Science or Doctor of Philosophy degree with a major in biochemistry and molecular biology may be administered by any one of the three colleges referenced above. Study for the Doctor of Philosophy degree with a major in biochemistry and molecular biology—environmental toxicology is administered by the College of Natural Science. In addition, students may pursue dual majors with the Departments of Chemistry, Computer Science and Engineering, or Physics and Astronomy.

Areas of active research in the department are extensive and diverse. Such areas include biochemical genetics, plant biochemistry, biochemistry of development, biochemical instrumentation, protein structure, cell biology, eukaryotic and prokaryotic molecular biology, intermediary metabolism, cytokines and immune regulation, membrane biochemistry and signaling mechanisms, and mechanisms of enzyme catalysis. Opportunities are also avail-
able for joint programs or research in genetics, neuroscience, toxicology, biotechnology, microbial ecology, and plant sciences.

**BIOCHEMISTRY and MOLECULAR BIOLOGY**

The major objectives of the graduate programs in biochemistry are to help students to develop their creative potential and to prepare them for careers in research and teaching in the biochemical sciences. Students' programs of study are designed to develop independent thought as well as broad knowledge and technical skills, through formal and informal courses, laboratory experience, seminars, individual study, and, foremost, through original research that forms the basis for the student's thesis or dissertation.

**Master of Science**

In addition to meeting the requirements of the university and of the College of Natural Science, Human Medicine, or Osteopathic Medicine, students must meet the requirements specified below.

**Admission**

Persons with bachelor's degrees in chemistry, biochemistry, or any of several biological, physical, medical, or agricultural sciences are invited to apply for admission. Undergraduate preparation should include courses in general, organic, analytical, and physical chemistry, and in physics, general biology, basic biochemistry, and mathematics through calculus. Minor deficiencies may be rectified by taking appropriate undergraduate courses concurrently with graduate courses.

**Requirements for the Master of Science Degree in Biochemistry and Molecular Biology**

A total of 30 credits is required for the degree under either Plan A (with thesis) or Plan B (without thesis). Most students earn the degree under Plan A. A student may pursue Plan B only with the approval of the department's Director of Graduate Studies and chairperson. Such approval is granted only in exceptional cases. The program of study is planned by the student and the major professor. Specific courses in biochemistry, as well as courses in other areas considered relevant to the student's interests and chosen research area, are included in the program.

**Doctor of Philosophy**

In addition to meeting the requirements of the university and of the College of Natural Science, Human Medicine, or Osteopathic Medicine, students must meet the requirements specified below.

**Admission**

Persons with a bachelor's or master's degree in chemistry, biochemistry, or any of several biological, physical, medical, or agricultural sciences are invited to apply for admission. Students' programs of study are designed to develop independent thought as well as broad knowledge and technical skills, through formal and informal courses, laboratory experience, seminars, individual study, and, foremost, through original research that forms the basis for the student's thesis or dissertation.

**Requirements for the Doctor of Philosophy Degree in Biochemistry and Molecular Biology**

The program of study is planned by the student in consultation with the major professor and a guidance committee. Specific courses in biochemistry, as well as courses in other areas considered relevant to the student's interests and chosen research area, are included in the program.

It is expected that the dissertation will show original treatment of an important research problem, will give evidence of independent thought, and will be clearly, logically, and carefully written. It is also expected that the research on which the dissertation is based will be published in the scientific literature.

**BIOCHEMISTRY and MOLECULAR BIOLOGY —ENVIRONMENTAL TOXICOLOGY**

**Doctor of Philosophy**

For information about the Doctor of Philosophy degree program in biochemistry and molecular biology—environmental toxicology, refer to the statement on Doctoral Program in Environmental and Integrative Toxicological Sciences in the Graduate Education section of this catalog.
Undergraduate degree for bachelor's degrees as described in the Biomedical Laboratory Science Requirements for the Bachelor of Science Degree.

Three undergraduate programs that lead to the Bachelor of Science degree are available: biomedical laboratory science, clinical laboratory sciences, and diagnostic molecular science. These programs are designed to meet the professional needs of graduates entering a highly regulated and rapidly changing technological environment and to prepare students for continuing professional education and advanced study beyond the bachelor's degree.

**BIOMEDICAL LABORATORY SCIENCE**

The biomedical laboratory science major is designed to prepare students for careers as laboratorians in a variety of settings or to pursue graduate or advanced professional education. The clinical laboratory experience required for national certification as a laboratory professional is not included in this program. Students desiring certification are responsible for securing accredited clinical experiences subsequent to completion of the degree requirements. The Biomedical Laboratory Diagnostics Program will assist students in seeking and gaining placements.

**Admission as a Junior**

Students must meet the requirements for admission to the College of Natural Science.

**Requirements for the Bachelor of Science Degree in Biomedical Laboratory Science**

1. The University requirements for bachelor's degrees as described in the Undergraduate Education section of this catalog; 120 credits, including general elective credits, are required for the Bachelor of Science degree in Biomedical Laboratory Science.

   The University's Tier II writing requirement for the Biomedical Laboratory Science major is met by completing Biomedical Laboratory Diagnostics 455. That course is referenced in item 3. b. below.

   Students who are enrolled in the College of Natural Science may complete the alternative track to Integrative Studies in Biological and Physical Sciences that is described in item 1. under the heading Graduation Requirements in the College statement. Certain courses referenced in requirement 3. below may be used to satisfy the alternative track.

2. The requirements of the College of Natural Science for the Bachelor of Science degree.

   The credits earned in certain courses referenced in requirement 3. below may be counted toward College requirements as appropriate.

3. The following requirements for the major:

   a. Courses outside Biomedical Laboratory Science: .......... 43 to 48

      (1) All of the following courses (29 credits):

      - BS 161 Cell and Molecular Biology .......... 3
      - BS 171 Cell and Molecular Biology Laboratory .......... 2
      - CEM 141 General Chemistry .......... 4
      - CEM 161 Chemistry Laboratory I .......... 1
      - CEM 152 Chemistry Laboratory II .......... 1
      - CEM 251 Organic Chemistry I .......... 3
      - CEM 252 Organic Chemistry II .......... 3
      - MMG 301 Introductory Microbiology .......... 3
      - MMG 463 Medical Microbiology .......... 3
      - PHY 231 Introductory Physics I .......... 3
      - PHY 232 Introductory Physics II .......... 3

     (2) One of the following courses (3 credits):

     - MTH 124 Survey of Calculus I .......... 3
     - MTH 132 Calculus I .......... 3

     (3) One of the following courses (3 or 4 credits):

     - STT 201 Statistical Methods .......... 3
     - STT 202 Statistical Methods .......... 4
     - STT 231 Statistics for Scientists .......... 3
     - STT 351 Probability and Statistics for Engineering .......... 3
     - STT 421 Statistics I .......... 3

     (4) One of the following, either (a) or (b) (4 or 6 credits):

     - (a) BMB 401 Comprehensive Biochemistry .......... 4
     - (b) BMB 461 Advanced Biochemistry I .......... 3

     - (b) BMB 462 Advanced Biochemistry II .......... 3

     (5) One of the following, either (a), (b), or (c) (4 or 6 credits): 31

     - (a) PSL 350 Introductory Physiology .......... 4
     - (b) PSL 431 Human Physiology I .......... 3
     - (c) PSL 432 Human Physiology II .......... 3

     b. All of the following Biomedical Laboratory Diagnostics courses:

     - BLD 204 Mechanisms of Disease .......... 3
     - BLD 213 Application of Clinical Laboratory Principles .......... 3
     - BLD 220 Preparing for a Health Professions Career .......... 1
     - BLD 324 Fundamentals of Hematology, Hemostasis, and Urinanalysis .......... 3
     - BLD 414 Clinical Chemistry Analysis and Practice .......... 3
     - BLD 416 Clinical Chemistry .......... 4
     - BLD 424 Advanced Hematology, Hemostasis, and Urinanalysis .......... 3
     - BLD 430 Molecular Laboratory Diagnostics .......... 2
     - BLD 434 Clinical Immunology .......... 3
     - BLD 435 Transfusion and Transplantation Medicine .......... 3
     - BLD 450 Eukaryotic Pathogens .......... 3
     - BLD 455 Integrating Clinical Laboratory Science Discipline (W) .......... 2

**CLINICAL LABORATORY SCIENCES**

The clinical laboratory sciences major is designed to prepare students for certification in medical technology/clinical laboratory science. The program includes courses in the biomedical laboratory sciences, communications, mathematics and statistics, and clinical laboratory sciences coupled with clinical practicum experiences. It is designed to prepare graduates for certification and immediate employment in clinical laboratories upon graduation by including a six-month hospital laboratory experience. Admission to this program is limited. Students seeking admission must complete the admission procedure outlined below.

The Bachelor of Science degree program in clinical laboratory sciences has been accredited by the National Accrediting Agency for Clinical Laboratory Sciences, 5600 N. River Road, Suite 720, Rosemont, Illinois 60018.

**Admission as a Junior**

Enrollment in the clinical laboratory sciences major is limited. A new class is admitted at the junior level each academic year. Students beyond junior standing may be considered for admission contingent upon the projected schedule for completion of the degree requirements and availability of clinical placement sites. Applications for admission are accepted at any time.

To be considered for admission, the applicant must meet the following minimal criteria, in addition to the College of Natural Science admission requirements:

1. Have an overall grade-point average of 2.5 or better including courses taken at other institutions.
2. Have completed Biological Science 161 and 171; Chemistry 251 and 252; and Biomedical Laboratory Diagnostics 213.

Students may apply before attainment of the above criteria in order to demonstrate their intentions to major in clinical laboratory sciences, however their applications will not be processed until all requirements are fulfilled. Students who present other exceptional credentials but do not meet the grade-point criterion noted above may be considered for admission on a probationary basis.

Applications for admission to the clinical laboratory sciences major are reviewed by a committee of faculty. Factors considered by the Admission Committee in the applicant’s review and admission action are (1) academic record including grade-point averages in science and non-science courses, (2) grades for selected preclinical courses, (3) laboratory science exposure, (4) interview, and (5) compositions.

**Academic Standards**

To progress to the clinical phase of the curriculum, students must earn a grade-point average of 2.0 or higher in Microbiology and Molecular Genetics 463 and Biomedical Laboratory Diagnostics 324, 417, and 435.
A specific statement of the policies for the clinical phase is provided in the Student Policies for Clinical Laboratory Students. These policies are provided to all students upon acceptance to the major, but may be obtained earlier from the Biomedical Laboratory Diagnostics Program, 322 N. Kedzie Hall. Admitted students are responsible for knowing and adhering to these program policies.

Requirements for the Bachelor of Science Degree in Clinical Laboratory Sciences

1. A minimum of 136 credits is required for the Bachelor of Science degree in Clinical Laboratory Sciences.

2. The University requirements for bachelor’s degrees as described in the Undergraduate Education section of this catalog.

3. The requirements of the College of Natural Science for the Bachelor of Science degree.

4. The credits earned in certain courses referenced in requirement 4. below may be counted toward College requirements as appropriate.

4. The following requirements for the major:

   a. Courses outside Medical Technology: CREDITS

   (1) All of the following courses (34 credits):
   - BLD 161 Cell and Molecular Biology .......................................................... 3
   - BLD 171 Laboratory Techniques ........................................................................ 2
   - CEM 141 General Chemistry .............................................................................. 4
   - CEM 161 Chemistry Laboratory I ...................................................................... 1
   - CEM 162 Chemistry Laboratory II ..................................................................... 1
   - CEM 251 Organic Chemistry I .......................................................................... 3
   - CEM 252 Organic Chemistry II ......................................................................... 3
   - CEM 333 Instrumental Methods and Applications ........................................... 2
   - MMG 301 Introductory Microbiology ................................................................ 3
   - MMG 463 Medical Microbiology ...................................................................... 3
   - MMG 464 Diagnostic Microbiology Laboratory ............................................... 3
   - PHY 231 Introductory Physics I ......................................................................... 3
   - PHY 232 Introductory Physics II ....................................................................... 3

   (2) One of the following courses (3 credits):
   - MTH 124 Survey of Calculus ........................................................................... 3

   (3) One of the following courses (3 or 4 credits):
   - STT 200 Statistical Methods ............................................................................ 3
   - STT 201 Statistical Methods ............................................................................. 4
   - STT 231 Statistics for Scientists ......................................................................... 3
   - STT 351 Probability and Statistics for Engineering ........................................... 3
   - STT 421 Statistics I ........................................................................................... 3

   (4) One of the following, either (a) or (b) or (b) (4 or 6 credits):
   - (a) BMB 401 Comprehensive Biochemistry .................................................... 4
   - (b) BMB 461 Advanced Biochemistry I ............................................................ 3
   - (c) BMB 462 Advanced Biochemistry II .......................................................... 3

   (5) One of the following, either (a), (b), or (c) (4 or 6 credits):
   - (a) PSL 290 Introductory Physiology .............................................................. 4
   - (b) PSL 310 Physiology for Pre-Health Professionals ....................................... 4
   - (c) PSL 431 Human Physiology I ..................................................................... 3
   - PSL 432 Human Physiology II ........................................................................ 3

   b. All of the following Medical Technology courses: CREDITS

   - BLD 204 Mechanisms of Disease ................................................................. 3
   - BLD 213 Application of Clinical Laboratory Principles .................................. 3
   - BLD 220 Preparing for a Health Professions Career ....................................... 1
   - BLD 324 Fundamentals of Hematology, Hemostasis, and Urinalysis .......... 3
   - BLD 324L Introductory Laboratory in Hematology, Hemostasis, and Urinalysis 1
   - BLD 416 Clinical Chemistry ............................................................................. 4
   - BLD 417 Quality Processes in Diagnostic Laboratory Testing ..................... 2
   - BLD 424 Advanced Hematology, Hemostasis, and Urinalysis ...................... 2
   - BLD 424L Advanced Laboratory in Hematology, Hemostasis, and Urinalysis 2
   - BLD 430 Molecular Laboratory Diagnostics ................................................. 2
   - BLD 433 Clinical Immunology and Immunohematology Laboratory ........ 1
   - BLD 434 Clinical Immunology ........................................................................ 3
   - BLD 435 Transfusion and Transplantation Medicine ...................................... 3
   - BLD 442 Education and Management in the Clinical Laboratory ................. 3
   - BLD 450 Eukaryotic Pathogens ....................................................................... 3
   - BLD 455 Integrating Clinical Laboratory Science Discipline (W) ...................... 2
   - BLD 471 Advanced Clinical Chemistry Laboratory ........................................ 3
   - BLD 472 Advanced Clinical Chemistry .......................................................... 3

DIAGNOSTIC MOLECULAR SCIENCE

Diagnostic molecular science is the allied health profession whose practitioners specialize in performing medical laboratory tests on DNA and RNA. These tests are used to diagnose and monitor hereditary conditions and acquired diseases such as leukaemia and infectious diseases. The diagnostic molecular science major is a professional program designed to prepare students for national certification in diagnostic molecular science qualifying them to work in medical laboratories performing molecular testing. Graduates will also be prepared for positions in research and industrial laboratories. The program includes courses in mathematics and statistics, molecular biology, genetics, chemistry, biochemistry, and clinical laboratory sciences and includes a semester-long practicum experience in clinical and other laboratories. The first phase of the program is the pre-professional and preparatory courses that include the university and college requirements as well as prerequisites to the major courses. The second phase is the on-campus professional (major) courses. The third phase is a clinical practicum in clinical and other laboratories.

Admission as a Junior

Enrollment in the diagnostic molecular science major is limited. A new class is admitted at the junior level each calendar year. Applications for admission must be received by December 1 in the year in which admission is sought.

To be considered for admission, the applicant must meet the following minimal criteria, in addition to the College of Natural Science requirements:

1. Have an overall grade-point average of 2.5.

2. Have completed a minimum of 56 credits which must include the following courses:

   a. Biomedical Laboratory Diagnostics 213.
   b. Chemistry 162, 251, and 252.
   c. Mathematics 116 or equivalent.
   d. Biological Science 161 and 171.

Applications for admission to the diagnostic molecular science major are reviewed by a committee of the faculty. Factors considered by the admission committee in the applicant’s review and admission action are (1) grade-point average in science and non-science courses, (2) grade-point average for selected preclinical laboratory science courses, (3) diagnostic laboratory exposure, (4) interview, and (5) written compositions.

Academic Standards

To progress to the clinical phase of the curriculum, students must earn a 2.0 or higher in Zoology 341, and Biomedical Laboratory Diagnostics 436 and 438.

A specific statement of the policies for the clinical phase is provided in the Student Policies for Diagnostic Molecular Science Students. These policies are provided to all students upon acceptance to the major, but may be obtained earlier from the Biomedical Laboratory Diagnostics Program, 322 N. Kedzie Hall.
Admitted students are responsible for knowing and adhering to these program policies.

Requirements for the Bachelor of Science Degree in Diagnostic Molecular Science

1. The University requirements for bachelor’s degrees as described in the Undergraduate Education section of this catalog; 120 credits, including general elective credits, are required for the Bachelor of Science degree in Diagnostic Molecular Science. The University’s Tier II writing requirement for the Diagnostic Molecular Science major is met by completing Biomedical Laboratory Diagnostics 455. That course is referenced in item 3. b. below.

   Students who are enrolled in the College of Natural Science may complete the alternative track to Integrative Studies in Biological and Physical Sciences that is described in item 1. under the graduation requirements in the College statement. Certain courses referenced in requirement 3. below may be used to satisfy the alternative track.

   The completion of Statistics 200 or 201 referenced in item 3. a. (4) may also satisfy the University mathematics requirement.

2. The requirements of the College of Natural Science for the Bachelor of Science degree.

   The credits earned in certain courses referenced in requirement 3. below may be counted toward College requirements as appropriate.

3. The following requirements for the major:

   a. Courses outside biomedical laboratory diagnostics: 46 or 47 CREDITS
      (1) All of the following courses (33 credits):
      BMB 461 Advanced Biochemistry I .......................... 3
      BMB 462 Advanced Biochemistry II .......................... 3
      BS 161 Cell and Molecular Biology .......................... 3
      BS 171 Cell and Molecular Biology Laboratory ............... 2
      CEM 141 General Chemistry .................................. 4
      CEM 161 Chemistry Laboratory I ............................. 1
      CEM 162 Chemistry Laboratory II ............................ 1
      CEM 251 Organic Chemistry I ................................. 3
      CEM 252 Organic Chemistry II ................................ 3
      PHY 231 Introductory Physics I ............................... 3
      PHY 232 Introductory Physics II ............................... 3
      ZOL 341 Fundamental Genetics ................................ 4
      (2) One of the following courses (3 credits):
      MTH 124 Survey of Calculus I ............................... 3
      MTH 132 Calculus I ......................................... 3
      (3) One of the following courses (4 credits): PSL 250 Introductory Physiology .................................. 4
      PSL 310 Physiology for Pre-Health Professionals ............ 4
      (4) One of the following courses (3 or 4 credits):
      STT 201 Statistical Methods .................................. 3
      STT 231 Statistics for Scientists ............................. 3
      STT 421 Statistics I ......................................... 3
      (5) One of the following courses (3 credits):
      STT 371 Statistical Biology .................................. 3
      STT 422 Statistics II ....................................... 3
      STT 464 Statistics for Biologists ............................. 3
      b. All of the following biomedical laboratory diagnostics courses: 30 CREDITS
      BLD 204 Mechanisms of Disease ................................ 2
      BLD 213 Application of Clinical Laboratory Principles ...... 2
      BLD 220 Preparing for a Health Professions Career ......... 1
      BLD 414 Clinical Chemistry Analysis and Practice ........... 1
      BLD 436 Principles of Diagnostic Molecular Science ...... 2
      BLD 437 Clinical Applications of Diagnostic Molecular Science ................................................. 2
      BLD 438 Molecular Diagnostic Laboratory .................... 2
      BLD 442 Education and Management in the Clinical Laboratory ......................................................... 3
      BLD 455 Integrating Clinical Laboratory Science Discipline (W) ....................................................... 2
      BLD 482 Advanced Diagnostic Molecular Science ............ 2
      BLD 483 Molecular Diagnostic Experience in Hematopathology and Oncology .................................. 2
      BLD 484 Molecular Diagnostic Experience in Infectious Disease ......................................................... 2
      BLD 485 Molecular Diagnostic Experience in Inherited and Predictive Genetics ................................. 2
      BLD 486 Molecular Diagnostic Experience in Genotyping and Individual Identification ......................... 2
      c. At least two of the following courses: 5 to 7 CREDITS
      BLD 324 Fundamentals of Hematology, Hemostasis, and Urinalysis ..................................................... 3
      BLD 416 Clinical Chemistry ..................................... 4
      BLD 424 Advanced Hematology, Hemostasis, and Urinalysis ................................................................. 2
      BLD 434 Clinical Immunology .................................. 3
      MMG 301 Introductory Microbiology .......................... 3
      MMG 431 Microbial Genetics .................................. 3
      MMG 433 Microbial Genomics .................................. 3
      MMG 445 Microbial Biotechnology (W) ......................... 3
      MMG 463 Medical Microbiology ................................ 3
      ZOL 450 Cancer Biology (W) ................................ 3

Graduate Study

Three master’s degree programs are available. The biomedical laboratory science program for working professionals is available online in a non-thesis option. The clinical laboratory science program is a traditional science-oriented degree with both thesis and non-thesis options. The non-thesis option is also available online. The biomedical laboratory operations program is a professional master’s degree blending business management with the science needed to prepare managers for positions in research, industry and medical settings.

Biomedical Laboratory Science

The Master of Arts degree in Biomedical Laboratory Science is administered by the Biomedical Laboratory Diagnostics Program. The program is designed to enhance the student’s knowledge base and broaden their perspectives across the profession. In addition to meeting the requirements of the university and of the College of Natural Science, students must meet all requirements specified below.

Admission

Regular admission to the Master of Arts degree in Biomedical Laboratory Science requires completion of a bachelor of science degree, with a minimum grade-point average of 3.0. Applicants must submit official transcripts, three letters of recommendation, a letter of intent or purpose statement, a brief resume, and the General GRE (Graduate Record Exam) score. For applicants in which English is not their first language, the Test of English as a Foreign Language (TOEFL) must be taken. Scholastic record, experience, personal qualifications and career goals are taken into consideration to determine the applicant’s acceptability.

Applicants who fail to meet the criteria for regular admission, may apply for provisional admission if they have demonstrated a high probability of success and will be provided other options to obtain a post-baccalaureate clinical laboratory education.

Complete information regarding the admission process can be found at www.bld.msu.edu.

