The first college at the first land-grant institution, the College of Agriculture and Natural Resources is committed to advancing knowledge and transforming lives in communities, agriculture, and natural resources. The college provides innovative leadership in science, technology, design, management, biofuels, the bioeconomy, and international involvement. Academic programs in the college build on strong foundations in science, technology, engineering and mathematics (STEM). The wide selection of academic programs and career pathways include food, nutrition, and their applications to health; community, family and youth development; agricultural production; technology, management, and design; food processing; biofuels, the bioeconomy, globalization, international development, and sustainability.

Students learn to manage resources, people, and technology to improve the use, conservation and renewal of natural and created environments; develop sustainable systems; manage green spaces; enhance community and economic development; and advance food safety and nutrition. Graduates are employed as scientists, leaders, educators, managers, and stewards of human and natural resources.

The diverse disciplines and expertise in the college encompass research in animal and plant biotechnology, control of invasive species, control of pathogens, protection of biodiversity, management of urban sprawl, environmental remediation, wildlife management, use of biosensors to detect foodborne pathogens, tourism, ergonomics and lean construction, and the sustainability of agricultural and natural resource systems. Knowledge derived from research is integrated into course work and extended to benefit the community, state, nation and world – epitomizing the excellence of the land-grant tradition.

Educational programs nurture a learning environment that educates and prepares students for graduate study and/or for leadership in local, state, national, and international arenas. Graduates of the college have the tools they need to undertake endeavors that ensure the sustainability of food, prosperity and leisure activities in a world environment that has finite resources. For those interested in short-term certificate programs, the Institute of Agricultural Technology offers a variety of technical programs that are less than two years in length.

UNDERGRADUATE PROGRAMS

Personal attention is a key aspect of all college programs, and undergraduate research is promoted and encouraged. The college offers a highly student-oriented advising system. Students are assigned an academic advisor to suggest courses and career emphases. In the student-advisor relationship, the capabilities, aspirations and goals of the students remain paramount throughout their academic careers. Academic advisors work closely with students from the time they express an interest in the major, and undergraduate research is encouraged in all majors.

For students who desire one of the degree options available through the college, but wish to delay their choice of a specific major until a later date, a no-preference program is offered. Under this arrangement, freshmen enrolled in the Neighborhood Student Success Collaborative may designate their major preference as Agriculture and Natural Resources No-Preference. Students selecting this major preference are advised by faculty members in the College of Agriculture and Natural Resources. Through careful selection of courses, they are encouraged to explore a variety of areas to help in selecting a major. The key element of this program is its flexibility. Students may remain in it until they attain sophomore or junior standing, or
they may select other major preferences at any time before becoming juniors.

Bachelor of Science degree programs are offered in the following areas: Agribusiness Management; Agriculture, Food and Natural Resources Education; Animal Science; Construction Management; Crop and Soil Sciences; Dietetics; Entomology; Environmental Economics and Management; Environmental Studies and Sustainability; Fisheries and Wildlife; Food Industry Management; Food Science; Forestry; Horticulture; Nutritional Sciences; Packaging; and Sustainable Parks, Recreation and Tourism. A Bachelor of Arts degree program in Interior Design and a Bachelor of Landscape Architecture degree program in Landscape Architecture are also offered.

The College of Agriculture and Natural Resources cooperates with the College of Engineering in offering an undergraduate program in Biosystems Engineering. The college also participates with the College of Social Science in offering an undergraduate program in Urban and Regional Planning.

Students who are enrolled in bachelor's degree programs in the college may elect the Minor in Environmental and Sustainability Studies. For additional information, refer to the statement on Minor in Environmental and Sustainability Studies in the College of Natural Science section of this catalog.

Honors Study

The College of Agriculture and Natural Resources encourages honors students to develop enriched and distinctive undergraduate programs. In each of the career pathways offered in the college, members of the faculty are carefully selected to serve as departmental Honors College advisors. These advisors assist each Honors College student in planning a rigorous and balanced program that reflects individual interests and competencies. In addition to the university-wide array of introductory Honors courses available to exceptional students, the college encourages participation in research and enrollment in graduate courses and independent study.

Opportunities for Individual Emphasis

In furthering the students' education, the flexible nature of the program in each major makes it possible for students to pursue areas of special interest through regular course work, special seminars, research and travel. By anticipating new and growing areas of need for trained personnel, the college makes it possible for students to prepare themselves adequately in these areas. Following are a few of the opportunities for special emphasis available to students in any major within the college.

International Study. The college offers opportunities for short-term and semester-length study abroad programs around the world. Undergraduates are encouraged to make a study abroad experience part of their curriculum. In addition, students in the College of Agriculture and Natural Resources, and others interested in agricultural development abroad, may select courses from numerous subject areas. Offerings in agricultural economics, agricultural engineering, animal science, crop and soil sciences, extension personnel development, forestry, horticulture and resource development have special relevance to international agriculture and rural development. Emphasis is placed on environmentally sound crop and animal production, application of new technical knowledge, planning and administration, and efficient use of human and natural resources for developing countries.