Requirements for the Master of Arts Degree in Biomedical Laboratory Science

The program is available online and only under Plan B (without thesis). The student must complete a total of 30 credits from the following:

1. All of the following courses (8 or 9 credits) CREDITS
   BLD 801 Biomedical Laboratory Diagnostics Seminar ........ 1
   BLD 811 Fundamentals of Scientific Research ................... 1
   BLD 821 Advanced Clinical Laboratory Practice .................. 1
   BLD 890 Selected Problems in Clinical Laboratory Science .... 1
   PHM 830 Experimental Design and Analysis ...................... 3
   2. Complete at least 16 credits from the following courses:
      BLD 815 Cell Biology in Health and Disease I .................. 2
      BLD 816 Cell Biology in Health and Disease II ................ 2
      BLD 830 Concepts in Molecular Biology ........................ 2
      BLD 831 Clinical Application of Molecular Biology ............ 2
      BLD 835 Hemostasis, Thrombosis and Effective Resource Management ......................................................... 3
      BLD 836 Adverse Transfusion Outcomes: Detection, Monitoring and Prevention ................................................. 2
      BLD 837 Transfusion Service Operations and Management .... 2
      BLD 842 Managing Biomedical Laboratory Operations .......... 2
      BLD 844 Topics in Biomedical Laboratory Operations ......... 1
      BLD 846 Decision Processes for Biomedical Laboratory Operations ......................................................... 2
      BLD 850 Concepts in Immunodiagnosis ............................ 2
      BLD 851 Clinical Application of Immunodiagnostic Principles ......................................................... 2
      3. Complete 5 credits of electives as approved by the guidance committee.
      4. Successfully complete a capstone project.
**Requirements for Both Plan A and Plan B:**

The master's degree program in biomedical laboratory operations (BLMO) is designed for individuals with previous clinical laboratory experience who seek career advancement as managers, administrators, researchers, entrepreneurs and policymakers in the field. The core of this program resides in three major components: science, management and practice. The science component focuses on post-baccalaureate courses planned to develop a high level of competence within the student’s chosen biomedical laboratory discipline. The management component provides a solid foundation in general business including resource management, communication skills, organizational structures, decision making, and essential aspects of working in a regulated industry; it includes courses which specifically emphasize the management of a biomedical laboratory. The practice component requires participation in an industrial/clinical internship. This experience is intended to expose individuals to real-life problems with an expectation of generating positive, realistic solutions. Internships are conducted in a closely coordinated manner among non-academic industrial or clinical partners, Michigan State University faculty members and the student. The program of study can be planned to meet individual interests and career paths, while providing a structured sequence useful for personal and professional development. For select students, opportunities are available for acquisition of professional credentials.

In addition to meeting the requirements of the university and the College of Natural Science, students must meet the requirements specified below.

**Admission**

Certification as a medical technologist/clinical laboratory scientist is preferred, but not required, for admission to the master's degree program in clinical laboratory sciences.

For additional information on admission, contact the Graduate Program Director, 322 N. Kedzie Lab, Michigan State University, East Lansing, Michigan 48824–1031.

**Requirements for the Master of Science Degree in Clinical Laboratory Sciences**

A total of 30 credits is required for the degree under either Plan A (with thesis) or Plan B (without thesis). The student's program of study must be approved by the student's academic advisor.

**CLINICAL LABORATORY SCIENCES**

The graduate program in clinical laboratory sciences leads to the Master of Science degree. The program emphasizes the multidisciplinary nature of the laboratory sciences, encourages research that crosses traditional laboratory disciplines, and promotes innovative thinking.

The curriculum is customized to the student's interests and to supporting the project each student identifies. Students may conduct research projects with both resident and adjunct faculty. In addition to meeting the requirements of the university and of the College of Natural Science, students must meet the requirements specified below.

**Admission**

Certification as a medical technologist/clinical laboratory scientist is preferred, but not required, for admission to the master's degree program in clinical laboratory sciences.

For additional information on admission, contact the Graduate Program Director, 322 N. Kedzie Lab, Michigan State University, East Lansing, Michigan 48824–1031.

**DEPARTMENT of CHEMISTRY**

**Robert E. Maleczka Jr., Acting Chairperson**

Chemistry is the science concerned with the properties, composition, structure, and reactivity of matter. Synthesis of new organic and inorganic compounds and materials is central to chemistry and is complemented by efforts to develop analytical methods and instrumentation needed to identify and characterize these substances. Studies of reaction rates, thermodynamics, and molecular structure contribute to a deeper understanding of chemical transformations, providing a basis for optimization of known reactions and discovery of new reactions. The work of chemists is not limited to laboratory experiments. Computational approaches are increasingly important tools in understanding molecular structure and reactivity, designing new materials, and discovering new drugs. The molecular-level understanding provided by
chemistry plays an important role in interdisciplinary research to solve complex problems in medicine, energy capture and storage, advanced materials, and environmental science. Chemists find employment in education, government, and diverse industries including but not limited to pharmaceuticals, agrichemicals, consumer products, paper, electronics, and plastics. Study of chemistry at the undergraduate and graduate level also provides an excellent foundation for post-graduate study in medicine, public policy and patent law.

UNDERGRADUATE PROGRAMS

CHEMISTRY

Bachelor of Science

The degree Bachelor of Science with a major in chemistry is designed to provide a thorough foundation in the various fields of chemistry and the related sciences, as well as a proper educational balance in the liberal arts. The program is for students planning careers in the chemical industries or in governmental laboratories and for those planning graduate study in chemistry. The Bachelor of Science degree program in chemistry has been accredited by the American Chemical Society.

The completion of one or more semesters of independent research (Chemistry 400H or 420) is strongly recommended for students in this program.

A detailed description of this program may be obtained from the department.

Requirements for the Bachelor of Science Degree in Chemistry

1. The University requirements for bachelor's degrees as described in the Undergraduate Education section of this catalog; 120 credits, including general elective credits, are required for the Bachelor of Science degree in Chemistry.

The University's Tier II writing requirement for the Chemistry major is met by completing Chemistry 355, 395, 415, and 435. Those courses are referenced in items 3 b. (3) and 3 b. (4) below.

Students who are enrolled in the College of Natural Science may complete the alternative track to Integrative Studies in Biological and Physical Sciences that is described in item 1. under the heading native track to Integrative Studies in Biological and Physical Sciences that is described in the College statement. Certain courses referenced in requirement 3 below may be used to satisfy the alternative track.

2. The requirements of the College of Natural Science for the Bachelor of Science degree.

The credits earned in certain courses referenced in requirement 3 below may be counted toward College requirements as appropriate.

3. The following requirements for the major:

a. The following courses outside the Department of Chemistry: CREDITS

(1) One of the following courses (3 or 4 credits): 31 to 34
- BS 161 Cell and Molecular Biology . . . . . . . . . . . . . . . . 3
- BS 162 Organismal and Population Biology . . . . . . . . . . . . . 3
- ENT 205 Pests, Society and Environment . . . . . . . . . . . . . . . 3
- PLB 105 Plant Biology . . . . . . . . . . . . . . . . . . . . . . . . . 3
- PSL 250 Introductory Physiology . . . . . . . . . . . . . . . . . . . . 4
- ZOL 141 Introductory Human Genetics . . . . . . . . . . . . . . . 3

(2) All of the following courses (24 credits):
- MTH 132 Calculus I . . . . . . . . . . . . . . . . . . . . . . . . . . 3
- MTH 133 Calculus II . . . . . . . . . . . . . . . . . . . . . . . . . 3
- MTH 234 Multivariable Calculus . . . . . . . . . . . . . . . . . . . 4
- MTH 235 Differential Equations . . . . . . . . . . . . . . . . . . 3
- PHY 183 Physics for Scientists and Engineers I . . . . . . . . . . . 4
- PHY 184 Physics for Scientists and Engineers II . . . . . . . . . . 4
- PHY 191 Physics Laboratory for Scientists, I . . . . . . . . . . . . 1
- PHY 192 Physics Laboratory for Scientists, II . . . . . . . . . . . 1

(3) One of the following courses (4 or 6 credits):
- BMB 401 Comprehensive Biochemistry . . . . . . . . . . . . . . 4
- BMB 461 Advanced Biochemistry . . . . . . . . . . . . . . . . . . 3

b. The following courses in the Department of Chemistry: CREDITS

(1) One of the following pairs of courses (7 or 8 credits):
- (a) CEM 151 General and Descriptive Chemistry . . . . . . . . 4
- (b) CEM 152 Principles of Chemistry . . . . . . . . . . . . . . . . 3
- (c) CEM 181H Honors Chemistry I . . . . . . . . . . . . . . . . . 4
- (d) CEM 182H Honors Chemistry II . . . . . . . . . . . . . . . . . 4

Bachelor of Arts

Many occupations require a moderate training in chemistry combined with training in one or more other areas. Accordingly, the Bachelor of Arts degree is intended for the students desiring a lesser degree of specialization than required for the Bachelor of Science degree. Students who desire chemistry as a major in the programs of premedicine, predentistry and prelaw, or as training for many professional or industrial positions, may elect this program. Ample opportunity in the choice of electives is provided for students who are planning to obtain positions such as the following: technical secretaries, technical librarians, technical sales personnel, chemical patent lawyers, and criminologists. Additional collateral work may be necessary if this program is presented for admission to a school of graduate studies. A more detailed statement may be obtained from the Department of Chemistry.

Requirements for the Bachelor of Arts Degree in Chemistry

1. The University requirements for bachelor's degrees as described in the Undergraduate Education section of this catalog; 120 credits, including general elective credits, are required for the Bachelor of Arts degree in Chemistry.

The University's Tier II writing requirement for the Chemistry major is met by completing Chemistry 333 and 444. Those courses are referenced in items 3 b. (3) and 3 b. (4) below.

Students who are enrolled in the College of Natural Science may complete the alternative track to Integrative Studies in Biological and Physical Sciences that is described in item 1. under the heading native track to Integrative Studies in Biological and Physical Sciences that is described in the College statement. Certain courses referenced in requirement 3 below may be used to satisfy the alternative track.

2. The requirements of the College of Natural Science for the Bachelor of Arts degree.

The credits earned in certain courses referenced in requirement 3 below may be counted toward College requirements as appropriate.

3. The following requirements for the major:

a. The following courses outside the Department of Chemistry: CREDITS

(1) One of the following courses (3 or 4 credits): 18 or 19
- BS 161 Cell and Molecular Biology . . . . . . . . . . . . . . . . 3
- BS 162 Organismal and Population Biology . . . . . . . . . . . . . 3
- ENT 205 Pests, Society and Environment . . . . . . . . . . . . . . . 3
- PLB 105 Plant Biology . . . . . . . . . . . . . . . . . . . . . . . . . 3
- PSL 250 Introductory Physiology . . . . . . . . . . . . . . . . . . . . 4
- ZOL 141 Introductory Human Genetics . . . . . . . . . . . . . . . 3

(2) All of the following courses (15 credits):
- MTH 132 Calculus I . . . . . . . . . . . . . . . . . . . . . . . . . . 3
- MTH 133 Calculus II . . . . . . . . . . . . . . . . . . . . . . . . . 3
- PHY 183 Introductory Physics I . . . . . . . . . . . . . . . . . . . . . 3
- PHY 184 Introductory Physics II . . . . . . . . . . . . . . . . . . . . . 3
- PHY 191 Introductory Physics Laboratory I . . . . . . . . . . . . . . 1
- PHY 192 Introductory Physics Laboratory II . . . . . . . . . . . . . . 1

b. The following courses in the Department of Chemistry: 33 or 34

(1) One of the following pairs of courses (7 or 8 credits):
- (a) CEM 141 General Chemistry . . . . . . . . . . . . . . . . . . . 4
- (b) CEM 142 General and Inorganic Chemistry . . . . . . . . . . . 3
- (c) CEM 151 General and Descriptive Chemistry . . . . . . . . . . . 4
- (d) CEM 152 Principles of Chemistry . . . . . . . . . . . . . . . . 3
- (e) CEM 181H Honors Chemistry I . . . . . . . . . . . . . . . . . 4
- (f) CEM 182H Honors Chemistry II . . . . . . . . . . . . . . . . . 4

(2) One of the following pairs of courses (4 credits): 4
- (a) CEM 162 Chemistry Laboratory II . . . . . . . . . . . . . . . . 1
- (b) CEM 262 Quantitative Analysis . . . . . . . . . . . . . . . . . . . . 3
Bachelor of Science

The major in Chemical Physics provides a strong foundation in chemistry, physics and mathematics for those students who have a professional interest in the areas of overlap between chemistry and physics. It is particularly suitable for students planning to pursue a graduate degree in the area of chemical physics.

A detailed description of this program may be obtained from either the Department of Physics and Astronomy or the Department of Chemistry.

Requirements for the Bachelor of Science Degree in Chemical Physics

1. The University requirements for bachelor's degrees as described in the Undergraduate Education section of this catalog: 120 credits, including general elective credits, are required for the Bachelor of Science degree in Chemical Physics.

The University's Tier II writing requirement for the Chemical Physics major is met by completing Chemistry 499. That course is referenced in item 3. b. (6) below.

Students who are enrolled in the College of Natural Science may complete the alternative track to Integrative Studies in Biological and Physical Sciences that is described in item 1. under the heading Graduation Requirements in the College statement. Certain courses referenced in requirement 3. below may be used to satisfy the alternative track.

2. The requirements of the College of Natural Science for the Bachelor of Science degree.

The credits earned in certain courses referenced in requirement 3. below may be counted toward College requirements as appropriate.

3. The following requirements for the major:

a. The following courses outside the Department of Chemistry: 

   (1) One of the following courses (3 or 4 credits):
   - BS 161 Cell and Molecular Biology
   - BS 162 Organismal and Population Biology
   - ENT 205 Pests, Society and Environment
   - MMG 201 Fundamentals of Microbiology
   - PLB 105 Plant Biology
   - PSL 250 Introductory Physiology
   - ZOL 141 Introductory Human Genetics

   CREDITS: 43 to 46

b. The following courses in the Department of Chemistry: 

   (2) All of the following courses (25 credits):
   - MTH 132 Calculus II
   - MTH 332 Calculus III
   - MTH 324 Multivariable Calculus
   - MTH 325 Differential Equations
   - PHY 191 Physics Laboratory for Scientists, I
   - PHY 192 Physics Laboratory for Scientists, II
   - PHY 321 Classical Mechanics I
   - PHY 401 Quantum Physics I
   - PHY 481 Electricity and Magnetism I

   CREDITS: 3

   (3) One of the following courses (3 credits):
   - MTH 309 Linear Algebra
   - MTH 314 Matrix Algebra with Applications

   CREDITS: 3

   (4) One of the following courses (3 credits):
   - MTH 310 Abstract Algebra I and Number Theory
   - MTH 320 Analysis I
   - MTH 421 Analysis II
   - MTH 425 Complex Analysis
   - MTH 441 Ordinary Differential Equations II
   - MTH 442 Partial Differential Equations
   - MTH 443 Boundary Value Problems for Engineers
   - MTH 451 Numerical Analysis I

   CREDITS: 3

   (5) One of the following pairs of courses (6 or 8 credits):
   - (a) PHY 183 Physics for Scientists and Engineers I
   - PHY 184 Physics for Scientists and Engineers II
   - (b) PHY 193H Honors Physics I–Mechanics
   - PHY 294H Honors Physics II–Electromagnetism
   - (c) PHY 215 Thermodynamics and Modern Physics
   - PHY 410 Thermal and Statistical Physics

   CREDITS: 49 or 50

b. The following courses in the Department of Chemistry: 

   (1) One of the following courses (7 or 8 credits):
   - (a) CEM 151 General and Descriptive Chemistry
   - CEM 152 Principles of Chemistry
   - CEM 181H Honors Chemistry I
   - CEM 182H Honors Chemistry II

   CREDITS: 4

   (2) One of the following pairs of courses (2 or 4 credits):
   - CEM 161 Chemistry Laboratory I
   - CEM 162 Chemistry Laboratory II
   - CEM 185H Honors Chemistry Laboratory I
   - CEM 186H Honors Chemistry Laboratory II

   CREDITS: 2

   (3) Six credits in organic chemistry courses other than Chemistry 150.

   CREDITS: 6

   (4) One of the following courses (3 credits):
   - CEM 333 Instrumental Methods and Applications
   - CEM 395 Analytical/Physical Laboratory
   - CEM 435 Analytical Chemistry Laboratory
   - CEM 495 Molecular Spectroscopy

   CREDITS: 2

   (5) Two of the following courses (6 credits):
   - CEM 434 Advanced Analytical Chemistry
   - CEM 483 Quantum Chemistry
   - CEM 484 Molecular Thermodynamics

   CREDITS: 3

   (6) Both of the following courses (6 credits):
   - CEM 411 Inorganic Chemistry
   - CEM 499 Chemical Physics Seminar

   CREDITS: 4

   The completion of Chemistry 499 fulfills the department's capstone course requirement.

COMPUTATIONAL CHEMISTRY

Bachelor of Science

The Bachelor of Science degree program with a major in computational chemistry is designed to provide a thorough foundation in the various fields of chemistry and the related sciences, as well as a proper educational balance in the liberal arts. In addition, it provides a means for chemistry majors with an interest in the application of computers and computing in chemistry to obtain expertise in computer fundamentals. The program is for students planning careers in the chemical industries or in governmental laboratories and for those planning graduate study in chemistry.

Requirements for the Bachelor of Science Degree in Computational Chemistry

1. The University requirements for bachelor's degrees as described in the Undergraduate Education section of this catalog: 120 credits, including general elective credits, are required for the Bachelor of Science degree in Computational Chemistry.

The University’s Tier II writing requirement for the Computational Chemistry major is met by completing Chemistry 355, 395, 435, and 481. Those courses are referenced in items 3. b. (3) and 3. b. (4) below.

Students who are enrolled in the College of Natural Science may complete the alternative track to Integrative Studies in Biological and Physical Sciences that is described in item 1. under the heading Graduation Requirements in the College statement. Certain courses referenced in requirement 3. below may be used to satisfy the alternative track.

2. The requirements of the College of Natural Science for the Bachelor of Science degree.

The credits earned in certain courses referenced in requirement 3. below may be counted toward College requirements as appropriate.

3. The following requirements for the major:

a. The following courses outside the Department of Chemistry:

   (1) One of the following courses (3 or 4 credits):
   - BS 110 Organisms and Population Biology
   - BS 111 Cells and Molecules
   - ENT 205 Pests, Society and Environment
   - MMG 205 Allied Health Microbiology
   - PLB 105 Plant Biology
   - PSL 250 Introductory Physiology
   - ZOL 141 Introductory Human Genetics

   CREDITS: 4

   (2) All of the following courses (46 credits):
   - CSE 231 Introduction to Programming I
   - CSE 232 Introduction to Programming II
   - CSE 260 Discrete Structures in Computer Science
   - CSE 320 Computer Organization and Assembly Language Programming
   - MTH 132 Calculus I
   - MTH 133 Calculus II
   - MTH 234 Multivariable Calculus
   - PHY 422 Classical Mechanics II
   - PHY 431 Optics I
   - PHY 472 Quantum Physics II
   - PHY 482 Electricity and Magnetism II

   CREDITS: 30 to 33

   (3) One of the following courses (7 or 8 credits):
   - (a) CEM 151 General and Descriptive Chemistry
   - CEM 152 Principles of Chemistry
   - CEM 181H Honors Chemistry I
   - CEM 182H Honors Chemistry II

   CREDITS: 4

   (4) One of the following pairs of courses (2 or 4 credits):
   - CEM 161 Chemistry Laboratory I
   - CEM 162 Chemistry Laboratory II
   - CEM 185H Honors Chemistry Laboratory I
   - CEM 186H Honors Chemistry Laboratory II

   CREDITS: 2

   (5) Six credits in organic chemistry courses other than Chemistry 150.

   CREDITS: 6

   (6) One of the following courses (3 credits):
   - CEM 333 Instrumental Methods and Applications
   - CEM 395 Analytical/Physical Laboratory
   - CEM 435 Analytical Chemistry Laboratory
   - CEM 495 Molecular Spectroscopy

   CREDITS: 2

   (7) Two of the following courses (6 credits):
   - CEM 434 Advanced Analytical Chemistry
   - CEM 483 Quantum Chemistry
   - CEM 484 Molecular Thermodynamics

   CREDITS: 3

   (8) Both of the following courses (6 credits):
   - CEM 411 Inorganic Chemistry
   - CEM 499 Chemical Physics Seminar

   CREDITS: 4

   The completion of Chemistry 499 fulfills the department's capstone course requirement.

   (9) One of the following courses (3 credits):
   - CEM 333 Instrumental Methods and Applications
   - CEM 395 Analytical/Physical Laboratory
   - CEM 435 Analytical Chemistry Laboratory
   - CEM 495 Molecular Spectroscopy

   CREDITS: 2

   (10) Two of the following courses (6 credits):
   - CEM 434 Advanced Analytical Chemistry
   - CEM 483 Quantum Chemistry
   - CEM 484 Molecular Thermodynamics

   CREDITS: 3

   (11) Both of the following courses (6 credits):
   - CEM 411 Inorganic Chemistry
   - CEM 499 Chemical Physics Seminar

   CREDITS: 4

   The completion of Chemistry 499 fulfills the department's capstone course requirement.
### CHEMISTRY

#### Master of Science

For the Master of Science program in chemistry, the areas of study are analytical, inorganic, organic, and physical.

In addition to meeting the requirements of the university and of the College of Natural Science, students must meet the requirements specified below.

#### Admission

Only those persons who are enrolled in a Doctor of Philosophy degree program in the Department of Chemistry or the Department of Physics and Astronomy at Michigan State University may petition the Committee on Chemical Physics for admission to the doctoral program in chemical physics.

#### Requirements for the Doctor of Philosophy Degree in Chemical Physics

The student must:

1. Pass doctoral comprehensive examinations of the cumulative type. Details about these examinations may be obtained from the department.
2. Complete at least 6 credits in 800–900 level Chemistry courses.
3. Complete at least 6 credits in 800–900 level Physics and Astronomy courses.
4. Pass an oral examination on the proposed research.

#### CHEMICAL PHYSICS

#### Doctor of Philosophy

In addition to meeting the requirements of the university and of the College of Natural Science, students must meet the requirements specified below.

Doctor of Philosophy

Programs for the Doctor of Philosophy degree, based on a broad and thorough undergraduate program, emphasize study and original research in one of the following areas: analytical, inorganic, organic, or physical chemistry, or chemical physics. Numerous cross-disciplinary research opportunities involving, for example, biochemistry or the cyclotron laboratory, are also available.

In addition to meeting the requirements of the university and of the College of Natural Science, students must meet the requirements specified below.

Admission

Students holding bachelor’s degrees, or master’s degrees or the equivalent, may be admitted for study at the doctoral level on either a provisional or regular basis. Applicants are expected to have had in their undergraduate programs one year each of general, analytical, organic, and physical chemistry, one year of physics, and one year of calculus or their equivalents. Deficiencies in the undergraduate program must be removed. Admission to the doctoral program is dependent on having a 3.00 or better grade-point average and upon satisfactory performance on the qualification examinations given in the areas of analytical, inorganic, organic, and physical chemistry. The qualification examinations will be waived for students who score at the 75th percentile or higher on the Graduate Record Examination Subject Test in Chemistry.

Requirements for the Doctor of Philosophy Degree in Chemistry

Satisfactory performance on doctoral comprehensive examinations of the cumulative type is required. Details about these and the qualification examinations may be obtained from the department.

Satisfactory performance on two oral examinations, one to demonstrate research preparedness and the other as a defense of the dissertation, is required.

CHEMISTRY—ENVIRONMENTAL TOXICOLOGY

Doctor of Philosophy

For information about the Doctor of Philosophy degree program in chemistry—environmental toxicology, refer to the statement on Doctoral Program in Environmental and Integrative Toxicological Sciences in the Graduate Education section of this catalog.

DEPARTMENT of FOOD SCIENCE

and HUMAN NUTRITION

The Department of Food Science and Human Nutrition is administered jointly by the College of Agriculture and Natural Resources and the College of Natural Science.

UNDERGRADUATE PROGRAMS

The department offers a Bachelor of Science degree program with majors in dietetics, food science, and in nutritional sciences through the College of Agriculture and Natural Resources. A Minor in Nutritional Sciences and a Specialization in Food Processing and Technology is also available. For information about all of these programs, refer to the statement on the Department of Food Science and Human Nutrition in the College of Agriculture and Natural Resources section of this catalog.

DEPARTMENT of GEOLOGICAL SCIENCES

David W. Hyndman, Chairperson

The Earth is a dynamic system subject to both cyclic and directional changes over time. Energy from the Sun drives Earth’s water and biogeochemical cycles which, in turn, control surface processes, including climate change and sedimentation. Energy from Earth’s interior drives the tectonic cycle and its surface manifestations, including volcanic eruptions and earthquakes. Biological evolution adds directionality to the history of the Earth, and is not reducible to simple physical forces. The geological sciences study these changes and processes as they exist now, as they will develop in the future, and as they have evolved during the 4.5 billion-year history of the Earth.

The biological, chemical, and physical aspects of the Earth are all integrated into the geological sciences, which draw heavily on these other sciences, as well as mathematics and statistics. Geological studies provide knowledge about the availability of natural resources, including groundwater and fossil fuels; the reduction of damage from hazards including volcanic eruptions, earthquakes, and floods; and processes affecting biological evolution, such as those that produce major extinctions. From these diverse studies geologists gain knowledge about the controls on the physical and biological environment. That knowledge allows people to deal with issues ranging from groundwater pollution to climate change.

The undergraduate programs in environmental geosciences and geological sciences lead to the Bachelor of Science degree. The department offers a concentration in geophysics for both degrees and a program for earth science secondary education teacher certification.
Requirements for the Bachelor of Science Degree in Environmental Geosciences

1. The University requirements for bachelor’s degrees as described in the Undergraduate Education section of this catalog; 120 credits, including general elective credits, are required for the Bachelor of Science degree in Environmental Geosciences. The University’s Tier II writing requirement for the Environmental Geosciences major is met by completing one of the following courses: Geological Sciences 431 and 492. Those courses are referenced in item 3.b. (1) below.

Students who are enrolled in the College of Natural Science may complete the alternative track to Integrative Studies in Biological and Physical Sciences that is described in item 1. under the heading Graduation Requirements in the College statement. Certain courses referenced in requirement 3.b. below may be used to satisfy the alternative track.

2. The requirements of the College of Natural Science for the Bachelor of Science degree.

The credits earned in certain courses referenced in requirement 3.b. below may be counted toward College requirements as appropriate.

3. The following requirements for the major:

   a. The following courses outside the Department of Geological Sciences:

<table>
<thead>
<tr>
<th>Credits</th>
<th>Course Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>24 to 26</td>
<td>CEM 161 Chemistry Laboratory I</td>
</tr>
<tr>
<td>4</td>
<td>MTH 132 Calculus I</td>
</tr>
<tr>
<td></td>
<td>MTH 133 Calculus II</td>
</tr>
</tbody>
</table>

   b. One of the following groups of courses (7 credits):

<table>
<thead>
<tr>
<th>Credits</th>
<th>Course Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>4</td>
<td>CEM 141 General Chemistry I</td>
</tr>
<tr>
<td>4</td>
<td>CEM 142 General and Inorganic Chemistry</td>

<tr>
<td>4</td>
<td>GLG 431 Sedimentology and Stratigraphy (W)</td>
</tr>
<tr>
<td>4</td>
<td>PHY 492 Senior Experience in Earth Sciences (W)</td>
</tr>
</tbody>
</table>

   The completion of GLG 492 satisfies the department’s capstone course requirement.

   d. One course from each of the following areas (9 or 10 credits): Geophysical Systems, Geochanical Systems, Geobiological Systems, and Additional credits in Geological Sciences courses at the 300–400 level to total 40 credits. The credits that are used to satisfy this requirement may be used to satisfy either the requirements for the geosciences major or the requirements for the environmental geosciences major, but not both of these requirements.

   Concentration in Geophysics

   A concentration in geophysics is also available. Students must complete all of the following courses. Courses that are used to satisfy the requirements for the concentration may also be used to satisfy the requirements for the Bachelor of Science degree in Environmental Geosciences. The concentration will be noted on the student’s transcript.

<table>

of those requirements. The credits that are used to satisfy this re-
requirement may be used to satisfy either the requirements for the
geological sciences major or the requirements for the environ-
mental geosciences major, but not both of those requirements.
The completion of Geological Sciences 492 fulfills the depart-
ment's capstone course requirement.

Concentration in Geophysics
A concentration in geophysics is also available. Students must
complete all of the following courses. Courses that are used to
satisfy the requirements for the concentration may also be used to
satisfy the requirements for the Bachelor of Science degree in
Geological Sciences. The concentration will be noted on the stu-
dent's transcript.

CREDITS
1. All of the following courses (22 credits):
   GLG 470 Principles of Modern Geophysics .................. 3
   GLG 471 Applied Geophysics ................................ 4
   MTH 234 Multivariate Calculus .......................... 4
   MTH 235 Differential Equations ............................ 3
   PHY 183 Physics for Scientists and Engineers I ............ 4
   PHY 184 Physics for Scientists and Engineers II ............ 4

TEACHER CERTIFICATION OPTIONS
The earth science—interdepartmental disciplinary major leading
to the Bachelor of Science degree is available for teacher certifi-
cation. Students who complete the requirements for this discipli-

ary major and the requirements for teacher certification choose
whether they wish to be recommended for certification in earth
science or general science.

An earth science disciplinary minor is also available for teacher
certification.

Students who elect the earth science—interdepartmental discip-
lnary major or the earth science disciplinary minor must contact
the Department of Geological Sciences.

For additional information, refer to the statement on TEACHER
CERTIFICATION in the Department of Teacher Education sec-
tion of this catalog.

GRADUATE STUDY
The Department of Geological Sciences offers programs in geo-

logical sciences leading to the Master of Science and Doctor of
Philosophy degrees. The department also offers programs in en-
vironmental geosciences leading to the Master of Science and
Doctor of Philosophy degrees.

The goal of the graduate programs in the Department of Geo-
logical Sciences is to develop creative and productive scientists
who will address problems facing the modern environment and
problems related to understanding Earth's past and future.

The department's graduate programs emphasize the study of
the biological, chemical, and physical processes of the Earth and
the application of knowledge about these processes to solve ap-
plied and basic problems. Environmental studies focus on fluids,
minerals, and biologically mediated processes and their interac-
tions in the environment. Studies of Earth's past involve time peri-
ods ranging in days to billions of years. From this knowledge,
predictions on Earth's future may be made.

The department is focused around three research areas: solid
earth systems (geodynamics, tectonics, earthquake seismology,
and igneous petrology), the environment (physical and chemical
hydrogeology; geochemical cycles; glacial geology; isotopic,
aqueous, environmental, inorganic, and organic geochemistry;
sedimentology; mineral weathering; petrology of low temperature
systems) and evolution, including paleoenvironments;
paleoecology; and fossil plants, invertebrates, and vertebrates),
and geocognition and science education (how people understand
an interpret geological phenomena and how personal models of
the natural world impact learning in geosciences).

The Department of Geological Sciences is affiliated with the
Doctor of Philosophy degree program with a major in ecology,
evolutionary biology and behavior. For information about a Doc-
tor of Philosophy degree program that involves ecology, evolu-
tionary biology and behavior and a major in the Department of
Geological Sciences, refer to the statement on the doctoral pro-
gram in ecology, evolutionary biology and behavior.

Students who are enrolled in the Master of Science degree pro-
gram in the Department of Geological Sciences may elect spe-
cializations in ecology, evolutionary biology and behavior and in
environmental toxicology. For additional information, refer to the
statement on the Specialization in Ecology, Evolutionary Biology
and Behavior and to the Graduate Specialization in Environment-
al Toxicology statement in the College of Agriculture and Natural
Resources section of this catalog.

ENVIRONMENTAL GEO SCIENCES

Master of Science
The Master of Science degree program in environmental geosciences is available under either Plan A (with thesis) or Plan B (without thesis).

In addition to meeting the requirements of the university and of
the College of Natural Science, students must meet the require-
ments specified below.

Admission
When applying for admission to the program, an applicant must specify either Plan A or Plan B.

Academic record, letters of recommendation, and Graduate
Record Examination (GRE) General Test scores are considered in admission decisions.

For regular admission to the master's degree program in
environmental geosciences under Plan A, the student must have:
1. A bachelor's degree in a physical or biological science or in engineering from a recognized educational institution.
2. Completed the courses in physics, chemistry, and math-
ematics that are required for the Bachelor of Science degree
with a major in geological sciences at Michigan State Univer-
sity, or equivalent courses.
3. At least 12 credits in geological sciences courses.
4. A grade-point average of at least 3.00.
5. Satisfactory scores on the GRE General Test.

Provisional admission may be granted to an applicant who has
not completed the course work referenced in items 2. and 3.
above. Deficiencies must be removed by completing collateral
courses.

For regular admission to the master's degree program in
environmental geosciences under Plan B, the student must have:
1. Completed a Master of Science degree in the geosciences
for which a thesis was required.
2. A grade-point average of at least 3.00.
3. Satisfactory scores on the GRE General Test.

Requirements for the Master of Science Degree in
Environmental Geosciences
A total of 30 credits is required for the degree under either Plan A
or Plan B. The student's program of study must be approved by
the student’s guidance committee. The student must meet the re-
requirements specified below:

Requirements for Both Plan A and Plan B

1. Tier I requirements (10 to 12 credits):
   a. General Component. The following course (1 credit):
      GLG 423 Environmental Geosciences .......................... 1
   b. Soil Component. One of the following courses (3 or 4 credits):
      CSS 455 Pollutants in the Soil Environment .................. 3
      CSS 825 Clay Mineralogy and Soils Genesis ................... 4
      CSS 855 Interfacial Environmental Chemistry ................. 4
   c. Chemical Component. One of the following courses (3 credits):
      GLG 421 Environmental Geochemistry ......................... 3
      GLG 821 Aqueous Geochemistry ................................ 3
      GLG 823 Isotope Geochemistry .................................. 3
   d. Hydrogeology Component. One of the following courses
      (3 or 4 credits):
      CE 421 Engineering Hydrology .................................. 3
      CE 821 Groundwater Hydraulics ................................ 3
      GLG 411 Hydrogeology ............................................ 4

2. Tier II requirement. One of the following courses (3 or 4 credits):
   GEO 408 Soil Geomorphology Field Study ...................... 4
   GLG 412 Glacial and Quaternary Geology ....................... 3
   GLG 422 Organic Geochemistry .................................... 3
   GLG 471 Applied Geophysics ....................................... 4
   GLG 481 Reservoirs and Aquifers ................................ 4
   GLG 822 Analytical Applications for Biogeochemical Research ... 4
   GLG 863 Mineral–Water Interactions ............................ 4

   With the approval of the guidance committee, a student may substitute a course listed in the Tier I requirements for one of the courses listed above.

   A student who completed any course listed in the Tier I requirements or in the Tier II re-
   quirement prior to enrollment in the program must substitute another course approved
   by the student’s guidance committee.

   A given course may be used to satisfy either the Tier I requirements or the Tier II re-
   quirement, but not both of those requirements.

Additional Requirements for Plan A

1. Tier III requirement:
   Seven to 13 credits in courses approved by the student’s guidance com-
   mittee.

2. Tier IV requirement:
   Four to 7 credits in GLG 899 Master’s Thesis Research. The research
   area may focus on any topic that may have applications to solving prob-
   lems related to the environment. The student must include in the thesis
   proposal a paragraph that addresses the environmental applications of
   the thesis topic selected.

Additional Requirements for Plan B

1. Tier III requirement:
   Thirteen to 16 credits in courses approved by the student’s guidance com-
   mittee.

2. Tier IV requirement:
   One credit of GLG 898 Special Problems in Environmental Geosciences. The student must complete a research paper or project
   while enrolled in Geological Sciences 898. The topic of the paper or pro-
   ject must be mutually agreed upon by the student and the student’s aca-
   demic advisor.

**Doctor of Philosophy**

The core of the Doctor of Philosophy degree program in envi-
ronmental geosciences is independent research. Course require-
ments are designed to support the student’s professional goals.
Commonly, research programs are pursued within the specialty of
the staff. However, innovative research is encouraged in any area
of environmental geosciences.

In addition to meeting the requirements of the university and of
the College of Natural Science, students must meet the require-
ments specified below.

**Admission**

Students holding bachelor’s or master’s degrees may be admitted
to the doctoral program in environmental geosciences on the ba-
sis of their performance during the previous two years of aca-
demic work.

**Requirements for the Doctor of Philosophy Degree in Environmental Geosciences**

The program of study is determined by mutual agreement be-
tween the student and the guidance committee. The student must complete, or have completed prior to admission, 9 credits of
course work in geological sciences including a course in physical
geochemistry and at least 3 credits in 800-level course work.

The required comprehensive examination involves both an oral
and a written portion and covers the area of the student’s re-
search specialty, those areas that interface with that specialty, and
the significance of the proposed research program. Students who are admitted to the doctoral program with master’s degrees
must pass the comprehensive examination during the second
year of enrollment in the program. Students who are admitted to
the doctoral program with bachelor’s degrees must pass the com-
prehensive examination during the third year of enrollment in the
program.

**ENVIRONMENTAL GEOSCIENCES—ENVIRONMENTAL TOXICOLOGY**

**Doctor of Philosophy**

For information about the Doctor of Philosophy degree program
in environmental geosciences—environmental toxicology, refer to
the statement on Doctoral Program in Environmental and Integra-
tive Toxicological Sciences in the Graduate Education section of
this catalog.

**GEOLOGICAL SCIENCES**

**Master of Science**

In addition to meeting the requirements of the university and of
the College of Natural Science, students must meet the require-
ments specified below.

**Admission**

Academic record, letters of recommendation, and Graduate Re-
cord Examination (GRE) General Test scores are considered in
admission decisions. For regular admission, the student must have:

1. A bachelor’s degree in a physical or biological science or in
   mathematics from a recognized educational institution.
2. Completed the courses in physics, chemistry, mathematics, and
geological sciences that are required for the Bachelor of
Science degree with a major in geological sciences at Michi-
gan State University, or equivalent courses.
3. A grade–point average of at least 3.00.
4. Satisfactory scores on the GRE General Test.

Depending on the proposed area of specialization, provisional
admission may be granted to an applicant who has not completed
the courses referenced in item 2. above. Deficiencies must be re-
moved by completing collateral courses before a thesis proposal
will be accepted.

**Requirements for the Master of Science Degree in Geological Sciences**

The student must complete a total of 30 credits for the degree un-
der Plan A (with thesis). Of the 30 credits, no more than 7 credits
may be in Geological Sciences 899.
**Doctor of Philosophy**

The core of the Doctor of Philosophy degree program in geological sciences is independent research. Course requirements are designed to support the student’s professional goals. Commonly, research programs are pursued within the specialty of the staff. However, innovative research is encouraged in any area of geological sciences.

In addition to meeting the requirements of the university and of the College of Natural Science, students must meet the requirements specified below.

**Admission**

Students holding bachelor's or master's degrees may be admitted to the doctoral program in geological sciences on the basis of their performance during the previous two years of academic work.

**Requirements for the Doctor of Philosophy Degree in Geological Sciences**

The program of study is determined by mutual agreement between the student and the guidance committee.

The required comprehensive examination involves both an oral and a written portion and covers the area of the student's research specialty, those areas that interface with that specialty, and the significance of the proposed research program. Students who are admitted to the doctoral program with master's degrees must pass the comprehensive examination during the second year of enrollment in the program. Students who are admitted to the doctoral program with bachelor's degrees must pass the comprehensive examination during the third year of enrollment in the program.

**W. K. KELLOGG BIOLOGICAL STATION**

**Katherine L. Gross, Director**

The W. K. Kellogg Biological Station is administered jointly by the College of Natural Science and the College of Agriculture and Natural Resources. The Station developed from the environmental foresight and interest of W. K. Kellogg and has evolved into a world-renowned ecological research center and public education facility for biological, agricultural, and natural resource sciences.

Located 50 miles southwest of East Lansing near Battle Creek and Kalamazoo, the Biological Station's 3,352 acres encompass the Kellogg Bird Sanctuary, Kellogg Experimental Forest, Kellogg Farm, Kellogg Dairy Center, Kellogg Education Center and Research Laboratories, and Lux Arbor Reserve. Within this multiple-land use facility, a unique community of scholars addresses ways to achieve harmony between biological conservation and productive agriculture and forestry.

The teaching and research programs of the Biological Station are closely coordinated with those of the College of Natural Science and the College of Agriculture and Natural Resources. The programs focus on the study of natural and managed landscapes and cover a spectrum that includes basic ecology, evolutionary biology, wildlife management, forestry, and agriculture.

The Biological Station's resident faculty hold joint appointments with appropriate departments and teach courses both at the Station and on the main campus. Field oriented courses in the biological sciences are offered at the Station during the summer session and in a new study away program in the fall semester.

Research facilities are provided for students who are candidates for Master of Science and doctor of Philosophy degrees and for postdoctoral research associates. Residence may be established upon approval of the research problem and the sponsorship of a resident faculty member.

Thesis or dissertation research is supervised by the candidate's major professor, the guidance committee, and, if not otherwise included, a member of the resident faculty at the Biological Station. Investigations by independent research workers are encouraged throughout the year.

Information concerning the instructional program and research opportunities may be obtained by either writing the Director, W.K. Kellogg Biological Station, Hickory Corners, Michigan 49060–9516.

**DEPARTMENT of MATHEMATICS**

**Yang Wang, Chairperson**

Mathematics, which may partially be defined as the science of number and form, is a vital tool in all branches of knowledge the university covers, from accounting to zoology. Mathematics is also studied for its own sake by those who become fascinated by the results of modern mathematics and the making of new discoveries. The department offers a wide variety of courses that begin with extensions of high school mathematics and reach to the frontiers of mathematical knowledge.

Mathematics majors can build their programs in many different ways to pursue a career path of their choice. The department offers several Honors sequences, so that highly motivated mathematics students will find challenging programs. Students in mathematics, regardless of their major preferences, are encouraged to consult with the department before registration concerning the possibility of advanced placement or enrollment in honors sections.

**UNDERGRADUATE PROGRAMS**

The Department of Mathematics offers several degree opportunities. These opportunities include a Bachelor of Arts or Bachelor of Science in Mathematics; a Bachelor of Science in Mathematics, Advanced; a Bachelor of Arts or Bachelor of Science in Computational Mathematics, and a Bachelor of Science in Actuarial Science.

The Bachelor of Science degree in Actuarial Science prepares students to work in insurance companies, banks, investment firms, government agencies, hospitals, and business firms where there is a need to weigh the financial consequences of risk. Course work is designed to provide the academic background for successful completion of five of the examinations of the Society of Actuaries (SOA): Exam P/1, Exam FM/2, Exams MLC/3 and MFE/3, and Exam C/4, including completion of the Validation by Educational Experience (VEE) course work in applied statistics, corporate finance, and economics. Completion of these SOA exams and VEE courses is required for those intending to become an Associate of the Society of Actuaries.

The Bachelor of Science Degree in Mathematics, Advanced is designed to prepare mathematically talented students for additional studies in top graduate schools or to pursue rewarding careers in the mathematical sciences and related fields. While much of the course work is honors, students are not required to be a member of The Honors College. Students will often be eligible,
as early as their junior year, to take graduate-level mathematics course work, although none is required for the degree.

A Minor in Mathematics and a Specialization in Actuarial Science are also available.

Requirements for the Bachelor of Science Degree in Actuarial Science

1. The University requirements for bachelor's degrees as described in the "Undergraduate Education" section of this catalog; 120 credits, including general elective credits, are required for the Bachelor of Science degree in Actuarial Science.

The University's Tier II writing requirement for the Actuarial Science major is met by completing Mathematics 309 or 496. Those courses are referenced in item 3. below.

Students who are enrolling in the College of Natural Science may complete the alternative track to Integrative Studies in Biological and Physical Sciences that is described in item 1. under the heading Graduation Requirements in the College statement. Certain courses referenced in requirement 3. below may be used to satisfy the alternative track.

2. The requirements of the College of Natural Science for the Bachelor of Science degree.

The credits earned in certain courses referenced in requirement 3. below may be counted toward College requirements as appropriate.

3. The following requirements for the major:

   a. One course of at least 3 credits in biological science, entomology, microbiology, physiology, plant biology, or zoology.
   
   b. One of the following groups of courses (8 or 10 credits):
      (1) CEM 141 General Chemistry ............................................... 4
      CEM 142 General and Inorganic Chemistry ............................ 3
      CEM 161 Chemistry Laboratory I ........................................ 1
      (2) CEM 151 General and Descriptive Chemistry . 4
      CEM 152 Principles of Chemistry ............................................ 3
      CEM 161 Chemistry Laboratory I ............................................. 1
      (3) CEM 181H Honors Chemistry I ........................................... 4
      CEM 182H Honors Chemistry II ............................................. 4
      CEM 185H Honors Chemistry Laboratory I ............................. 1
      (4) LB 171 Principles of Chemistry ......................................... 4
      LB 171L Introductory Chemistry Laboratory I ......................... 1
      LB 172 Principles of Chemistry ............................................. 3
      c. One of the following groups of courses (6 or 8 credits):
         (1) PHY 183 Physics for Scientists and Engineers I ................. 4
         PHY 184 Physics for Scientists and Engineers II .................. 4
         (2) PHY 193H Honors Physics I – Mechanics .......................... 3
         PHY 294H Honors Physics II – Electromagnetism ................. 3
         (3) LB 271 Physics I .......................................................... 3
         LB 272 Physics II ............................................................ 3
d. One of the following groups of courses (6 to 8 credits):
   (1) MTH 132 Calculus I .......................................................... 3
   MTH 133 Calculus II ............................................................ 4
   (2) LB 118 Calculus I ............................................................ 4
   LB 119 Calculus I ............................................................... 4
   (3) MTH 152H Honors Calculus I ............................................. 3
   MTH 153H Honors Calculus II ............................................... 3
   e. One of the following courses (1 credit):
      MTH 220 Calculus III ....................................................... 4
   f. One of the following courses (3 credits):
      MTH 235 Differential Equations .................................. 3
      MTH 255H Honors Differential Equations ...................... 3
      MTH 340 Ordinary Differential Equations .................. 3
g. One of the following courses (21 credits):
   MTH 490 Directed Studies ............................................... 3
   MTH 491B Teamwork Experience ......................................... 1
   h. All of the following courses (21 credits):
      MTH 309 Linear Algebra ................................................... 3
      MTH 360 Theory of Mathematical Interest ......................... 3
      MTH 458 Financial Mathematics for Actuaries .................... 3
      STT 441 Probability and Statistics I: Probability .......... 3
      STT 445 Actuarial Models I ................................................ 3
      STT 456 Actuarial Models II ............................................... 3
      STT 459 Construction and Evaluation of Actuarial Models .... 3
   i. One of the following courses (3 credits):
      MTH 457 Introduction to Mathematical Finance .............. 3
      STT 442 Probability and Statistics II: Statistics ............ 3
   j. One of the following courses (3 credits):
      MTH 491A Actuarial Internship .................................. 3
      MTH 496 Capstone in Mathematics .................................. 3
   k. All of the following courses (18 credits):
      ACC 230 Survey of Accounting Concepts ........................................ 3
      EC 201 Introduction to Microeconomics .......................... 3
      EC 202 Introduction to Macroeconomics ................................ 3
      FI 311 Financial Management ............................................ 3
      FI 321 Theory of Investments .............................................. 3
      FI 379 Financial Derivatives (D) .......................................... 3
   l. One of the following courses (3 or 4 credits):
      CSE 131 Technical Computing and Problem Solving ............. 3
      CSE 231 Introduction to Programming I ............................ 4

Requirements for the Bachelor of Science Degree in Computational Mathematics

1. The University requirements for bachelor's degrees as described in the "Undergraduate Education" section of this catalog; 120 credits, including general elective credits, are required for the Bachelor of Science degree in Computational Mathematics.

The University's Tier II writing requirement for the Computational Mathematics major is met by completing Mathematics 309 or 410 and 496. Those courses are referenced in item 3. (c) (1) below.

Students who are in the teacher certification program are required to complete Mathematics 330 or 432 and Statistics and Probability 430.

Students who are enrolled in the College of Natural Science may complete the alternative track to Integrative Studies in Biological and Physical Sciences that is described in item 1. under the heading Graduation Requirements in the College statement. Certain courses referenced in requirement 3. below may be used to satisfy the alternative track.

2. The requirements of the College of Natural Science for the Bachelor of Science degree.

The credits earned in certain courses referenced in requirement 3. below may be counted toward College requirements as appropriate.

3. The following requirements for the major:

a. The following courses outside the Department of Mathematics: ........................................ 3
   (1) One course of at least 3 credits in biological science, entomology, microbiology, physiology, plant biology, or zoology.
   (2) One of the following groups of courses (8 or 10 credits):
      (a) CEM 141 General Chemistry ........................................... 4
      CEM 142 General and Inorganic Chemistry .................. 3
      CEM 161 Chemistry Laboratory I .................................... 1

      CEM 182H Honors Chemistry II ........................................ 4
      CEM 185H Honors Chemistry Laboratory I ....................... 1
   (3) Both of the following courses (9 credits):
      MTH 360 Theory of Mathematical Interest .................. 3
      MTH 491A Actuarial Internship .................................. 3
      (4) Both of the following courses (9 credits):
         PHY 183 Physics for Scientists and Engineers I ......... 4
         PHY 184 Physics for Scientists and Engineers II ........ 4
   b. First-year competency in a foreign language
   or
   For students, who have been admitted to the teacher certification program, first-year competency in a foreign language and completion of the Professional Education Courses in the Department of Teacher Education.
   c. The following courses in the Department of Mathematics: ........................................ 35
      (1) All of the following courses (29 credits):
         MTH 132 Calculus I ....................................................... 3
         MTH 133 Calculus II ..................................................... 4
         MTH 234 Multivariable Calculus .................................. 4
         MTH 254H Honors Multivariable Calculus ................. 3
         MTH 309 Linear Algebra ................................................ 3
         MTH 310 Abstract Algebra I and Number Theory ............ 3
         MTH 320 Analysis I ...................................................... 3
         MTH 451 Numerical Analysis I .................................. 3
         MTH 481 Discrete Mathematics I ....................... 3
         MTH 496 Capstone in Mathematics .......................... 3
         (2) One of the following courses (3 credits):
            MTH 452 Numerical Analysis II .................................. 3
            MTH 482 Discrete Mathematics II ........................... 3
            (3) One of the following courses (3 credits):
                MTH 235 Differential Equations .................................. 3
            d. At least one of the following courses: ........................................ 3
                Student s who select Mathematics 452 or 482 may count the credits toward either requirement 3.c. (2) or 3.d. but not toward both of those requirements.
                Approval of the Department of Computer Science and Engineering is required to enroll in Computer Science and Engineering 331 and 440.
                CSE 331 Algorithms and Data Structures ........................................ 3
                CSE 440 Introduction to Artificial Intelligence ..................... 3
                MTH 360 Theory of Mathematical Interest .................. 3
                MTH 415 Applied Linear Algebra .................................. 3
                MTH 416 Introduction to Algebraic Coding ............... 3
                MTH 441 Ordinary Differential Equations II ............... 3
                MTH 452 Numerical Analysis II .................................. 3
                MTH 457 Introduction to Financial Mathematics .............. 3
                MTH 472 Mathematical Logic ................................... 3
                MTH 482 Discrete Mathematics I .................................. 3
                STT 351 Probability and Statistics for Engineering ........ 3
                STT 430 Introduction to Probability and Statistics ........ 3
                STT 441 Probability and Statistics II .......................... 3
                STT 455 Actuarial Models ............................................ 3
                STT 461 Computations in Probability and Statistics ........ 3

CREDITS

27 or 29
Requirements for the Bachelor of Arts Degree in Computational Mathematics

1. The University requirements for bachelor’s degrees as described in the Undergraduate Education section of this catalog; 120 credits, including general elective credits, are required for the Bachelor of Arts degree in Computational Mathematics.

The University’s Tier II writing requirement for the Computational Mathematics major is met by completing Mathematics 309 or 310 or 496. Those courses are referenced in item 3.c.(1) below.

Students who are in the teacher certification program are required to complete Mathematics 330 or 432 and Statistics and Probability 430.

Students who are enrolled in the College of Natural Science may complete the alternative track to Integrative Studies in Biological and Physical Sciences that is described in item 1 under the heading Graduation Requirements in the College statement. Certain courses referenced in requirement 3. below may be used to satisfy the alternative track.

2. The requirements of the College of Natural Science for the Bachelor of Arts degree.

The credits earned in certain courses referenced in requirement 3. below may be counted toward College requirements as appropriate.

3. The following requirements for the major:

a. The following courses outside the Department of Mathematics: 19

(1) One course of at least 3 credits in biological science, entomology, microbiology, physiology, plant biology, or zoology.

(2) The following course (4 credits):

<table>
<thead>
<tr>
<th>Course</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>PHY 183</td>
<td>4</td>
</tr>
</tbody>
</table>

b. The following courses in the Department of Mathematics: 35

(1) All of the following courses (29 credits):

<table>
<thead>
<tr>
<th>Course</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>MTH 132</td>
<td>3</td>
</tr>
<tr>
<td>MTH 133</td>
<td>4</td>
</tr>
<tr>
<td>MTH 234</td>
<td>4</td>
</tr>
<tr>
<td>MTH 309</td>
<td>3</td>
</tr>
<tr>
<td>MTH 310</td>
<td>3</td>
</tr>
<tr>
<td>MTH 320</td>
<td>3</td>
</tr>
<tr>
<td>MTH 451</td>
<td>3</td>
</tr>
<tr>
<td>MTH 481</td>
<td>3</td>
</tr>
<tr>
<td>MTH 496</td>
<td>3</td>
</tr>
</tbody>
</table>

The completion of Mathematics 496 satisfies the capstone course requirement of the computational mathematics major. The credits earned in certain courses referenced in requirement 3. below may be counted toward College requirements as appropriate.

(2) One of the following courses (3 credits):

<table>
<thead>
<tr>
<th>Course</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>MTH 452</td>
<td>3</td>
</tr>
</tbody>
</table>

(3) One of the following courses (3 credits):

<table>
<thead>
<tr>
<th>Course</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>MTH 235</td>
<td>3</td>
</tr>
</tbody>
</table>

(4) At least one of the following courses:

<table>
<thead>
<tr>
<th>Course</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>CSE 331</td>
<td>3</td>
</tr>
</tbody>
</table>

The completion of Mathematics 496 satisfies the capstone course requirement of the computational mathematics major.

b. Second-year competency in a foreign language.

For students who have been admitted to the teacher certification program, first-year competency in a foreign language and completion of the Professional Education Courses in the Department of Teacher Education.

c. The following courses in the Department of Mathematics:

(1) One course of at least 3 credits in biological science, entomology, microbiology, physiology, plant biology, or zoology.

(2) One of the following courses (4 credits):

<table>
<thead>
<tr>
<th>Course</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>PHY 183</td>
<td>4</td>
</tr>
</tbody>
</table>

(3) One of the following courses (3 credits):

<table>
<thead>
<tr>
<th>Course</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>CSE 231</td>
<td>4</td>
</tr>
<tr>
<td>CSE 232</td>
<td>4</td>
</tr>
</tbody>
</table>

(4) Second-year competency in a foreign language.

For students who have been admitted to the teacher certification program, completion of the Professional Education Courses in the Department of Teacher Education.

c. A total of 38 credits in courses in the Department of Mathematics including:

(1) All of the following courses (17 credits):

<table>
<thead>
<tr>
<th>Course</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>MTH 132</td>
<td>3</td>
</tr>
<tr>
<td>MTH 133</td>
<td>4</td>
</tr>
<tr>
<td>MTH 234</td>
<td>4</td>
</tr>
<tr>
<td>MTH 309</td>
<td>3</td>
</tr>
<tr>
<td>MTH 310</td>
<td>3</td>
</tr>
<tr>
<td>MTH 320</td>
<td>3</td>
</tr>
<tr>
<td>MTH 451</td>
<td>3</td>
</tr>
<tr>
<td>MTH 481</td>
<td>3</td>
</tr>
<tr>
<td>MTH 496</td>
<td>3</td>
</tr>
</tbody>
</table>

The completion of Mathematics 496 satisfies the capstone course requirement. Students in the teacher certification program substitute Mathematics 396 Capstone in Mathematics for Secondary Education for Mathematics 496.

(2) A total of 24 credits in approved Mathematics courses at the 300 level or above. At least four of the approved Mathematics courses must be at the 400 level or above. Mathematics 415, 424, and 443 may not be used to fulfill the requirements of the major. The 300-400 level courses that are referenced in items 3.c. (1), 3.c. (3), 3.c. (4), and 3.e. (5) partially satisfy this requirement. Students may not use both Mathematics 309 and 314 to satisfy the requirement in 3.c.(2). One course from a list of approved cognates may be used to satisfy this requirement; the list is available in the Department of Mathematics. Statistics and Probability 430 is required for students in the teacher certification program. Either Statistics and Probability 430 or 441 may be substituted for one 300-level mathematics course.

(3) One of the following groups of courses (6 credits):

<table>
<thead>
<tr>
<th>Course</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>MTH 310</td>
<td>3</td>
</tr>
<tr>
<td>MTH 411</td>
<td>3</td>
</tr>
<tr>

Department of Mathematics

Department of Teacher Education
Undergraduate

1. The University requirements for bachelor's degrees as described in the Undergraduate Education section of this catalog; 120 credits, including general elective credits, are required for the Bachelor of Arts degree in Mathematics.

   The University's Tier II writing requirement for the Mathematics major is met by completing Mathematics 418H and 496. Those courses are referenced in items 3. (1) and 3. (3) below.

   Students who are enrolled in the College of Natural Science may complete the alternative track to Integrative Studies in Biological and Physical Sciences that is described in item 1 under the heading Graduation Requirements in the College statement. Certain courses referenced in requirement 3. below may be used to satisfy the alternative track.

2. The requirements of the College of Natural Science for the Bachelor of Arts degree.

   The credits earned in certain courses referenced in requirement 3. below may be counted toward College requirements as appropriate.

3. The following requirements for the major:

   a. The following courses outside the Department of Mathematics:

      (1) One course at least 3 credits in biological science, entomology, microbiology, physiology, plant biology, or zoology.

      (2) The following course (4 credits):

         PHY 183 Physics for Scientists and Engineers I ........... 4

      (3) One of the following courses (4 credits):

         CEM 141 General Chemistry ......................... 4
         CEM 181H Honors Chemistry I ..................... 4

   b. Second-year competency in a foreign language or

      or

      For students who have been admitted to the teacher certification program, first-year competency in a foreign language and completion of the Professional Education Courses in the Department of Teacher Education.

   c. A total of 38 credits in courses in the Department of Mathematics including:

      (1) All of the following courses (17 credits):

         MTH 132 Calculus I ............................. 3
         MTH 133 Calculus II ............................ 4
         MTH 234 Multivariable Calculus ................... 4
         MTH 309 Linear Algebra I ....................... 3
         MTH 496 Capstone in Mathematics ................. 3

         The completion of Mathematics 496 fulfills the department's capstone course requirement.

         Students in the teacher certification program substitute Mathematics 396 Capstone in Mathematics for Secondary Education for Mathematics 496.

      (2) A total of 24 credits in approved Mathematics courses at the 300–level or above. At least 4 of the approved Mathematics courses must be at the 400–level or above. Mathematics 415, 424, and 443 may not be used to fulfill the requirements of the major. The 300-400 level courses that are referenced in items 3. (c) (1), 3. c. (3), 3. c. (4) and 3. c. (5) partially satisfy this requirement. Students may not use both Mathematics 309 and 314 to satisfy this requirement in 3. (c) (2).

      One course from a list of approved cognates may be used to satisfy this requirement; the list is available in the Department of Mathematics. Students are required to complete 403 as an alternative to Statistics or Probability 430 or 441. Either Statistics and Probability 430 or 441 may be substituted for one 300-level mathematics course.

      (3) One of the following groups of courses (6 credits):

         (a) MTH 310 Abstract Algebra I and

         Number Theory .................................. 3
         MTH 411 Abstract Algebra II ....................... 3

         Mathematics 414 or 417 or 418H or 481 may be substituted for Mathematics 411.

         (b) MTH 418 Honors Algebra I ..................... 3
         MTH 419 Honors Algebra II ......................... 3

      (4) One of the following pairs of courses (6 credits):

         (a) MTH 320 Analysis I ........................... 3
         MTH 421 Analysis II ............................. 3

         Mathematics 423 or 441 or 442 may be substituted for Mathematics 421.

         (b) MTH 428H Honors Analysis I ................... 3
         MTH 429H Honors Analysis II ..................... 3

      (5) One of the following courses (3 credits):

         MTH 330 Higher Geometry ......................... 3
         MTH 340 Ordinary Differential Equations I ....... 3
         MTH 432 Complex Analysis ......................... 3

         Students in the teacher certification program must take either Mathematics 330 or 432. Students not in the teacher certification program must take Mathematics 340. Students not in the teacher certification program must take prior credit in Mathematics 235 or 255H in Mathematics 340.

Graduation Requirements

1. The University requirements for bachelor’s degrees as described in the Undergraduate Education section of this catalog; 120 credits, including general elective credits, are required for the Bachelor of Science degree in Mathematics, Advanced.

   The University’s Tier II writing requirement for the Mathematics, Advanced major is met by completing Mathematics 418H and 496. Those courses are referenced in item 3. below.

   Students who are enrolled in the College of Natural Science may complete the alternative track to Integrative Studies in Biological and Physical Sciences that is described in item 1 under the heading Graduation Requirements in the College statement. Certain courses referenced in requirement 3. below may be used to satisfy the alternative track.

2. The requirements of the College of Natural Science for the Bachelor of Science degree.

   The credits earned in certain courses referenced in requirement 3. below may be counted toward College requirements as appropriate.

3. The following requirements for the major:

   a. The following courses outside the Department of Mathematics

      (17 to 21 credits):

      (1) One course at least 3 credits in biological science, entomology, microbiology, physiology, plant biology, or zoology.

      (2) One of the following groups of courses (6 or 8 credits):

         (a) CEM 141 General Chemistry ..................... 4
         CEM 181H Honors Chemistry I ..................... 4

         (b) CEM 151 General and Descriptive Chemistry .... 4
         CEM 152 Principles of Chemistry .................... 3

         (c) CEM 181H Honors Chemistry I ..................... 4
         CEM 182H Honors Chemistry II .................... 4

         (d) LB 171 Principles of Chemistry ................... 4
         LB 172 Principles of Chemistry ..................... 3

         (e) LB 271 Physics I ................................ 3
         LB 272 Physics II .................................. 3

      (3) One of the following groups of courses (6 or 8 credits):

         (a) PHY 183 Physics for Scientists and Engineers I .... 4
         PHY 184 Physics for Scientists and Engineers II .... 4

         (b) PHY 193H Honors Physics I – Mechanics ....... 3
         PHY 294H Honors Physics II – Electromagnetism .... 3

         (c) LB 271 Physics I ................................ 3
         LB 272 Physics II .................................. 3

   b. First-year competency in a foreign language or

      For students who have been admitted to the teacher certification program, completion of the Professional Education Courses in the Department of Teacher Education.

   c. A total of 34 to 37 credits in courses in the Department of Mathematics including:

      (1) One of the following courses (3 or 4 credits):

         MTH 132 Calculus I ............................. 3
         MTH 152H Honors Calculus I ..................... 4

      (2) One of the following courses (3 or 4 credits):

         MTH 133 Calculus II ............................. 4
         MTH 153H Honors Calculus II ..................... 4

      (3) One of the following courses (3 or 4 credits):

         MTH 234 Multivariable Calculus ................... 4
         MTH 254H Honors Multivariable Calculus ......... 3

         (d) LB 220 Calculus III ............................. 4

      (4) All of the following courses (25 credits):

         MTH 291 Mathematics Snapshots ................... 1
         MTH 317H Advanced Linear Algebra ................ 3
         MTH 327H Introduction to Advanced Analysis ...... 3
         MTH 347H Advanced Ordinary Differential Equations .... 3
         MTH 418H Honors Algebra I ......................... 3
         MTH 419H Honors Algebra II ........................ 3
         MTH 428H Honors Analysis I ........................ 3
         MTH 429H Honors Analysis II ........................ 3

         (c) MTH 496 Capstone in Mathematics ................. 3

         The completion of Mathematics 496 fulfills the department's capstone course requirement.

   d. A total of 12 credits in approved courses with substantive high-level quantitative material at the 400-level or above. Up to 9 of these 12 credits may be satisfied by courses in departments other than Mathematics as approved by the student's academic advisor. Students in the teacher certification program must take Mathematics 432 to fulfill part of this elective requirement. Students in the teacher certification program must also take STT 430 which may not be counted as part of this requirement.
MINOR IN MATHEMATICS

The Minor in Mathematics, which is administered by the Department of Mathematics, will broaden students’ understanding and application of mathematical concepts to their chosen field of study. The minor is available as an elective to students who are enrolled in bachelor’s degree programs at Michigan State University other than the Bachelor of Arts and Bachelor of Science Degree in Mathematics. With the approval of the department and college that administer the student’s degree program, the courses that are used to satisfy the minor may also be used to satisfy the requirements for the bachelor’s degree. At least 12 unique credits counted towards the requirements for a student’s minor must not be used to fulfill the requirements for that student’s major.

Students who plan to complete the requirements of the minor should consult the undergraduate advisor in the Department of Mathematics.

Requirements for the Minor in Mathematics

Complete the following (21 to 24 credits):

1. One of the following courses (3 or 4 credits):
   - LB 118 Calculus I ...................................... 4
   - MTH 132 Calculus I ..................................... 3
   - MTH 152H Honors Calculus I .......................... 3

2. One of the following courses (3 or 4 credits):
   - LB 119 Calculus II ..................................... 4
   - MTH 133 Calculus II .................................... 4
   - MTH 153H Honors Calculus II ......................... 3

3. One of the following courses (3 or 4 credits):
   - LB 220 Calculus III .................................... 4
   - MTH 234 Multivariable Calculus ...................... 4
   - MTH 254H Honors Multivariable Calculus ............ 3

4. All of the following courses (12 credits):
   - MTH 309 Linear Algebra I ............................ 3
   - MTH 310 Abstract Algebra I and Number Theory .... 3
   - MTH 320 Analysis I .................................... 3
   - One 400-level mathematics course ................... 3

SPECIALIZATION IN ACTUARIAL SCIENCE

The Specialization in Actuarial Science, which is administered by the Department of Mathematics within the College of Natural Science, is available as an elective to students who are enrolled in any bachelor’s degree program at Michigan State University. This specialization complements a number of major fields such as mathematics, statistics and probability, finance, and economics. It is intended to prepare students for work in insurance companies, banks, investment firms, government work, hospitals and business firms where there is a need to weigh the financial consequences of risk. The Specialization in Actuarial Science prepares students for two of the examinations of the Society of Actuaries (SOA): Exam P/1 and Exam FM/2. With the approval of the department that administers the student’s degree program, the courses that are used to satisfy the requirements for the specialization may also be used to satisfy the requirements for the bachelor’s degree.

Requirements for the Specialization in Actuarial Science

The student must complete all of the following courses (21 credits):

1. All of the following courses (18 credits):
   - FI 311 Financial Management ........................ 3
   - FI 321 Theory of Investments .......................... 3
   - FI 379 Advanced Derivatives (D) ....................... 3
   - MTH 360 Theory of Mathematical Interest .......... 3
   - STT 44I Probability and Statistics I: Probability ... 3
   - STT 455 Actuarial Models ............................. 3

2. One of the following courses (3 credits):
   - MTH 457 Introduction to Financial Mathematics .... 3
   - STT 442 Probability and Statistics II: Statistics 3

Upon completion of the requirements for the Specialization in Actuarial Science, the students should contact the Chairperson of the Department of Mathematics and request certification for the completion of the specialization. After the certification is approved by the Chairperson of the Department of Mathematics and the Associate Dean of the College of Natural Science, the Office of the Registrar will enter on the student’s academic record the name of the specialization and the date that it was completed. This certification will appear on the student’s transcript.

TEACHER CERTIFICATION OPTIONS

The mathematics disciplinary majors leading to the Bachelor of Arts and Bachelor of Science degrees are available for teacher certification. The mathematics, advanced major leading to the Bachelor of Science degree is also available for secondary teacher certification.

A mathematics-elementary and mathematics-secondary disciplinary minor are also available for teacher certification.

Students who elect a mathematics or mathematics, advanced disciplinary major or the mathematics-elementary or mathematics-secondary disciplinary minor must contact the Department of Mathematics.

For additional information, refer to the statement on TEACHER CERTIFICATION in the Department of Teacher Education section of this catalog.

GRADUATE STUDY

The Department of Mathematics offers graduate work leading to the degrees of Master of Science in Mathematics, Applied Mathematics, and Industrial Mathematics, and Master of Arts for Teachers. The Department also offers graduate work leading to the degrees of Doctor of Philosophy in Mathematics, and Applied Mathematics.

APPLIED MATHEMATICS

Master of Science

In addition to meeting the requirements of the university and of the College of Natural Science, students must meet the requirements specified below.

Admission

To be admitted to the Master of Science degree program in applied mathematics, a person should have completed (1) the mathematics or applied mathematics courses normally required for the bachelor’s degree with a major in mathematics, physics, or engineering, (2) a minimum of a year’s work in mathematical analysis at the senior year level, and (3) courses in matrices and linear algebra.

Requirements for the Master of Science Degree in Applied Mathematics

The student must complete a total of 30 credits for the degree under Plan B (without thesis). The student’s program of study must be approved by the student’s academic advisor and must include:

1. At least 24 credits in mathematics courses including:
   a. At least 6 credits from the following courses: Mathematics 818, 819, 828, 829, 848, 849, 868, 869.
   b. At least 12 credits in 800–level applied mathematics courses including 6 credits in one of the following groups...
of courses: Mathematics 841, 842; 848, 849; 850, 851; or 880, 881.
The completion of Mathematics 848 and 849 may be used to satisfy either the requirement referenced in item 1 a. or the requirement referenced in item 1 b., but not both of those requirements.

2. At least 18 credits in 800–900 level courses.

**Doctor of Philosophy**

In addition to meeting the requirements of the university and of the College of Natural Science, students must meet the requirements specified below.

**Admission**

Regular admission to the Doctor of Philosophy degree program in applied mathematics presupposes academic preparation equivalent to a Master of Science degree in mathematics with a grade–point average of 3.00 or better. However, a student with a bachelor’s degree whose undergraduate preparation is strong may be admitted directly to the program upon passing a qualifying examination.

**Requirements for the Doctor of Philosophy Degree in Applied Mathematics**

The student must:
1. Pass the qualifying examination.
2. Complete at least 30 credits in approved 800–900 level mathematics courses excluding courses taken in preparation for the qualifying examination and Mathematics 999; at least 18 of the 30 credits must be in applied mathematics courses.
3. Present at least two seminars acceptable to the faculty.
4. Pass the comprehensive examination.
5. Demonstrate a reading knowledge of one foreign language, normally from among French, German, and Russian, sufficient to read the mathematical literature written in that language.

For detailed information regarding the qualifying and comprehensive examinations, contact the Department of Mathematics.

**INDUSTRIAL MATHEMATICS**

**Master of Science**

The degree of Master of Science in Industrial Mathematics is designed to produce generalized problem solvers of great versatility, capable of moving within an organization from task to task. The graduate will have acquired not only the standard mathematical and statistical tools, but also the basic ideas of engineering and business, and will have received training in project development and in modes of industrial communication. The program is for students planning careers in business, government or industry.

**Admission**

To be admitted to the Master of Science in Industrial Mathematics program, a person should have completed (1) the mathematics or applied mathematics courses normally required for the bachelor’s degree with a major in mathematics, physics or engineering, (2) courses at the senior level in mathematical analysis, linear algebra and differential equations, and (3) have some familiarity with mathematical software programs such as Mathematica, Matlab, etc.

Students entering the program are expected to have a mathematical preparation at the level of Mathematics 421, 414 and 442. Students with deficiencies may be required to take additional credits.

**Requirements for the Master of Science Degree in Industrial Mathematics**

In addition to meeting the requirements of the University and the College of Natural Science, the student must complete a total of 36 credits for the degree under Plan B (without thesis). The student’s program of study must be approved by the student’s academic advisor, including:

1. The following requirements for the major: .......................... 36
   a. Both of the following courses:
      MTH 843 Survey of Industrial Mathematics .......... 3
      MTH 844 Projects in Industrial Mathematics ......... 3
   b. A minimum of four of the following courses:
      MTH 810 Error-Correcting Codes .................... 3
      MTH 841 Boundary Value Problems I ................. 3
      MTH 842 Boundary Value Problems II ............... 3
      MTH 848 Ordinary Differential Equations .......... 3
      MTH 849 Partial Differential Equations ............. 3
      MTH 850 Numerical Analysis I .................... 3
      MTH 851 Numerical Analysis II ..................... 3
      MTH 852 Numerical Methods for Ordinary
          Differential Equations .......................... 3
      MTH 880 Combinatorics ................................ 3
      MTH 881 Graph Theory .................................. 3
   c. A minimum of two of the following courses:
      STT 461 Computations in Probability and Statistics .. 3
      STT 801 Design of Experiments ...................... 3
      STT 844 Time Series Analysis .......................... 3
      STT 861 Theory of Probability and
          Statistics I ........................................ 3
      STT 862 Theory of Probability and
          Statistics II ....................................... 3
   d. At least four of the following courses:
      CE 810 Reliability-Based Design in Civil
          Engineering ........................................ 3
      CE 841 Traffic Flow Theory .......................... 3
      CSE 802 Pattern Recognition and Analysis ............ 4
      CSE 803 Computer Vision ............................. 3
      CSE 830 Design and Theory of Algorithms .......... 3
      CSE 835 Algorithmic Graph Theory ................... 3
      EC 811B The Structure of Economic Analysis ......... 3
      EC 812A Microeconomics I ........................... 3
      EC 812B Microeconomics II .......................... 3
      EC 813A Macroeconomics I ........................... 3
      EC 813B Macroeconomics II .......................... 3
      EC 820A Econometrics IA ............................ 3
      EC 820B Econometrics IB ............................. 3
      ECE 466 Digital Signal Processing and Filter Design .. 3
      ECE 826 Linear Control Systems ........................ 3
      ENE 801 Dynamics of Environmental Systems ........ 3
      ME 423 Intermediate Mechanics of Deformable
          Solids .............................................. 3
      ME 451 Control Systems ................................ 4
      ME 820 Continuum Mechanics .......................... 3
      ME 821 Linear Elasticity ................................ 3
      ME 860 Theory of Vibrations .......................... 3
      ME 863 Nonlinear Vibrations .......................... 3
      ME 872 Finite Element Method ....................... 3
      MSE 426 Introduction to Composite Materials ......... 3
      MSE 865 Advanced Theory of Solids ................... 3
   e. Completion of a Certificate in Program Management. This
      requires completion of PHM 857 Project Management, covering
      such topics as formal project management culture, principles,
      knowledge areas, and terminology. It will normally be undertaken
      during the first year of enrollment with the opportunity to use the
      credit-no credit grading system. Certification will also require par-
      ticipation in Industrial Mathematics-specific discussion sessions.
      After the completion of the certificate program is approved by the
      instructors, the Industrial Mathematics Program, and the Associ-
      ate Dean of the College of Natural Science, the Office of the Reg-
      istrar will enter on the student’s academic record the name of the
      certificate program and the date it was completed. This certifica-
      tion will appear on the student’s transcript upon completion of the
      requirements for the degree program.

**MATHEMATICS**

**Master of Arts for Teachers**

In addition to meeting the requirements of the university and of the College of Natural Science, students must meet the requirements specified below.
Admission
To be admitted to the Master of Arts for Teachers degree program in mathematics, a person should have (1) at least one year of calculus and (2) at least 10 credits of acceptable junior and senior mathematics courses. Normally these 10 credits should include courses in advanced calculus and modern algebra. The candidate should also possess, or be a candidate for, teacher certification.

Requirements for the Master of Arts for Teachers Degree in Mathematics
The student must complete a total of 30 credits for the degree under Plan B (without thesis). The student's program of study must be approved by the student's academic advisor and must include:
1. At least 9 credits from the following courses: Mathematics 801, 802A, 802B, and 903.
2. At least 15 additional credits in mathematics or statistics courses including one course sequence, such as algebra or discrete mathematics, from a list of approved courses that is available in the Department of Mathematics.
3. Course work in each of the following five areas of mathematics: geometry, algebra, analysis, discrete mathematics, and probability and statistics. Courses completed while enrolled in a bachelor's degree program may be used to satisfy this requirement.

Master of Science
In addition to meeting the requirements of the university and of the College of Natural Science, students must meet the requirements specified below.

Admission
To be admitted to the Master of Science degree program in mathematics, a person should have (1) at least one year of calculus and (2) at least 10 credits of acceptable junior and senior mathematics courses. Normally these 10 credits should include courses in advanced calculus and modern algebra.

Requirements for the Master of Science Degree in Mathematics
The student must complete a total of 30 credits for the degree under Plan B (without thesis). The student's program of study must be approved by the student's academic advisor and must include:
1. At least 24 credits in mathematics courses including at least 6 credits from the following courses: Mathematics 818, 819, 828, 829, 848, 849, 868, 869.
2. At least 18 credits in 800–900 level courses.

Doctor of Philosophy
In addition to meeting the requirements of the university and of the College of Natural Science, students must meet the requirements specified below.

Admission
Regular admission to the Doctor of Philosophy degree program in mathematics presupposes academic preparation equivalent to a Master of Science degree with a major in mathematics with a grade–point average of 3.00 or better. However, a student with a bachelor's degree whose undergraduate preparation is strong may be admitted directly to the program upon passing a qualifying examination.

Requirements for the Doctor of Philosophy Degree in Mathematics
The student must:
1. Pass the qualifying examination.
2. Complete at least 30 credits in approved 800–900 level mathematics courses excluding courses taken in preparation for the qualifying examination and Mathematics 999.
3. Present at least two seminars acceptable to the faculty.
4. Pass the comprehensive examination.
5. Demonstrate a reading knowledge of one foreign language, normally from among French, German, and Russian, sufficient to read the mathematical literature written in that language.

For detailed information regarding the qualifying and comprehensive examinations, contact the Department of Mathematics.

DEPARTMENT of MICROBIOLOGY and MOLECULAR GENETICS

Walter Esselman, Chairperson

The Department of Microbiology and Molecular Genetics is administered jointly by the colleges of Natural Science, Human Medicine, Osteopathic Medicine, and Veterinary Medicine.

Microbiology involves the study of microscopic organisms: bacteria, viruses, algae, fungi, and protozoa, as well as research on the interaction of pathogenic and beneficial microbes with their hosts.

Molecular genetics and genomics includes study of the basis of heredity and the mechanisms by which genes exert their effects as well as genetic engineering and gene manipulation. Much of this study originates in microbial systems or employs microbiology-based technologies but can be applied to larger organisms as well.

Every area of modern biology incorporates aspects of microbiology. Microbes are not only key players in disease, industrial processes, and the environment, but some of them are also among the most intensively studied model systems in all of biological science.

The microbiologist today may specialize in one or more of the diverse aspects of the science. At the undergraduate level, students may pursue their interests by completing a course of study leading to a bachelor's degree in microbiology, genomics and molecular genetics, or environmental biology/microbiology.

Employment opportunities for microbiologists and molecular geneticists exist at all levels of education. Careers are available as teachers and researchers in universities and institutes, and as scientists in a variety of governmental, medical, and industrial laboratories.

Because the programs in microbiology or molecular genetics offer a broad overview of biology, they are excellent choices for students who are interested in fundamental and applied biological science and also for students who plan to apply for admission to graduate professional programs, such as human or veterinary medicine.
Students who are enrolled in bachelor’s degree programs in the Department of Microbiology and Molecular Genetics may elect the Specialization in Food Processing and Technology. For additional information, refer to the Specialization in Food Processing and Technology statement in the Department of Food Science and Human Nutrition section of this catalog.

The Department of Microbiology and Molecular Genetics also participates in the joint bachelor’s degree/master’s degree of the College of Natural Science. For additional information, refer to the College of Natural Science Dual Degree Program: Bachelor of Science and Master of Science section of this catalog.

UNDERGRADUATE PROGRAMS

ENVIRONMENTAL BIOLOGY/MICROBIOLOGY

Environmental microbiology is a large and diverse field that addresses concerns such as soil fertility, water purity and quality, and safety of the food supply. Although environmental biology is concerned with all members of the biosphere and the geochemical surroundings, microorganisms are at the heart of the biological activities in the environment. Many of the environmental problems facing society are microbial ones, or ones for which microbial solutions may be found.

The Bachelor of Science degree program with a major in environmental biology/microbiology is designed for students who plan to pursue careers involving microbiology and the environment or who plan to pursue graduate study in microbiology and related environmental areas.

The educational objectives of the program are to:

1. Help students to acquire knowledge of microbiology and related environmental areas.
2. Prepare students to solve problems in environmental microbiology.

On completion of the program, the graduate may apply for certification with the National Registry of Microbiologists of the American Society for Microbiology.

Requirements for the Bachelor of Science Degree in Environmental Biology/Microbiology

1. The University requirements for bachelor’s degrees as described in the Undergraduate Education section of this catalog; 120 credits, including general elective credits, are required for the Bachelor of Science degree in Environmental Biology/Microbiology.

   The University’s Tier II writing requirement for the Environmental Biology/Microbiology major is met by completing Microbiology 408. That course is referenced in item 3.b.(1) below.

   Students who are enrolled in the College of Natural Science may complete the alternate environmental areas.

2. The requirements of the College of Natural Science for the Bachelor of Science degree are 120 credits, including general elective credits, are required for the Bachelor of Science degree in Environmental Biology/Microbiology.

3. The following courses outside the Department of Microbiology are counted toward College requirements as appropriate.

   - One of the following courses (6 credits):
     - BMB 461 Biochemistry I ........................................... 3
     - BMB 462 Biochemistry II ........................................ 3
     - BMB 401 Basic Biochemistry ...................................... 4

   - One of the following courses (58 credits):
     - BS 110 Organisms and Populations ................................ 4
     - BS 111 Cells and Molecules ........................................ 3
     - BS 111L Cell and Molecular Biology Laboratory ............ 2
     - CE 280 Principles of Environmental Engineering and Science ........................................... 2
     - CEM 141 General Chemistry ...................................... 4
     - CEM 142 General and Inorganic Chemistry ...................... 3
     - CEM 161 Chemistry Laboratory I .................................. 1
     - CEM 162 Chemistry Laboratory II ................................ 1

   - One of the following options (3 credits):
     - MMG 491 Current Topics in Microbiology and Molecular Genetics ........................................... 3
     - MMG 492 Undergraduate Research Seminar .................. 1

   The completion of either of these two options fulfills the department’s capstone course requirement.

   - Six credits from the following areas (6 credits):
     - CSS 455 Pollutants in the Soil Environment .................. 3
     - FOR 404 Forest Ecology ............................................ 3
     - FSC 440 Food Microbiology ....................................... 3
     - GEO 206 Physical Geography ..................................... 3
     - GEO 221 Introduction to Geographic Information .......... 3
     - MMG 426 Biogeochernistry ...................................... 3
     - MMG 445 Microbial Biotechnology (W) .......................... 3
     - ZOL 446 Environmental Issues and Public Policy ............ 3

GENOMICS AND MOLECULAR GENETICS

The objective of the Bachelor of Science degree program with a major in genomics and molecular genetics is to provide a broad foundation in science, with emphasis in genomics and molecular genetics. Although the majority of the course work is prescribed, students have an opportunity to tailor their degree program to their own interests within the field by choosing a suitable course combination from a slate of options. On completion of the program, students are encouraged to participate in mentored independent research for at least two, and ideally three or more, semesters. Independent research is available to both Honors College and other students, and often culminates with a report written in manuscript style by the student. This research may fulfill part of the department’s capstone course requirement for the bachelor’s degree with a major in genomics and molecular genetics.

Requirements for the Bachelor of Science Degree in Genomics and Molecular Genetics

1. The University requirements for bachelor’s degrees as described in the Undergraduate Education section of this catalog; 120 credits, including general elective credits, are required for the Bachelor of Science degree in Genomics and Molecular Genetics.

   The University’s Tier II writing requirement for the Genomics and Molecular Genetics major is met by completing Microbiology 434. That course is referenced in item 3.b. (2) below.

   - One of the following courses (6 credits):
     - CEM 251 Organic Chemistry I .................................. 3
     - CEM 252 Organic Chemistry II .................................. 3
     - CEM 255 Organic Chemistry Laboratory ....................... 2
     - CSS 210 Fundamentals of Soil Science ......................... 3
     - GLG 201 The Dynamic Earth .................................... 4
     - GLG 421 Environmental Geochemistry ......................... 4
     - MTH 132 Calculus I .............................................. 3
     - PHY 231 Introductory Physics I ................................ 3
     - PHY 232 Introductory Physics II ................................ 3
     - PHY 251 Introductory Physics Laboratory I .................. 1
     - PHY 252 Introductory Physics Laboratory II .................. 1
     - STT 231 Statistics for Scientists ................................ 3
     - ZOL 355 Ecology .............................................. 1
     - ZOL 355L Ecology Laboratory ................................... 1

   - Six credits from the following areas (6 credits):
     - CE 280 Principles of Environmental Engineering and Science ........................................... 2
     - CEM 141 General Chemistry ...................................... 4
     - CEM 142 General and Inorganic Chemistry ...................... 3
     - CEM 161 Chemistry Laboratory I .................................. 1
     - CEM 162 Chemistry Laboratory II ................................ 1

   - One of the following options (3 credits):
     - MMG 491 Current Topics in Microbiology and Molecular Genetics ........................................... 3
     - MMG 492 Undergraduate Research Seminar .................. 1

   The completion of either of these two options fulfills the department’s capstone course requirement.

   - One course from the following areas (6 credits):
     - CSS 455 Pollutants in the Soil Environment .................. 3
     - FOR 404 Forest Ecology ............................................ 3
     - FSC 440 Food Microbiology ....................................... 3
     - GEO 206 Physical Geography ..................................... 3
     - GEO 221 Introduction to Geographic Information .......... 3
     - MMG 426 Biogeochernistry ...................................... 3
     - MMG 445 Microbial Biotechnology (W) .......................... 3
     - ZOL 446 Environmental Issues and Public Policy ............ 3

   - Six credits from the following areas (6 credits):
     - CEM 251 Organic Chemistry I .................................. 3
     - CEM 252 Organic Chemistry II .................................. 3
     - CEM 255 Organic Chemistry Laboratory ....................... 2
     - CSS 210 Fundamentals of Soil Science ......................... 3
     - GLG 201 The Dynamic Earth .................................... 4
     - GLG 421 Environmental Geochemistry ......................... 4
     - MTH 132 Calculus I .............................................. 3
     - PHY 231 Introductory Physics I ................................ 3
     - PHY 232 Introductory Physics II ................................ 3
     - PHY 251 Introductory Physics Laboratory I .................. 1
     - PHY 252 Introductory Physics Laboratory II .................. 1
     - STT 231 Statistics for Scientists ................................ 3
     - ZOL 355 Ecology .............................................. 1
     - ZOL 355L Ecology Laboratory ................................... 1

   - One of the following options (3 credits):
     - MMG 491 Current Topics in Microbiology and Molecular Genetics ........................................... 3
     - MMG 492 Undergraduate Research Seminar .................. 1
Students who are enrolled in the College of Natural Science may complete the alternate track to Integrative Studies in Biological and Physical Sciences that is described under the heading Graduation Requirements in the College statement. Certain courses referenced in requirement 3. below may be used to satisfy the alternative track.

2. The requirements of the College of Natural Science for the Bachelor of Science degree.

The credits earned in certain courses referenced in requirement 3. below may be counted toward College requirements as appropriate.

3. The following requirements for the major:

GRADUATE STUDY

The Department of Microbiology and Molecular Genetics is administered jointly by the colleges of Natural Science, Human Medicine, Osteopathic Medicine, and Veterinary Medicine. Study for the Master of Science degree in microbiology and molecular genetics or the Doctor of Philosophy degree in microbiology and molecular genetics may be administered by any one of the four colleges referenced above. Study for the Doctor of Philosophy degree with a major in microbiology—environmental toxicology is administered by the College of Veterinary Medicine.

The Department of Microbiology and Molecular Genetics is affiliated with the Doctor of Philosophy degree program with a major in ecology, evolutionary biology and behavior. For information about a Doctor of Philosophy degree program that involves ecology, evolutionary biology and behavior and a major in the Department of Microbiology and Molecular Genetics, refer to the statement on the specialization in the College of Veterinary Medicine section of this catalog.

MICROBIOLOGY and MOLECULAR GENETICS

In general, qualified students will be admitted to graduate study leading directly to the Ph.D. degree in microbiology and molecular genetics. Students who are enrolled in the professional programs in the colleges of Human Medicine, Osteopathic Medicine, and Veterinary Medicine, or in professional programs in other colleges, may pursue a graduate degree in microbiology and molecular genetics concurrently.

The objective of the graduate programs in microbiology and molecular genetics is to provide basic education in various subspecialties of microbiology and intensive research experience in specialty areas relative to the student’s interest. In the master’s program, students extend their comprehension of microbiology and cognate science through advanced course work, seminars, and research. The Doctor of Philosophy is a research–oriented degree; the emphasis is placed on original research, and the aim is to enable the student to become a self–educating and creative scholar. Facilities and opportunities are also available for post-doctoral associates. Financial subsidy is available for qualified applicants.

A new graduate student in microbiology and molecular genetics is advised by the Director of Graduate Studies until a major professor is chosen. This choice should be made by the end of the second semester of enrollment in the program. The major professor assists the student in selecting a guidance committee. The committee helps the student in planning a program of study. The program must be approved by the end of the third semester of enrollment in the program. A Manual for Graduate Study in Microbiology and Molecular Genetics is available from the department. This manual contains a philosophy of graduate education and information about the department’s master’s and doctoral degree programs and related procedures.

Several members of the faculty of the Department of Microbiology and Molecular Genetics are appointed jointly in other departments or are affiliated with the NSF Science and Technology Center for Microbial Ecology or with the Michigan Biotechnology Institute. Some members of the faculty contribute to interdepartmental graduate programs of study.

Scheduled courses and research are offered at the W. K. Kellogg Biological Station located at Gull Lake, near Battle Creek.

Master of Science

Most students admitted to the M.S. program in microbiology and molecular genetics have the Ph.D. degree as their eventual goal. In addition to meeting the requirements of the university and of the College of Natural Science, Human Medicine, Osteopathic Medicine, or Veterinary Medicine, students must meet the requirements specified below.

Admission

In general, applicants should have had the equivalent of an academic year each of physics, inorganic chemistry, and organic chemistry; one biochemistry course; mathematics through integral calculus; and one or more courses in the biological sciences. Applicants should have proficiency in written and spoken English, a minimum grade–point average of 3.00, and grades of 3.0 or above in science and mathematics courses. Scores on the Graduate Record Examination General Test and a personal letter of professional intent and objectives are required. Although preparation in the fundamentals of microbiology is desirable, interested
students with degrees in any of the physical or biological sciences or mathematics are invited to apply for admission to the program. Applicants not possessing all of the requirements may be admitted to the program provisionally and permitted to make up deficiencies on a collateral basis.

Requirements for the Master of Science Degree in Microbiology and Molecular Genetics

The student must complete 30 credits under Plan A (with thesis). At least 5 credits of master's thesis research are required. The final oral examination, which covers both course work and thesis research, is administered by the student's guidance committee and a representative of the department Graduate Committee. The examining committee recommends a grade for the thesis research and the advisability of further graduate study. All master's students are required to participate in laboratory teaching, and are expected to attend departmental seminars.

Doctor of Philosophy

In addition to meeting the requirements of the university and of the College of Natural Science, Human Medicine, Osteopathic Medicine, or Veterinary Medicine, students must meet the requirements specified below.

Admission

A student may apply for admission to the doctoral program in Microbiology and Molecular Genetics when the individual is about to earn or has earned a Bachelor of Science, Bachelor of Arts, Master of Science, or a professional medical degree. In general, applicants should have had the equivalent of an academic year each of physics, inorganic chemistry, and organic chemistry; one biochemistry course; mathematics through integral calculus; and one or more courses in the biological sciences. Applicants should have proficiency in written and spoken English, a minimum grade–point average of 3.00, and grades of 3.0 or above in science courses. Students with degrees in any of the physical or biological sciences or mathematics are invited to apply for admission to the program. Applicants not possessing all of the requirements may be admitted to the program provisionally and permitted to make up deficiencies on a collateral basis.

Requirements for the Doctor of Philosophy Degree in Microbiology and Molecular Genetics

The student must:

1. Complete a minimum of four graduate courses (excluding topics and seminar courses) covering the areas of genetics, microbiology, and biochemistry. At least two of these courses must be offered by the Department of Microbiology and Molecular Genetics.

2. Complete five graduate seminar courses, each of which involves an oral presentation by the student.

3. Complete at least two, and preferably three, rotations in the laboratories of different faculty members in the Department of Microbiology and Molecular Genetics. This requirement must be completed by the end of the first calendar year of enrollment in the program.

4. Pass the preliminary examination, which involves an oral defense of the research proposal. This examination is normally given at the end of the second year of enrollment in the program.

5. Submit a dissertation and a publishable manuscript, based on original research and representing a new and significant contribution to knowledge. All doctoral students in microbiology and molecular genetics are required to participate in laboratory teaching, and are expected to attend departmental seminars.

Academic Standards

Failure to pass the preliminary examination will result in dismissal from the program.

MICROBIOLOGY—ENVIRONMENTAL TOXICOLOGY

Doctor of Philosophy

For information about the Doctor of Philosophy degree program in microbiology—environmental toxicology, refer to the statement on Multidisciplinary Doctoral Programs in Environmental Toxicology in the Graduate Education section of this catalog.

DEPARTMENT of PHYSICS and ASTRONOMY

Wolfgang W. Bauer, Chairperson

Physics is the study of the physical universe. By means of observation, experiment, theoretical constructions and computer simulations, this science attempts to find the principles, which describe that universe. Among the topics of physics are motion and force, energy, sound, electricity and magnetism, light, atomic and nuclear structure, nuclear reactions, properties of condensed matter, the elementary particles and their interactions, and particle accelerators. A study of physics provides the basic understanding of nature, and develops the analytical skills, which are essential for progress in science and technology, e.g., conducting scientific research, solving environmental problems, advancing biomedical systems, and inventing cutting-edge technology of the 21st century.

Astronomy is the study of the universe beyond the earth. The laws of physics, as they are known from laboratory experiments, are applied to stars, interstellar gas, galaxies, and space itself in an attempt to understand the detailed physical states of these entities. Astrophysics frequently involves a study of matter under extreme conditions that cannot be duplicated in the laboratory; from this point of view the universe becomes a laboratory in which naturally occurring phenomena subject matter to very large ranges of physical parameters. Cosmology, a branch of physics and astronomy, attempts to use theory and current observations to comprehend the history and evolution of the universe.

The department offers diverse courses in physics and astronomy. Undergraduate programs with different emphases may be planned through an appropriate choice of electives from the departmental courses. Other interests may be pursued by concentrating the electives in mathematics, chemistry, biology, computer science, or other branches of science or engineering.
UNDERGRADUATE PROGRAMS

Bachelor of Science

PHYSICS

The Bachelor of Science degree with a major in physics is designed to provide a thorough foundation in the field of physics together with considerable background in mathematics and a balanced program in the liberal arts. It is designed for those with an interest in:

a. Graduate Study. Within the requirements listed below, the student's electives should emphasize theory in such areas as electricity and magnetism, quantum mechanics, additional mathematics, and computer programming.

b. Experimental Physics as a preparation for positions in government and industry. Students taking this program have an opportunity to obtain a basic background in mechanics, electricity and electronics, thermodynamics, optics, and modern physics. They will also have an opportunity to acquire strong experimental training in at least two and probably three of the following areas: electronics, modern optics, nuclear physics, and solid state (materials) physics. Computer programming courses and experience are strongly recommended.

Recommended programs of study are available in a Department of Physics and Astronomy brochure.

Requirements for the Bachelor of Science Degree in Physics

1. The University requirements for bachelor's degrees as described in the Undergraduate Education section of this catalog; 120 credits, including general elective credits, are required for the Bachelor of Science degree in Physics.

The University's Tier II writing requirement for the Physics major is met by completing 3 or 4 credits of Astronomy and Astrophysics 410. That course is referenced in item 3. b. (1) below.

2. The requirements of the College of Natural Science for the Bachelor of Science degree.

The credits earned in certain courses referenced in requirement 3. below may be counted toward College requirements as appropriate.

3. The following requirements for the major:

a. The following courses outside the Department of Physics and Astronomy:

<table>

CREDITS

ASTROPHYSICS

The Bachelor of Science degree with a major in Astrophysics is designed to provide an extensive background in both physics and astrophysics; a student who graduates with this degree may apply for admission to graduate study in either astronomy or physics.

Requirements for the Bachelor of Science Degree in Astrophysics

1. The University requirements for bachelor's degrees as described in the Undergraduate Education section of this catalog; 120 credits, including general elective credits, are required for the Bachelor of Science degree in Astrophysics.

The University's Tier II writing requirement for the Astrophysics major is met by completing 3 or 4 credits of Astronomy and Astrophysics 410. That course is referenced in item 3. b. (1) below.

2. The requirements of the College of Natural Science for the Bachelor of Science degree.

The credits earned in certain courses referenced in requirement 3. below may be counted toward College requirements as appropriate.

3. The following requirements for the major:

a. The following courses outside the Department of Physics and Astronomy:

The completion of Physics 390 and 410, or Physics 491 and 492, fulfills the department's capstone course requirement.
Bachelor of Arts

The Bachelor of Arts degree with a major in physics is provided for those students who wish a physics major combined with a broader education in the liberal arts than the Bachelor of Science degree program permits. This degree program is also suitable for those students who plan to meet the requirements for teacher certification.

Requirements for the Bachelor of Arts Degree in Physics

1. The University requirements for bachelor's degrees as described in the Undergraduate Education section of this catalog; 120 credits, including general elective credits, are required for the Bachelor of Arts degree in Physics. The University's Tier II writing requirement for the Physics major is met by completing one of the clusters of courses referenced in item 3.b. (2) below.

   Students who are enrolled in the College of Natural Science may complete the alternative to Integrative Studies in Biological and Physical Sciences that is described in item 1 under the heading Graduation Requirements in the College statement. Certain courses referenced in requirement 3. below may be used to satisfy the alternative track.

2. The requirements of the College of Natural Science for the Bachelor of Arts degree. The credits earned in certain courses referenced in requirement 3. below may be counted toward College requirements as appropriate.

3. The following requirements for the major:

   a. The following courses outside the Department of Physics and Astronomy: 25 or 26

      (1) One of the following courses (3 or 4 credits):
      BS 110 Organisms and Populations ................................. 4
      BS 111 Cells and Molecules ........................................ 3
      ENT 202 Pests, Society and Environment ........................... 3
      MMG 205 Allied Health Microbiology ................................. 3
      PLB 105 Plant Biology ................................................ 3
      PSL 250 Introductory Physiology ...................................... 4
      ZOL 141 Introductory Human Genetics ................................ 3

      (2) One of the following courses (4 credits):
      CEM 141 General Chemistry ........................................... 4

      (3) All of the following courses (15 credits):
      CEM 161 Chemistry Laboratory I ...................................... 4
      MTH 132 Calculus I .................................................. 3
      MTH 133 Calculus II ................................................ 3
      MTH 234 Multivariable Calculus ...................................... 4
      MTH 235 Differential Equations ..................................... 3
      One Mathematics course at the 300 level or above of at least 3 credits.

   b. The following courses in the Department of Physics and Astronomy: 27 to 32

      (1) All of the following courses (8 credits):
      PHY 191 Physics Laboratory for Scientists, I ..................... 1
      PHY 192 Physics Laboratory for Scientists, II .................... 1
      PHY 321 Classical Mechanics I ...................................... 3
      PHY 410 Thermal and Statistical Physics ............................. 3
      PHY 490 Senior Thesis ................................................ 3

      (2) One of the following clusters of courses (4 to 6 credits):

         (A) Thesis cluster
         PHY 390 Physics Journal Seminar .................................. 1
         PHY 491 Atomic, Molecular, and Condensed Matter Physics .... 3

         (B) Lecture course cluster
         PHY 183 Physics for Scientists and Engineers I .................. 4
         PHY 183B Physics for Scientists and Engineers II .............. 4
         PHY 193H Honors Physics I—Mechanics ............................ 3
         PHY 294H Honors Physics II—Electromagnetism .................. 3
         PHY 215B Thermodynamics and Modern Physics ................. 3
         PHY 431 Optics ..................................................... 3
         PHY 440 Electronics ............................................... 4
         PHY 471 Quantum Physics I ........................................ 3
         PHY 481 Electricity and Magnetism I ................................ 3
         The completion of Physics 390 and 490 or Physics 491 and 492, fulfills the department's capstone course requirement.
NATURAL SCIENCE
Department of Physics and Astronomy

Admission
For admission to the master's degree program in astrophysics and astronomy on regular status, the student must have:
1. Completed mathematics and astronomy or physics courses equivalent to those that are required for an undergraduate major in physics or astronomy.
2. A satisfactory grade–point average, normally at least 3.00, in the courses referenced in item 1. above.

Students who do not meet the requirements for admission to the program on regular status may be admitted on a provisional basis to remove deficiencies.

Requirements for the Master of Science Degree in Astrophysics and Astronomy

The student must:
1. Complete a total of 30 credits for the degree under either Plan A (with thesis) or Plan B (without thesis).
2. Pass a qualifying master’s exam that tests basic knowledge of undergraduate physics.
3. Complete the following core physics courses or their subject examinations, and the following core of astronomy courses, with a grade-point average of 3.0 or higher.

Physics
PHY 820 Classical Mechanics 3
PHY 831 Statistical Mechanics 3
PHY 841 Classical Electrodynamics 3

Astronomy
AST 810 Radiation Astrophysics 3
AST 825 Galactic Astronomy 3
AST 835 Extragalactic Astronomy 3
AST 840 Stellar Astrophysics 3
PHY 983 Nuclear Astrophysics 3
4. Complete one semester of half-time teaching.

Additional Requirements for Plan A
1. Complete at least 4 credits of Astronomy 899 Master's Thesis Research.
2. Pass a final oral examination in defense of the thesis.

Additional Requirements for Plan B
1. Complete 6 credits in Astronomy 805 Research Project. This research project is taken over two semesters and will be graded on the basis of a written paper and oral examination.
2. Pass a final examination or evaluation.

Doctor of Philosophy
In addition to meeting the requirements of the university and of the College of Natural Science, students must meet the requirements specified below.

Admission
For admission to the doctoral degree program in astrophysics and astronomy on regular status, the student must have:
1. Completed mathematics and astronomy or physics courses equivalent to those that are required for an undergraduate major in physics or astronomy.
2. A satisfactory grade–point average, normally at least 3.00, in the courses referenced in item 1. above.

Requirements for the Doctor of Philosophy Degree in Astrophysics and Astronomy

The student must:
1. Pass the doctoral qualifying exam that tests basic knowledge of undergraduate physics.
2. Complete the following core graduate physics courses or their subject examinations, and the following core of astronomy courses, with a grade-point average of 3.375 or higher.

Physics
PHY 820 Classical Mechanics 3
PHY 831 Statistical Mechanics 3
PHY 841 Classical Electrodynamics 3

Astronomy
AST 810 Radiation Astrophysics 3
AST 825 Galactic Astronomy 3
AST 835 Extragalactic Astronomy 3
AST 840 Stellar Astrophysics 3
PHY 983 Nuclear Astrophysics 3
3. Satisfactorily complete 6 credits in Astronomy 805 Research Project. This research project is taken over two semesters and will be graded on the basis of a written paper and oral examination that also serves as the student's comprehensive examination.
4. Complete one semester of half-time teaching.
5. Complete a doctoral dissertation on original research.

CHEMICAL PHYSICS
For information about the Doctor of Philosophy degree program with a major in chemical physics, refer to the statement on the Department of Chemistry.

PHYSICS

Master of Science
In addition to meeting the requirements of the university and of the College of Natural Science, students must meet the requirements specified below.

Admission
For admission to the master’s degree program in physics on regular status, the student must have:
1. Completed physics and mathematics courses equivalent to those that are required for an undergraduate major in physics.
2. A satisfactory grade–point average, normally at least 3.00, in the courses referenced in item 1. above.

Students who do not meet the requirements for admission to the program on regular status may be admitted on a provisional basis to remove deficiencies.
Requirements for the Master of Science Degree in Physics

The student must complete a total of 30 credits for the degree under either Plan A (with thesis) or Plan B (without thesis).

A grade of at least 3.0 (B) on the qualifying examination based on first-year graduate-level physics courses in classical mechanics, quantum mechanics, electrodynamics, and statistical mechanics is required. This examination is offered in the fall and spring semesters and must be taken the first time that it is offered after the student has completed his or her first year of graduate study. Detailed regulations and sample examinations are available from the departmental office.

Doctor of Philosophy

In addition to meeting the requirements of the university and the College of Natural Science, students must meet the requirements specified below.

Admission

For admission to the doctoral degree program in physics on regular status, the student must have:

1. Completed physics and mathematics courses equivalent to those that are required for an undergraduate major in physics.
2. A grade-point average of at least 3.00 in the courses referenced in item 1. above.

Evidence of some undergraduate or post graduate research experience is desirable.

Students who do not meet the requirements for admission to the program on regular status may be admitted on a provisional basis to remove deficiencies.

Requirements for the Doctor of Philosophy Degree in Physics

A grade of 4.0 (A) on the qualifying examination based on first-year graduate-level physics courses in classical mechanics, quantum mechanics, electrodynamics, and statistical mechanics is required. This examination is offered in the fall and spring semesters and must be taken the first time that it is offered after the student has completed his or her first year of graduate study. Detailed regulations and sample examinations are available from the departmental office. A dissertation presenting the results of an original laboratory or theoretical investigation is required. One semester of half-time teaching is also required.

DEPARTMENT of PHYSIOLOGY

The Department of Physiology is administered jointly by the colleges of Natural Science, Human Medicine, Osteopathic Medicine, and Veterinary Medicine.

The Department of Physiology seeks to provide fundamental information into the way genes, their regulation and dysregulation, determine our biological fate and how they can cause disease. The department takes a multidisciplinary approach that requires the scientific skills of a variety of disciplines, including many non-traditionally associated with biomedicine, and focuses on determining how genes and proteins signal cells in the processes of multiplication, differentiation, metabolism, migration, and cell death in the context of complex organisms. With a commitment to use the latest in cellular and molecular technologies, the Department of Physiology promotes an environment in which questions of fundamental importance to medicine and biology can be addressed.

The Department of Physiology’s approach is to promote research that probes the molecular mechanisms of particular medical problems, to investigate the interaction between environment and genes especially in causing disease, and to discover the role of many genes that are involved in particular diseases. Departmental scientists seek critical information into how specific genes are controlled and expressed by factors both internal and external to the organism. An ultimate aim is to achieve the ability to manipulate the expression of genes involved in disease such that illness can be ameliorated, prevented or cured.

For the most part, departmental scientists do not concentrate directly on treating patients or developing drug therapies, but instead focus on filling critical information gaps in understanding the molecular origins of a disease, and consequently serving as a knowledge bridge that is essential for other scientists and physicians, generally in collaboration, to translate that basic research into effective treatments and cures.

UNDERGRADUATE PROGRAM

The Bachelor of Science degree program in Physiology combines elements of a liberal education with thorough preparation in molecular, cellular, and organ systems physiology built on a foundation of biology, chemistry, physics, and mathematics. It is intended primarily for those students who wish to pursue careers in research, industry, medicine, or other health-related fields, for which a thorough knowledge of physiology is necessary. Students learn a broad range of topics in the field of contemporary molecular and cellular physiology and biomedical research. This major is particularly suitable for students in the life sciences who plan further studies at the graduate or professional level.

In order to increase the flexibility of the program and to foster a meaningful undergraduate experience, students are encouraged to participate in independent research under the supervision of a
departmental faculty member. Independent research is available to both Honors College and other students, and often culminates in a written report or a presentation at the University Undergraduate Research Forum. This research may fulfill all or part of the department’s capstone laboratory requirement for the bachelor’s degree in physiology.

Students seeking admission to the program should complete a high school science or college preparatory curriculum, ensuring that their programs include courses required for admission to the university. Students are also encouraged to complete their preparatory biology, chemistry, mathematics, and physics courses early during their course of collegiate study.

Requirements for the Bachelor of Science Degree in Physiology

1. The University requirements for bachelor’s degrees as described in the Undergraduate Education section of this catalog, 120 credits, including general elective credits, are required for the Bachelor of Science degree in Physiology.

   The University’s Tier II writing requirement for the Physiology major is met by completing Physiology 450 and one of the following courses: Physiology 420, 426, 439, 440, 441, 442, 443, 444, 445, 466, 447, 448, or 449. Those courses are referenced in item 3.b. below.

   Students who are enrolled in the College of Natural Science may complete the alternative track to Integrative Studies in Biological and Physical Sciences that is described in item 1. under the heading Graduation Requirements in the College statement. Certain courses referenced in requirement 3. below may be used to satisfy the alternative track.

2. The requirements of the College of Natural Science for the Bachelor of Science degree.

   The completion of the Biological Science, Chemistry, Mathematics, and Physics courses referenced in requirement 3. below satisfies the requirements referenced in item 3.a.(1) through (5) under the heading Graduation Requirements in the College statement. The credits earned in other courses referenced in requirement 3. below may be counted toward other College requirements as appropriate.

3. The following requirements for the major:

   a. The following courses outside the Department of Physiology: ........................................ 67 to 70

      (1) All of the following courses (43 credits):

      BMB 461 Biochemistry I ............................................. 3
      BMB 462 Biochemistry II ........................................... 3
      BS 110 Organisms and Populations ............................. 4
      BS 111 Cells and Molecules ........................................ 3
      BS 111L Cell and Molecular Biology Laboratory ........... 2
      CEM 141 General Chemistry ....................................... 4
      CEM 142 General and Inorganic Chemistry .................... 3
      CEM 161 Chemistry Laboratory I ................................ 1
      CEM 162 Chemistry Laboratory II ................................ 1
      CEM 251 Organic Chemistry I ..................................... 3
      CEM 252 Organic Chemistry II ................................... 3
      CEM 255 Organic Chemistry Laboratory ....................... 2
      CEM 383 Introductory Physical Chemistry I .................. 3
      PHY 231 Introductory Physics I .................................. 3
      PHY 232 Introductory Physics II ................................ 3
      PHY 251 Introductory Physics Laboratory I ................. 1
      PHY 252 Introductory Physics Laboratory II ................ 1

      (2) One of the following courses (3 or 4 credits):

      ANTR 350 Human Gross Anatomy and Structural Biology 3
      ZOL 320 Developmental Biology .................................. 4
      ZOL 328 Comparative Anatomy and Biology of Vertebrates .... 4

      (3) One of the following pairs of courses (6 or 7 credits):

      (a) MTH 132 Calculus I .............................................. 3
          MTH 133 Calculus II ............................................ 4
      (b) MTH 124 Survey of Calculus I .............................. 3
          MTH 126 Survey of Calculus II .............................. 3

      (4) One of the following courses (3 or 4 credits):

      STT 201 Statistical Methods ...................................... 4
      STT 231 Statistics for Scientists ............................... 4
      PSL 410 Computational Problem Solving in Physiology .... 3

      (5) Twelve credits in nonscience courses beyond the credits that are counted toward University requirements.

   b. The following courses in the Department of Physiology: ............................................. 13

      (1) All of the following courses (11 credits):

      PSL 431 Human Physiology I ..................................... 3
      PSL 432 Human Physiology II ................................... 3
      PSL 450 Physiology in Health and Disease ................. 3
      PSL 475 Capstone Laboratory in Physiology ............... 2

      The completion of Physiology 475 satisfies the department’s capstone course requirement.

GRADUATE STUDY

The Department of Physiology is administered jointly by the colleges of Natural Science, Human Medicine, Osteopathic Medicine, and Veterinary Medicine. Study for the Master of Science or Doctor of Philosophy degree with a major in physiology may be administered by any one of the four colleges referenced above. Study for the Doctor of Philosophy degree with a major in physiology—environmental toxicology is administered by the College of Veterinary Medicine.

Students who are enrolled in master’s or doctoral degree programs in the Department of Physiology may elect an interdisciplinary specialization in Integrative Medicine. For additional information, refer to the statement on Interdepartmental Graduate Specializations in Cognitive Science in the College of Social Science section of this catalog. For additional information, contact the Department of Physiology.

PHYSIOLOGY

The department offers work leading to the Doctor of Philosophy degree and, in some cases, to the Master of Science degree. The principal objectives of graduate education in physiology are to obtain broad, basic knowledge in the subject matter of this and related fields, and to obtain training in physiological research methods. Major emphasis is placed upon the completion by the student of original research which would provide a significant contribution to knowledge. The facilities and staff are particularly suited to offer training in the following areas of physiology: cellular and molecular physiology, endocrinology, the cardiovascular system, gastrointestinal physiology and metabolism, neurophysiology, respiration, radiobiology, lactation, renal function, reproduction, comparative physiology, and biophysics.

A manual available at the department graduate office contains information on admission policies, financial support, and requirements for the Master of Science and Doctor of Philosophy degree programs in physiology. Departmental graduate stipends are awarded on the basis of merit, subject to the availability of funds.

Master of Science

In addition to meeting the requirements of the university and of the College of Natural Science, Human Medicine, Osteopathic Medicine, or Veterinary Medicine, students must meet the requirements specified below.

Admission

An undergraduate major in physiology is not a prerequisite to graduate study. However, a broad background in the basic sciences, including biology, chemistry, physics, and mathematics (through calculus), is essential. The minimum requirements include one year of physiology, biology, or zoology; one year each
of mathematics and physics; and chemistry through organic and quantitative analysis. A deficiency in these requirements may be removed by successfully completing appropriate courses as collateral work early in the graduate program. Admission is based upon evaluation of the student's past record, results of the Graduate Record Examination, and recommendations.

Requirements for the Master of Science Degree

Requirements for the Doctor of Philosophy Degree in Physiology

In addition to meeting the requirements of the university and of the College of Natural Science, Human Medicine, Osteopathic Medicine, or Veterinary Medicine, students must meet the requirements specified below.

Admission

Entry into the Doctor of Philosophy degree program requires that the student has a major advisor and holds a Master of Science or a professional degree, or has passed the departmental Comprehensive Examination.

Requirements for the Doctor of Philosophy Degree

Students entering a doctoral program with advanced standing must meet with the guidance committee within the first two semesters of doctoral study. The committee is composed of at least four faculty members, in addition to the major advisor, and must include one representative from another department. The course work, research program, and overall requirements needed to qualify for candidacy for the degree are planned in consultation with the guidance committee. However, the student's Guidance Committee Report is approved by the committee only after the student has demonstrated the potential to do research. Such potential may be demonstrated by any of the following:

a. previous attainment of a master's degree with a thesis
b. previous publication of research results
c. other documented evidence of research capability.

The student must pass the Comprehensive Examination within the first two years of graduate study. The Comprehensive Examination which tests the student's breadth of knowledge in physiology, is administered by the Graduate and Professional Course and Curriculum Committee. The student presents a thesis research proposal and presents the proposal to the faculty at a seminar. The proposal must be acceptable to the guidance committee. While the program is in progress, the student meets periodically with the guidance committee for evaluation.

A dissertation based on original research outlined in the proposal must be submitted, approved by, and defended in an oral examination before the guidance committee. The dissertation is expected to show evidence of originality in its conception and execution and must be written in a clear and logical manner. Typically, three or more years of study beyond the bachelor's degree are needed to meet these requirements.

Doctor of Philosophy

In addition to meeting the requirements of the university and of the College of Natural Science, Human Medicine, Osteopathic Medicine, or Veterinary Medicine, students must meet the requirements specified below.

Admission

Entry into the Doctor of Philosophy degree program requires that the student has a major advisor and holds a Master of Science or a professional degree, or has passed the departmental Comprehensive Examination.

Requirements for the Doctor of Philosophy Degree

Students entering a doctoral program with advanced standing must meet with the guidance committee within the first two semesters of doctoral study. The committee is composed of at least four faculty members, in addition to the major advisor, and must include one representative from another department. The course work, research program, and overall requirements needed to qualify for candidacy for the degree are planned in consultation with the guidance committee. However, the student's Guidance Committee Report is approved by the committee only after the student has demonstrated the potential to do research. Such potential may be demonstrated by any of the following:

a. previous attainment of a master's degree with a thesis
b. previous publication of research results
c. other documented evidence of research capability.

The student must pass the Comprehensive Examination within the first two years of graduate study. The Comprehensive Examination which tests the student's breadth of knowledge in physiology, is administered by the Graduate and Professional Course and Curriculum Committee. The student presents a thesis research proposal and presents the proposal to the faculty at a seminar. The proposal must be acceptable to the guidance committee. While the program is in progress, the student meets periodically with the guidance committee for evaluation.

A dissertation based on original research outlined in the proposal must be submitted, approved by, and defended in an oral examination before the guidance committee. The dissertation is expected to show evidence of originality in its conception and execution and must be written in a clear and logical manner. Typically, three or more years of study beyond the bachelor's degree are needed to meet these requirements.

DEPARTMENT of PLANT BIOLOGY

Richard E. Triemer, Chairperson

The Department of Plant Biology is administered jointly by the College of Natural Science and the College of Agriculture and Natural Resources. Plant Biology is the branch of natural science that deals with all aspects of the biology of plants, encompassing all levels of biological organization from molecules to the ecosystem. Plant biology concerns itself with the study of the structure, function, evolution, physiology, molecular biology, biochemistry, genetics, and systematics of all taxonomic groups of plants and fungi. Plant biology is central to the wide divergence of disciplines that make up modern plant science at Michigan State University and deals with the relationships between plants and society. Students in this program can study all aspects of plant biology and they are trained to integrate information between different hierarchies of biological organization while at the same time developing a deep understanding of their area of specialization.

UNDERGRADUATE PROGRAMS

The Department of Plant Biology offers two Bachelor of Science degree programs: one in plant biology and one in environmental biology/plant biology.

PLANT BIOLOGY

The Bachelor of Science degree program with a major in plant biology is designed for students who plan to pursue careers in plant biotechnology industries, nurseries, botanical gardens, museums, herbaria, agricultural extension, or research laboratories, or who plan to pursue graduate study in the field of plant biology or related disciplines. The following concentrations are available to students who are enrolled in the plant biology program: (a) Plant Ecology and Evolution; (b) Plant Physiological, Molecular and Cellular Biology; and (c) General Plant Biology.

Requirements for the Bachelor of Science Degree

1. The University requirements for bachelor's degrees as described in the Undergraduate Education section of this catalog; 120 credits, including general elective credits, are required for the Bachelor of Science degree in Plant Biology.

The University's Tier II writing requirement for the Plant Biology major is met by completing Plant Biology 498 and 499 and one of the following courses: Plant Biology 316 or 441 or Zoology 355L. Those courses are referenced in items 3.f. and 3.h. below. Students who are enrolled in the College of Natural Science may complete the alternative track to Integrative Studies in Biological and Physical Sciences that is described in item 1. under the heading Graduation Requirements in the College statement. Certain courses referenced in requirement 3.b. below may be used to satisfy the alternative track.

2. The requirements of the College of Natural Science for the Bachelor of Science degree.

The credits earned in certain courses referenced in requirement 3.b. below may be counted toward College requirements as appropriate.

3. The following requirements for the major:

   a. One of the following groups of courses (6 to 10 credits):

      (1) BS 161 Cell and Molecular Biology ..................3
      BS 162 Organismal and Population Biology ..............3
      BS 171 Cell and Molecular Biology Laboratory ..........2

   CREDITS

49
NATURAL SCIENCE
Department of Plant Biology

BS 172 Organismal and Population Biology Laboratory ........................................... 2
(2) LB 144 Biology I: Organismal Biology ............................................................ 5
LB 145 Biology II: Cellular and Molecular Biology ............................................. 5
(3) BS 181H Honors Cell and Molecular Biology .................................................. 3
BS 182H Honors Organismal and Population Biology ................................. 3

b. One of the following groups (8 credits):
(1) CEM 141 General Chemistry ................................................................. 4
CEM 142 General and Inorganic Chemistry .................................................. 4
CEM 161 Chemistry Laboratory I .............................................................. 1
(2) CEM 151 General and Descriptive Chemistry ............................................. 4
CEM 161 Principals of Chemistry ................................................................. 1
CEM 161 Chemistry Laboratory I .............................................................. 1

c. All of the following courses (9 credits):
BMB 461 Advanced Biochemistry I ............................................................... 3
CEM 251 Organic Chemistry I ................................................................. 3
CEM 252 Organic Chemistry II ................................................................. 3

(d) One of the following groups (18 credits):
(1) PHY 183 Physics for Scientists and Engineers I .......................................... 4
PHY 184 Physics for Scientists and Engineers II ............................................. 4
(2) PHY 232 Introductory Physics I ................................................................. 3
PHY 232 Introductory Physics II ................................................................. 3
PHY 251 Introductory Physics Laboratory I ................................................. 1
PHY 252 Introductory Physics Laboratory II .................................................. 1

2. The requirements of the College of Natural Science for the Bachelor of Science degree are designed to prepare students for careers in nature organizations, environmental impact firms, or graduate study in the biological sciences. Graduates may be employed in nature organizations, environmental impact firms, or government.

Requirements for the Bachelor of Science Degree in Environmental Biology/Plant Biology

1. The University requirements for bachelor's degrees as described in the Undergraduate Education section of this catalog. 120 credits, including general elective credits, are required for the Bachelor of Science degree in Environmental Biology/Plant Biology.

The University's Tier II writing requirement for the Environmental Biology/Plant Biology major is met by completing the following courses: Plant Biology 423, 499, and 499 and Zoology 355L. Those courses are referenced in item 3. a. below.

Students who are enrolled in the College of Natural Science may complete the alternative track to Integrative Studies in Biological andPhysical Sciences that is described in item 1. under the heading Graduation Requirements in the College statement. Certain courses referenced in requirement 3. below may be used to satisfy the alternative requirements.

2. The requirements of the College of Natural Science for the Bachelor of Science degree.

The credits earned in certain courses referenced in requirement 3. below may be counted toward College requirements as appropriate.

3. The following requirements for the major:

a. All of the following courses: ................................................................. 46

CEM 141 General Chemistry ................................................................. 4
CEM 142 General and Inorganic Chemistry ............................................. 3
CEM 161 Chemistry Laboratory I .............................................................. 1
CEM 251 Organic Chemistry I ................................................................. 3
CEM 252 Organic Chemistry II ................................................................. 3

b. One of the following courses: ............................................................. 3

PLP 405 Plant Pathology ................................................................. 3
GRADUATE STUDY

The Department of Plant Biology is administered jointly by the College of Natural Science and the College of Agriculture and Natural Resources. The department offers Master of Science and Doctor of Philosophy degree programs with majors in plant biology. Those programs are referenced below. The department also offers Master of Science and Doctor of Philosophy degree programs with majors in plant breeding and genetics—botany and plant pathology through the College of Agriculture and Natural Resources. For information about those programs, refer to the statement on the Department of Plant Biology in the College of Agriculture and Natural Resources section of this catalog.

The Department of Plant Biology is affiliated with the Doctor of Philosophy degree program with a major in ecology, evolutionary biology and behavior. For information about a Doctor of Philosophy degree program that involves ecology, evolutionary biology and behavior and a major in the Department of Plant Biology, refer to the statement on the doctoral program in ecology, evolutionary biology and behavior.

Students who are enrolled in Master of Science degree programs in the Department of Plant Biology may elect a Specialization in Ecology, Evolutionary Biology and Behavior. For additional information, refer to the statement on the specialization.

PLANT BIOLOGY

Graduate students in plant biology may emphasize one or more of a number of special areas, including anatomy, bryology, cell biology, ecology, genetics, molecular biology, morphology, mycology, paleobotany, physiology, and taxonomy. Students are urged to take courses which provide a broad background in biological and physical sciences in addition to training in specialized areas.

Master of Science

In addition to meeting the requirements of the university and of the College of Natural Science, students must meet the requirements specified below.

Admission

Regular admission may be granted to those students who have a bachelor's degree or its equivalent, a 3.00 grade–point average, one year each of chemistry, mathematics, and physics, and appropriate training in the biological sciences.

Provisional admission may be granted to those students who do not meet the requirements for regular admission.

Requirements for the Master of Science Degree in Plant Biology

The master's degree program in plant biology is available under either Plan A (with thesis) or Plan B (without thesis). The student's program of study is arranged by a guidance committee which includes the major professor.

For either Plan A or Plan B, the student must complete at least 30 credits including:

1. Both of the following courses:
   - PLB 800 Seminar in Plant Biology 1
   - PLB 803 Integrative Topics in Plant Biology 2

2. Acquire teaching experience by assisting in at least one course.
   A reading knowledge of a foreign language may be required.

Doctor of Philosophy

In addition to meeting the requirements of the university and of the College of Natural Science, students must meet the requirements specified below.

Admission

Regular admission may be granted to those students who have a master's degree or its equivalent, a 3.00 grade–point average, and appropriate training in the biological sciences. Outstanding students without a master's degree may be accepted.

Provisional admission may be granted to those students who do not meet the requirements for regular admission.

Requirements for the Doctor of Philosophy Degree in Plant Biology

All doctoral students in plant biology must meet the requirements specified below:

1. Complete the following courses:
   a. Both of the following courses:
      - PLB 800 Seminar in Plant Biology 1
      - PLB 803 Integrative Topics in Plant Biology 2
   b. One of the following courses:
      - NSC 830 Nature and Practice of Science 1
      - Students who do not complete NSC 830 must complete the workshop series offered by The Graduate School:
        - Responsible Conduct of Research 0
   c. One of the following courses:
      - CMB 800 Cell and Molecular Biology Seminar 1
      - ENT 812 Graduate Seminar 1
      - FOR 804 Forest Ecology 3
      - FW 893 Seminar in Fisheries and Wildlife 1
      - GEN 800 Genetics Seminar 1
      - GEO 874 Seminar in Geographic Information Science 3
      - HRT 892 Plant Breeding and Genetics Seminar 1
      - PLP 894 Seminar in Plant Pathology 1
      - ZOL 891 Current Topics in Ecology and Evolution 1
      - ZOL 895 Seminar 1

2. Pass a preliminary examination.
3. Acquire teaching experience by assisting in two courses.

Additional requirements, such as reading knowledge of one or two foreign languages, may be specified.
Statistics is the study of methods of drawing inferences from sets of data. These methods are based on probability theory and depend for their application upon the existence of a statistical regularity in natural events. In the present century, tremendous strides have been made in the physical, biological, and social sciences as well as in engineering and business by the use of statistical methods and models to describe and aid in the explanation of basic phenomena. In the last few decades, a strong interest has developed in the intensive study of statistical inference aside from its uses, in the same way that physical sciences have developed aside from engineering.

UNDERGRADUATE PROGRAMS

The first two years of an undergraduate program in statistics stress development of a solid background in two areas: basic mathematics and computers. In addition, it is recommended that students planning to major in statistics complete either Statistics and Probability 201 or 231 in their freshman or sophomore years. The rest of the student’s program involves a mixture of work selected from statistics, mathematics, computer programming, and possibly one or more fields of application. Statistics majors who plan to do graduate work should include advanced calculus in their undergraduate programs and should acquire proficiency in at least one of the following languages: French, German, or Russian.

Requirements for the Bachelor of Science or Bachelor of Arts Degree in Statistics

1. The University requirements for bachelor's degrees as described in the Undergraduate Education section of this catalog; 120 credits, including general elective credits are required for the Bachelor of Science or Bachelor of Arts degree in Statistics.

   The University’s Tier II writing requirement for the Statistics major is met by completing Mathematics 310 and Statistics and Probability 481. Those courses are referenced, respectively, in items 3. a. (1) and 3. b. (1) below.

   Students who are enrolled in the College of Natural Science may complete the alternative to integrative studies in Biological and Physical Sciences that is described in item 1. under the heading Graduation Requirements in the College statement. Certain courses referenced in requirement 3. below may be used to satisfy the alternative track.

2. The requirements of the College of Natural Science for the Bachelor of Science degree or Bachelor of Arts degree.

   The credits earned in certain courses referenced in requirement 3. below may be counted toward College requirements as appropriate.

   a. The following courses outside the Department of Statistics and Probability: 16

      (1) All of the following courses (10 credits):
      MTH 234 Multivariable Calculus ........................................... 4
      MTH 309 Linear Algebra I ................................................. 3
      MTH 310 Abstract Algebra I and Number Theory .................. 3
      (2) One of the following courses (3 credits):
      CSE 101 Computing Concepts and Competencies ................ 3
      CSE 131 Introduction to Technical Computing ..................... 3
      Students who pass a waiver examination for Computer Science and Engineering 101 will not be required to complete Computer Science and Engineering 101 or 131.
      (3) Three additional credits in Computer Science and Engineering courses.

   b. The following courses in the Department of Statistics and Probability: 19

      (1) The following capstone course (1 credit):
      STT 481 Issues in Statistical Practice .................................. 1
      (2) One of the following groups of courses (18 credits):

      (a) MTH 320 Analysis I .................................................. 3
      MTH 421 Analysis II ................................................... 3
      STT 861 Theory of Probability and Statistics I .............. 3
      STT 862 Theory of Probability and Statistics II .......... 3
      Six additional credits from the Statistics and Probability courses that appear on the list below.
      (b) Three additional credits in Mathematics 235 or in 300–400 level Mathematics courses.
      STT 441 Probability and Statistics I: Probability ............. 3
      STT 442 Probability and Statistics II: Statistics ............. 3
      Nine additional credits from the Statistics and Probability courses that appear on the list below.
      c. Demonstrate knowledge of at least one software package in statistics either by completing relevant courses or by completing a departmentally approved project through enrollment in Statistics and Probability 490.

   Additional Statistics and Probability courses that may be counted toward the requirements for the Statistics major:

   STT 422 Statistics II ................................................... 3
   STT 455 Actuarial Models ................................................ 3
   STT 461 Computations in Probability and Statistics .......... 3
   STT 464 Statistical Methods for Biologists I ................. 3
   STT 465 Statistical Methods for Biologists II .............. 3
   STT 471 Statistics for Quality and Productivity ............ 3
   STT 825 Sample Surveys ................................................ 3
   STT 863 Applied Statistics Methods I ......................... 3
   STT 886 Stochastic Processes and Applications ............ 3

GRADUATE STUDY

The Department of Statistics and Probability offers two majors that lead to master's degrees: applied statistics and statistics. The department also offers a major in statistics that leads to the Doctor of Philosophy degree.

Each of the master's and doctoral degree programs is described below. For more detailed information on degree requirements, write to the department.

APPLIED STATISTICS

Master of Science

The goals of the master’s degree program in applied statistics are to provide students with a broad understanding of the proper application of statistical methodology and with experience in using computers effectively for statistical analysis. The student may emphasize either theoretical or applied material. Special emphasis is placed on the concerns that an applied statistician must address in dealing with practical problems.

In addition to meeting the requirements of the university and of the College of Natural Science, students must meet the requirements specified below.

Admission

To be admitted to the master’s degree program in applied statistics, the applicant should have completed at least 6 credits of junior or senior level mathematics with a minimum grade-point average of 3.00 over the last 6 credits. No previous course work in statistics or probability is required.

Requirements for the Master of Science Degree in Applied Statistics

The program is available only under Plan B (without thesis). An academic advisor coordinates the student’s program of study, which must be approved by the chairperson of the department.

The student must:

1. Complete either a. or b. For students who select option b., at least half of the courses completed for the degree must be at the 800-level or above.
STATISTICS

Master of Science

The goal of the master's degree program in statistics is to provide students with a sound foundation in probability, mathematical statistics, and statistical methodology. The student may emphasize either theoretical or applied material.

In addition to meeting the requirements of the university and of the College of Natural Science, students must meet the requirements specified below.

Requirements for the Master of Science Degree in Statistics

The program is available under either Plan A (with thesis) or Plan B (without thesis). An academic advisor coordinates the student's program of study, which must be approved by the chairperson of the department.

The student must complete:

2. Complete at least 15 credits in courses in the Department of Statistics and Probability or in a field of application of probability and statistics.
3. Complete six additional courses from a list approved by the department. At least five must be at the 900-level including:
   a. Two of the following advanced probability courses: Statistics and Probability 871, 872, 881, and 882.
   b. All of the following courses (12 credits):
      - MTH 415 Applied Linear Algebra 3
      - STT 461 Computations in Probability and Statistics 3
      - STT 861 Theory of Probability and Statistics I 3
      - STT 862 Theory of Probability and Statistics II 3
3. Complete at least five additional courses at the 800-level or probability and statistics.
4. Pass a written master's examination based on materials covered in Statistics and Probability 441 and 442 or 861 and 862, depending on the sequence the student has taken.

Doctor of Philosophy

The Doctor of Philosophy degree program with a major in statistics is designed for students who plan to pursue careers in university teaching and research or in industrial and government consulting and research. The major emphasis in the doctoral program is on the attainment of a sound background in theoretical probability and statistics. A doctoral student may choose to emphasize either probability theory or mathematical statistics.

In addition to meeting the requirements of the university and of the College of Natural Science, students must meet the requirements specified below.

Admission

Completion of course work equivalent to that required for any one of the master's degree programs in this department and evidence of ability to work at the doctoral level are required for admission. Applicants who have not had courses equivalent to Statistics and Probability 861 and 862 or advanced calculus or linear algebra will be required to complete these courses.

Requirements for the Doctor of Philosophy Degree in Statistics

The program of study is developed by the guidance committee in consultation with the student. The program of study will usually emphasize theory, although courses in applications should be included. Although the doctorate is awarded primarily on the ability of the student to carry on significant original research in statistics or probability, as demonstrated in the dissertation, the student must also meet the requirements specified below:

2. Complete ten additional courses from a list approved by the department. At least five must be at the 900-level including:
   a. Two of the following advanced statistics courses: Statistics and Probability 953, 954, or 997.
   b. Two of the following advanced probability courses: Statistics and Probability 961, 964, or 996.
3. Complete at least five additional courses at the 800-level or above from inside or outside of the department.
Zoology is the branch of natural science that deals with animal biology. It is concerned with every level of biological organization from the gene to the ecosystem, and with the structure, physiology, behavior, genetics, development, distribution, and evolution of animals in all taxonomic groups. In a broad sense, zoology also deals with the interrelationships between humans and other animals. The courses in the department span the diversity of animal life and the entire range of modern biological disciplines concerned with animals. There is ample scope for students to obtain a broad education in biology while also specializing in the particular aspects of biology that interest them most.

Programs in zoology can help students to prepare for a wide variety of careers including biomedical research, biotechnology, medicine, dentistry, veterinary science, marine biology, conservation, environmental science, behavioral biology, and teaching.

**UNDERGRADUATE PROGRAMS**

Majors are expected to acquire broad background in the sciences fundamental to the understanding of modern zoology. The chemistry, mathematics, and physics requirements are those of the College. Chemistry and mathematics are normally taken in the freshman year, and physics in the junior year. The Biological Science sequence (110, 111, 111L) should be started in the freshman year since these courses are prerequisites to further study. Course electives in zoology are to be chosen so that they furnish an understanding of the several branches of zoology: animal behavior, cell biology, comparative anatomy, developmental biology, ecology, environmental physiology, evolution, genetics, marine biology, neurobiology, organismal biology, and zoo and aquarium science.

Normally no more than 8 credits of upper-level course work in classes such as directed studies, internship, independent study, study abroad, selected topics, or special topics from any department or college other than Zoology may be counted as Zoology electives toward any Zoology degree. Students may petition the Director of Undergraduate Studies in the department to exceed this 8-credit limit.

**ENVIRONMENTAL BIOLOGY/ZOOLOGY**

**Bachelor of Science**

The objective of the Bachelor of Science degree program with a major in environmental biology/zoology is to help students to understand the concepts of environmental biology and to apply those concepts to improve both the natural environment and the environment perturbed by human activities. The focus of the program is on animal biology. The zoology courses in the program emphasize ecology, systematics, and environmental science.

Students who are enrolled in this program may complete an optional capstone course: Zoology 494 or 496.

**Requirements for the Bachelor of Science Degree in Environmental Biology/Zoology**

1. The University requirements for bachelor's degrees as described in the Undergraduate Education section of this catalog; 120 credits, including general elective credits, are required for the Bachelor of Science degree in Environmental Biology/Zoology. The University's Tier II writing requirement for the Environmental Biology/Zoology major is met by completing Zoology 445 and 483. Those courses are referenced in item 3. a. below.

   Students who are enrolled in the College of Natural Science may complete the alternative track to Integrative Studies in Biological and Physical Sciences that is described in item 1. under the heading Graduation Requirements in the College statement. Certain courses referenced in requirement 3. below may be used to satisfy the alternative track.

2. The requirements of the College of Natural Science for the Bachelor of Science degree.

   The credits earned in certain courses referenced in requirement 3. below may be counted toward College requirements as appropriate.

3. The following requirements for the major:

   a. All of the following courses: ........................................ 56

      | Course                                      | Credits |
      |---------------------------------------------|---------|
      | BS 161 Cell and Molecular Biology           |         |
      | BS 162 Organismal and Population Biology    |         |
      | BS 171 Cell and Molecular Biology Laboratory |         |
      | CEM 141 General Chemistry                   |         |
      | CEM 161 Chemistry Laboratory I              |         |
      | CEM 251 Organic Chemistry I                 |         |
      | CEM 252 Organic Chemistry II                |         |
      | CEM 255 Organic Chemistry Laboratory II     |         |
      | CSS 210 Fundamentals of Soil Science         |         |
      | PHY 231 Introductory Physics I               |         |
      | PHY 232 Introductory Physics II              |         |
      | PHY 251 Introductory Physics Laboratory I    |         |
      | PHY 252 Introductory Physics Laboratory II   |         |
      | PLB 441 Plant Ecology                        |         |
      | ZOL 306 Invertebrate Biology                |         |
      | ZOL 341 Fundamental Genetics                |         |
      | ZOL 355 Ecology                             |         |
      | ZOL 355L Ecology Laboratory (W)              |         |
      | ZOL 445 Evolution (W)                       |         |
      | ZOL 483 Environmental Physiology (W)        |         |

   b. One of the following groups of courses (6 or 7 credits):

      (a) MTH 124 Survey of Calculus I ............. 3
      (b) MTH 132 Calculus I                     ......... 3
      (c) MTH 133 Calculus II                    ......... 4
      (d) MTH 124 Survey of Calculus I And
      (e) STT 201 Or Statistical Methods .......... 4
      (f) STT 224 Or Introduction to Probability and Statistics
      (g) Or And
      (h) STT 231 Or Statistics for Scientists .... 3
      (i) STT 421 Or Statistics I                 ......... 3
      (j) STT 201 Or Statistical Methods .......... 4
      (k) STT 224 Or Introduction to Probability and Statistics
      (l) Or And
      (m) STT 231 Or Statistics for Scientists .... 3
      (n) STT 421 Or Statistics I                 ......... 3

   c. One of the following courses: ..................  4

      | Course                                      | Credits |
      |---------------------------------------------|---------|
      | ZOL 360 Biology of Birds                    |         |
      | ZOL 365 Biology of Mammals                  |         |
      | ZOL 384 Biology of Amphibians and Reptiles (W) |         |

   d. One course from each of the following three groups of courses: ..... 9 to 11

      (1) PLB 218 Plants of Michigan ..............  3
      (2) FW 420 Stream Ecology                   ......... 3
      (3) PLB 424 Algal Biology                   ......... 4
Undergraduate Requirements for the Bachelor of Arts Degree in Zoology

The Bachelor of Arts degree with a major in zoology is designed for students who wish to combine study in zoology with a significant amount of course work outside the sciences. It is also intended for those students who wish to prepare for careers in the applications of science to such fields as public policy, law, business, and communications.

Requirements for the Bachelor of Arts Degree in Zoology

1. The University requirements for bachelor's degrees as described in the Undergraduate Education section of this catalog; 120 credits, including general elective credits, are required for the Bachelor of Arts degree in Zoology.

2. The requirements of the College of Natural Science for the Bachelor of Science degree.

Requirements for the Bachelor of Science Degree in Zoology

1. The University requirements for bachelor's degrees as described in the Undergraduate Education section of this catalog; 120 credits, including general elective credits, are required for the Bachelor of Science degree in Zoology.

2. The requirements of the College of Natural Science for the Bachelor of Science degree.

Bachelor of Science

The Bachelor of Science degree program with a major in zoology is for students who seek professional employment in animal biology, or who seek admission to graduate programs in animal biology or to health-related professional schools. Students may pursue a degree program in general zoology that encompasses the several branches of modern zoology while permitting focused study in any one of these fields. Alternatively, with the prior approval of an academic advisor, students may elect to pursue one of the following specialized concentrations in zoology: cell and developmental biology; ecology, evolution and organismal biology; genetics; neurobiology and animal behavior; zoo and aquatic science, or marine biology.

Requirements for the Bachelor of Science Degree in Zoology

1. The University requirements for bachelor's degrees as described in the Undergraduate Education section of this catalog; 120 credits, including general elective credits, are required for the Bachelor of Science degree in Zoology.

2. The requirements of the College of Natural Science for the Bachelor of Science degree.

3. The following requirements for the major:

   a. One of the following options:
      (1) First year competency in a foreign language.
      (2) Second year competency in a foreign language.
      Mathematics 124 or 132 and Statistics and Probability 201, 224, 231, or 421 may be used to satisfy both the requirement referenced in item 3 a. (2) and the requirement referenced in item 3 d.

   b. All of the following courses: .......................... 34
      CEM 141 General Chemistry ............................ 4
      CEM 143 Survey of Organic Chemistry .................. 4
      CEM 161 Chemistry Laboratory I ........................ 1
      CEM 231 Introductory Physics I ........................ 3
      ZOL 313 Animal Behavior ............................ 3
      ZOL 320 Developmental Biology ........................ 4
      ZOL 341 Fundamental Genetics ........................ 4
      ZOL 355 Ecology .................................. 3
      ZOL 355L Ecology Laboratory .......................... 1
      ZOL 408 Histology .................................. 4
      ZOL 457 Foundations of Evolutionary Biology (W) .... 3
      (1) BS 161 Cell and Molecular Biology ................. 3
      BS 162 Organismal and Population Biology .......... 3
      (2) BS 181H Honors Cell and Molecular Biology .... 3
      BS 182H Honors Organismal and Population Biology 3
      BS 191H Honors Cell and Molecular Biology Laboratory 2
      BS 192H Honors Organismal and Population Biology Laboratory 2
      (3) LB 144 Biology I: Organismal Biology .......... 4
      LB 145 Biology I: Organismal Biology Laboratory 2
      ZOL 306 Vertebrate Biology .......................... 4
      ZOL 328 Comparative Anatomy and Biology of Vertebrates (W) 4
      (1) MTH 124 Survey of Calculus I .................... 3
      MTH 126 Survey of Calculus II ....................... 3
      STT 201 Statistical Methods .......................... 4
      (3) MTH 124 Survey of Calculus I .................... 3
      STT 224 Introduction to Probability and Statistics 3
      (4) MTH 124 Survey of Calculus I .................... 3
      STT 241 Statistics for Scientists .................... 3
      (5) MTH 132 Calculus I ................................ 3
      MTH 133 Calculus II ................................ 4
      (6) MTH 124 Survey of Calculus I .................... 3
      STT 231 Statistics for Scientists .................... 3
      (7) MTH 132 Calculus I ................................ 3
      STT 201 Statistical Methods .......................... 4
      (8) MTH 132 Calculus I ................................ 3
      STT 224 Introduction to Probability and Statistics 3
      for Ecologists .................................. 3
      (9) MTH 132 Calculus I ................................ 3
      STT 231 Statistics for Scientists .................... 3
      (10) MTH 132 Calculus I ............................... 3
      STT 421 Statistics Laboratory ........................ 3
      Mathematics 124 or 132 and Statistics and Probability 201, 224, 231, or 421 may be used to satisfy both the requirement referenced in item 3 a. (2) and the requirement referenced in item 3 d.

   c. Twelve credits in 300–400 level courses offered by the Colleges of Arts and Letters, Business, Communication Arts and Sciences, and Social Science.
### Natural Science Department of Zoology

**The following courses:** .......................... 3

- **(a)** MTH 124 Survey of Calculus I ............................ 3
- **(b)** MTH 126 Survey of Calculus II ............................ 3
- **(c)** MTH 132 Calculus (W) ............................ 3
- **(d)** MTH 133 Calculus II ............................ 4

**And:**

- **STT 201 Statistical Methods** ............................ 4

**Or:**

- **STT 224 Introduction to Probability and Statistics for Ecologists** ............................ 3

**Or:**

- **STT 231 Statistics for Scientists** ............................ 3

**Or:**

- **STT 421 Statistics I** ............................ 3

**And:**

- **STT 201 Statistical Methods** ............................ 4

**Or:**

- **STT 224 Introduction to Probability and Statistics for Ecologists** ............................ 3

**Or:**

- **STT 231 Statistics for Scientists** ............................ 3

**Or:**

- **STT 421 Statistics I** ............................ 3

**One of the following seven concentrations:**

#### General Zoology

**All of the following courses:** .......................... 11

- **ZOL 306 Invertebrate Biology** ............................ 4
- **ZOL 328 Comparative Anatomy and Biology of Vertebrates (W)** ............................ 4

**One course from each of the following three groups of courses:** ............................ 11 or 12

- **(a)** ZOL 341 Fundamental Genetics ............................ 4
- **ZOL 355 Ecology** ............................ 3
- **ZOL 355L Ecology Laboratory (W)** ............................ 4
- **ZOL 445 Evolution (W)** ............................ 3

- **(b)** ZOL 313 Animal Behavior ............................ 3
- **ZOL 483 Environmental Physiology (W)** ............................ 4
- **ZOL 425 Cells and Development (W)** ............................ 4

- **(c)** ZOL 320 Developmental Biology ............................ 4
- **ZOL 408 Histology** ............................ 4
- **ZOL 425 Cells and Development (W)** ............................ 4

- **(d)** ZOL 369 Introduction to Zoo and Aquarium Science ............................ 3
- **ZOL 445 Evolution (W)** ............................ 3
- **ZOL 449 Independent Study** ............................ 4

**A minimum of 3 credits in Zoology courses including the Zoology courses that satisfy the Tier II writing requirement referenced in item 1. above. Zoology courses that are not listed above must be approved in writing by the student's academic advisor. Courses offered by other departments may be substituted for Zoology courses with the written approval of the student's academic advisor.**

#### Cell and Developmental Biology

**All of the following courses:** .......................... 11

- **ZOL 341 Fundamental Genetics** ............................ 4
- **ZOL 355 Ecology** ............................ 3
- **ZOL 355L Ecology Laboratory (W)** ............................ 4
- **ZOL 445 Evolution (W)** ............................ 3

**One of the following courses:** ............................ 4

- **ZOL 320 Developmental Biology** ............................ 4
- **ZOL 425 Cells and Development (W)** ............................ 4

**Eight credits from the following courses:** ............................ 18

- **MMG 301 Introductory Microbiology** ............................ 3
- **MMG 302 Introductory Laboratory for General and Allied Health Microbiology** ............................ 1
- **ZOL 328 Comparative Anatomy and Biology of Vertebrates (W)** ............................ 4
- **ZOL 343 Genetics Laboratory** ............................ 3
- **ZOL 402 Neurobiology** ............................ 4
- **ZOL 408 Histology** ............................ 4
- **ZOL 450 Cancer Biology (W)** ............................ 3

**Either Biochemistry and Molecular Biology 461 and 462 combined, may be substituted for one of the courses listed above.**

**A minimum of 33 credits in Zoology courses including the Zoology courses that satisfy the Tier II writing requirement referenced in item 1. above. Zoology courses that are not listed above must be approved in writing by the student's academic advisor. Courses offered by other departments may be substituted for Zoology courses with the written approval of the student's academic advisor.**

#### Ecology, Evolution, and Organismal Biology

**All of the following courses:** .......................... 11

- **ZOL 341 Fundamental Genetics** ............................ 4
- **ZOL 355 Ecology** ............................ 3
- **ZOL 355L Ecology Laboratory (W)** ............................ 4
- **ZOL 445 Evolution (W)** ............................ 3

**One of the following courses:** ............................ 4

- **ZOL 306 Invertebrate Biology** ............................ 4
- **ZOL 328 Comparative Anatomy and Biology of Vertebrates (W)** ............................ 4

**One of the following courses:** ............................ 3 or 4

- **ZOL 313 Animal Behavior** ............................ 3
- **ZOL 320 Developmental Biology** ............................ 4
- **ZOL 341 Fundamental Genetics** ............................ 4
- **ZOL 355 Ecology** ............................ 3
- **ZOL 355L Ecology Laboratory (W)** ............................ 4
- **ZOL 445 Evolution (W)** ............................ 3
- **ZOL 449 Independent Study** ............................ 4
- **ZOL 369 Introduction to Zoo and Aquarium Science** ............................ 3
- **ZOL 489 Seminar in Zoo and Aquarium Science** ............................ 2
- **ZOL 498 Internship in Zoo and Aquarium Science** ............................ 4

**A minimum of 3 credits in Zoology courses including the Zoology courses that satisfy the Tier II writing requirement referenced in item 1. above. Zoology courses that are not listed above must be approved in writing by the student's academic advisor. Courses offered by other departments may be substituted for Zoology courses with the written approval of the student's academic advisor.**

#### Neurobiology and Animal Behavior

**All of the following courses:** ............................ 24

- **ZOL 313 Animal Behavior** ............................ 3
- **ZOL 320 Developmental Biology** ............................ 4
- **ZOL 341 Fundamental Genetics** ............................ 4
- **ZOL 355 Ecology** ............................ 3
- **ZOL 355L Ecology Laboratory (W)** ............................ 4
- **ZOL 402 Neurobiology** ............................ 4
- **ZOL 415 Ecological Aspects of Animal Behavior (W)** ............................ 3
- **ZOL 445 Evolution (W)** ............................ 3

**One of the following courses:** ............................ 4

- **ZOL 306 Invertebrate Biology** ............................ 4
- **ZOL 328 Comparative Anatomy and Biology of Vertebrates (W)** ............................ 4

**One of the following courses:** ............................ 3 or 4

- **PSY 413 Laboratory in Behavioral Neuroscience (W)** ............................ 4
- **ZOL 457 Foundations of Evolutionary Biology (W)** ............................ 4
- **ZOL 483 Environmental Physiology (W)** ............................ 4

**A minimum of 33 credits in Zoology courses including the Zoology courses that satisfy the Tier II writing requirement referenced in item 1. above. Zoology courses that are not listed above must be approved in writing by the student's academic advisor. Courses offered by other departments may be substituted for Zoology courses with the written approval of the student's academic advisor.**

#### Zoo and Aquarium Science

**All of the following courses:** ............................ 31

- **ZOL 313 Animal Behavior** ............................ 3
- **ZOL 320 Developmental Biology** ............................ 4
- **ZOL 328 Comparative Anatomy and Biology of Vertebrates (W)** ............................ 4
- **ZOL 341 Fundamental Genetics** ............................ 4
- **ZOL 355 Ecology** ............................ 3
- **ZOL 355L Ecology Laboratory (W)** ............................ 4
- **ZOL 369 Introduction to Zoo and Aquarium Science** ............................ 3
- **ZOL 445 Evolution (W)** ............................ 3
- **ZOL 489 Seminar in Zoo and Aquarium Science** ............................ 2
- **ZOL 498 Internship in Zoo and Aquarium Science** ............................ 4

**One of the following courses:** ............................ 4

- **FW 471 Ichthyology** ............................ 4
- **ZOL 360 Biology of Birds** ............................ 4
- **ZOL 365 Biology of Mammals** ............................ 4
- **ZOL 384 Biology of Amphibians and Reptiles (W)** ............................ 4

**One of the following courses:** ............................ 3 or 4

- **ANS 313 Principles of Animal Feeding and Nutrition** ............................ 4
- **ANS 314 Genetic Improvement of Domestic Animals** ............................ 4
- **ANS 315 Anatomy and Physiology of Farm Animals** ............................ 4
- **FW 444 Conservation Biology** ............................ 3
GRADUATE STUDY

The Department of Zoology offers Master of Science and Doctor of Philosophy degree programs in zoology. The department also offers a Master of Science in Zoo and Aquarium Management and a Doctor of Philosophy degree program in zoology-environmental toxicology.

The Department of Zoology is affiliated with the Doctor of Philosophy degree program with a major in ecology, evolutionary biology and behavior. For information about a Doctor of Philosophy degree program that involves ecology, evolutionary biology and behavior and a major in the Department of Zoology, refer to the statement on the doctoral program in ecology, evolutionary biology and behavior.

Students who are enrolled in master’s or doctoral degree programs in the Department of Zoology may elect an Interdepartmental Specialization in Cognitive Science. For additional information, refer to the statement on Interdepartmental Graduate Specializations in Cognitive Science in the College of Social Science section of this catalog. For additional information, contact the Department of Zoology.

Students who are enrolled in the Master of Science degree program in the Department of Zoology may elect specializations in ecology, evolutionary biology and behavior and in environmental toxicology. For additional information, refer to the statement on the Specialization in Ecology, Evolutionary Biology and Behavior and to the Graduate Specialization in Environmental Toxicology statement in the College of Agriculture and Natural Resources section of this catalog.

ZOO AND AQUARIUM MANAGEMENT

Master of Science

The objective of Master of Science in Zoo and Aquarium Management is to train professionals in the foundations of zoo and aquarium management and to develop business management and communication skills. The program should appeal to working professionals with Bachelor of Arts or Bachelor of Science degrees who wish to advance or change their careers.

In addition to meeting the requirements of the university and the College of Natural Science, students must meet the requirements specified below.

Requirements for the Master of Science Degree in Zoo and Aquarium Management

The student must complete 30 credits under Plan B (without thesis). The specific program of study, including an internship in collaboration with an industrial partner, must be approved by the student’s guidance committee. The final oral examination, which covers both course work and research, is administered by the student’s guidance committee.

1. The following Core courses (6 credits):
   - ZOL 892 Biodiversity .................................. 2
   - ZOL 897 Ecosystem Ecology .......................... 4

2. All of the following courses (16 credits):
   - ENT 442 Concepts of Biological Information Systems ...... 3
   - FW 444 Conservation Biology .......................... 3
   - GEO 459 Tourism in Regional Development ................ 3
   - PRR 443 Park and Recreation Planning and Design Concepts ...... 3
   - PRR 451 Park Interpretive Services and Visitor Information Systems .................................. 4
   - PRR 460 Resource and Environmental Economics ................. 3
   - PRR 485 Legal Aspects of Parks, Recreation, and Sport ........... 3
   - PRR 529 The Economics of Environmental Resources .......... 3
   - PRR 848 The Law and Leisure Services .................... 3
   - PRR 870 Park, Recreation and Natural Resources Marketing ..... 3
   - ZOL 851 Quantitative Methods in Ecology and Evolution ...... 3

3. Complete an internship with an industrial partner.

4. Pass a final oral examination.

5. All students in the program will be required to complete a Certificate Program in Basic Business and Communication Skills. The certificate program is organized as a series of week-end workshops covering such topics as project management, business law, intellectual property, management theory, finance, writing skills, presentation skills, information retrieval, interpersonal skills and group work. The certificate program offered by the faculty of the Eli Broad College of Business and the College of Communication Arts and Sciences, will include a case-study approach. It will normally be undertaken during the first year of enrollment and will involve an additional cost to the student beyond usual tuition and fees.

After the completion of the certificate program is approved by The Eli Broad College of Business and by the Associate Dean of the College of Natural Science, the Office of the Registrar will enter on the student’s academic record the name of the certificate program and the date it was completed. This certification will appear on the student’s transcript upon completion of the requirements for the degree program.

ZOOLOGY

The graduate degree programs in zoology are designed for students who seek a career in teaching and research in the biological sciences. The objectives of the programs are to provide the student with a broad knowledge of the field through courses and seminars and to prepare the student for independent and original research.
research in one of the various specialized subdisciplines of zoology. Faculty and staff provide expertise in a wide range of interests from molecular biology to ecosystem study. Areas of active research include genetics, cellular and developmental biology, animal diversity, systematics, paleontology, comparative morphology, physiology, behavior, and ecology and evolutionary biology. The studies of many types of animals include protozoology, invertebrate zoology, and vertebrate zoology, especially herpetology, ornithology, and mammalogy.

Students may obtain specialized graduate training through interdepartmental graduate programs. Zoology faculty are affiliated with interdepartmental graduate programs and research in genetics, cell and molecular biology, neuroscience, and ecology and evolutionary biology. Additional information about the doctoral programs in genetics and neuroscience, and about the Specialization in Ecology and Evolutionary Biology, may be found in other sections of this catalog. Students specializing in ecological research may take courses and carry out research at the W. K. Kellogg Biological Station located near Kalamazoo.

A brochure describing faculty research interests as well as information on admission, financial aid, and the requirements for the Master of Science and Doctor of Philosophy degrees is available from the department graduate office. Interested students are also encouraged to contact the Chairperson of the Graduate Affairs Committee for further information.

In addition to meeting the requirements of the university and of the College of Natural Science, students must meet the requirements specified below.

**Admission**

Regular admission to the graduate programs in zoology is granted to students having a bachelor’s degree, with training in the biological sciences at least equal to that required for this degree at Michigan State University; a grade–point average of 3.00 or better; and one year each of chemistry, physics, and mathematics. Satisfactory scores on the Graduate Record Examination General Test and approval of the department also are required. Students who do not meet the requirements for regular admission may, under certain circumstances, be admitted on a provisional basis while deficiencies are being corrected.

**Requirements for the Master of Science Degree**

The student must complete a total of 30 credits for the degree under either Plan A (with thesis) or Plan B (without thesis).

**ZOLOGY—ENVIRONMENTAL TOXICOLOGY**

**Doctor of Philosophy**

For information about the Doctor of Philosophy degree program in zoology—environmental toxicology, refer to the statement on Doctoral Program in Environmental and Integrative Toxicological Sciences in the Graduate Education section of this catalog.

**ABRAMS PLANETARIUM**

**D. David Batch, Director**

Abrams Planetarium, with its panoramic space science theater, is an acknowledged leader in the popularization of astronomy. The facility was financed by alumni and friends of the university through contributions to the Michigan State University Development Fund. Original gifts included $250,000 from Dr. and Mrs. Talbert Abrams. The building features a 140-seat Sky Theater housing the planetarium projector, a black light art gallery, an exhibit hall, and a gift shop.

This exciting astronomical and multimedia facility presents university instruction, public sky shows, observing sessions, and programs tailored to the needs of visiting elementary and secondary school children.

Star shows and other events are offered to the public on weekends and on special occasions. Visitors to the exhibit hall are welcome at the times of public presentations and from 9:00 a.m. to 1:00 p.m. to 4:30 p.m. on weekdays.

Call 1-517-355–4672 for recorded public show information, 332–STAR for recorded sky information, and 1-517-355–4676 to reach the Planetarium office. For further information visit www.pa.msu.edu/abrams.

**BIOLOGICAL SCIENCE PROGRAM**

The Biological Science Program office is responsible for the development and operation of a balanced core curriculum in general biology appropriate for majors and others interested in a comprehensive introduction to the field. Currently the core consists of the two semester sequence Biological Science 110, 111 and 111L. Advanced work and research projects for undergraduates are also coordinated by this office under Biological Science 499.
Laboratory was established in 1964. The Laboratory is administered jointly by the College of Natural Science and the College of Agriculture and Natural Resources under a grant from the U.S. Department of Energy.

The Laboratory conducts a broadly based research program which includes studies at the molecular, subcellular, cellular, tissue, organ, and organismal levels and draws on plant physiology, biochemistry, cell and molecular biology, genetics, and other disciplines. Among problems under investigation are photosynthesis; transduction of environmental information by the plant; effects of stress conditions upon growth and productivity; developmental biology of nitrogen fixing cyanobacteria; action of plant hormones; plant cell wall biosynthesis; mechanisms of tissue-specificity and protein targeting; molecular genetics of plant systems; genetic analysis of physiological traits; molecular mechanisms for plant gene expression; molecular biology of symbiotic nitrogen fixation; and molecular basis of disease resistance in plants. Emphasis is placed on the role of plants in energy conversion, consumption, and conservation.

The Laboratory provides facilities and support for students intending to proceed toward the Doctor of Philosophy degree, and for postdoctoral research associates. The doctoral degree programs are administered through academic units with which the Laboratory faculty have joint appointments, particularly the departments of Biochemistry and Molecular Biology, Crop and Soil Sciences, Microbiology and Molecular Genetics, and Plant Biology. The interdepartmental doctoral program in genetics that is administered by the College of Natural Science is also available. The student's admission and program of study are subject to the regulations and approval of the appropriate department and of either the College of Natural Science or the College of Agriculture and Natural Resources.

The aim of graduate work in the Laboratory is to give students training in independent research and to provide them with sufficient strength, both in biology and in the basic sciences, to enable them to keep in the forefront of their continuously changing and developing field. Doctoral programs consist of course work in advanced subjects and research leading to a dissertation.

To be accepted for graduate work in the Laboratory the student is generally expected to have at least the Bachelor of Science degree and to have had courses in organic chemistry, mathematics through calculus, physics, and general botany or biology. Courses in plant physiology, physical chemistry, and biochemistry are desirable. In the case of highly qualified students, part of the course requirements may be completed after admission to graduate work, but admission will in such cases be on a provisional basis until these requirements have been completed satisfactorily.

Graduate students are given freedom of choice in selecting, within the Laboratory, the areas of their research and their major advisors. These selections must be compatible with the Laboratory's objectives. Students are expected to spend the first two semesters following admission familiarizing themselves with the research programs of the Laboratory's staff and related research in other departments, including participation in several research projects, and to make their selection on this basis.

Because of the intensity of the program the student is expected to work on a year-round basis.