Science Emphasis. Many students realize early in their college years that they wish to prepare for careers in research or university teaching. Academic advisors assist them in selecting science courses (biological, physical and social) and mathemat-
The student must complete:

b. Economics 201 or 202.

c. At least 26 credits in courses in the college.

d. The specific requirements for a major in the college.

Students who are enrolled in bachelor's degree programs in the College of Agriculture and Natural Resources may elect a Minor in Environmental and Sustainability Studies. For additional information, refer to the Minor in Environmental and Sustainability Studies statement in the College of Natural Science section of this catalog.

MINOR IN LEADERSHIP IN INTEGRATED LEARNING

The Minor in Leadership in Integrated Learning is available to persons who meet specified requirements. The Minor in Environmental and Sustainability Studies is also available for teacher certification.

In addition, vocational endorsement in agricultural education is available to persons who meet specified requirements.

Students who elect the agriculture, food and natural resources education disciplinary major, or the agriculture, food and natural resources education disciplinary minor, must contact the Department of Community Sustainability.

For additional information, refer to the statement on the agriscience disciplinary major and to the statement on TEACHER CERTIFICATION in the Department of Teacher Education section of this catalog.

Requirements for the Minor in Leadership in Integrated Learning

The student must complete:

1. An individualized plan of study approved by the Director of the Bailey Scholars Program including:

a. All of the following courses:.............................. 9

ANR 210 Pathways in Integrated Learning ................................. 3

ANR 410 Integrated Learning Seminar I .................................. 3

ANR 410 Integrated Learning Transitions ................................. 3

b. At least 9 additional credits in approved courses. A list of approved courses is available from the Director.

要求

学生必须完成:

b. 经济学 201 或 202。

c. 至少 26 个学分的课程在学院。

d. 学院的特定要求。

学生在学院的本科学位课程中可以选修环境与可持续性研究的副修。更多信息，请参阅学院的环境与可持续性研究声明。学院的农业、食品和自然资源教育副修也在为教师认证提供。

此外，农业教育的职业执照也可以提供给符合要求的人。学生选择农业、食品和自然资源教育的农业科学专业或农业、食品和自然资源教育的农业科学副修，必须联系社区可持续发展部门。

有关更多信息，请参阅学院的农业科学专业副修和教师认证声明。
Students who are enrolled in master's and doctoral degree programs may elect the Graduate Certificate in Forest Carbon Science, Policy and Management. For additional information, refer to the statement on Graduate Certificate in Forest Carbon Science, Policy and Management in the Department of Forestry section of this catalog.

Students who are enrolled in doctoral degree programs in departments and programs emphasizing environmental science and policy may elect the Graduate Specialization in Environmental Science and Policy. For additional information, refer to the Graduate Specialization in Environmental Science and Policy statement in the College of Social Science section of this catalog.

Students who are enrolled in master’s and doctoral degree programs in the College of Agriculture and Natural Resources, the College of Natural Science, and the College of Veterinary Medicine may elect the Graduate Specialization in Fish and Wildlife Disease Ecology and Conservation Medicine. For additional information, refer to the statement on Graduate Specialization in Fish and Wildlife Disease Ecology and Conservation Medicine.

Students who are enrolled in Master of Science degree programs in the departments of Agricultural, Food, and Resource Economics, Biosystems and Agricultural Engineering, Animal Science, Entomology, Food Science and Human Nutrition, Horticulture, and Packaging may elect a Specialization in Food Safety. For additional information, refer to the statement on the specialization in the College of Veterinary Medicine section of this catalog.

Students who are enrolled in Master of Science and Doctor of Philosophy degree programs in the Department of Food Science and Human Nutrition may elect a Interdepartmental Graduate Specialization in Infancy and Early Childhood. For additional information, refer to the statement on Interdepartmental Graduate Specializations in Infancy and Early Childhood in the College of Social Science section of this catalog.

Students who are enrolled in Master of Science and Doctor of Philosophy degree programs in the departments of Agricultural, Food, and Resource Economics; Fisheries and Wildlife; or Forestry may elect a Graduate Specialization in Environmental and Resource Economics. For additional information, refer to the statement on Interdepartmental Graduate Specializations in Environmental and Resource Economics.

**Master of Science**

In addition to meeting the requirements of the university, students must meet the requirements specified below.

**Admission**

Acceptance of an applicant is determined by the department in which the applicant wishes to do his or her major work, with the approval of the dean of the college, after consideration of the applicant's academic record, experience, personal qualifications, and objectives. Applicants who are admitted are classified in one of two groups: regular, for students who are fully qualified to undertake master's degree programs, or provisional, for students who have some remediable inadequacy of qualifications, or deficiency in subject matter preparation.

Normally an undergraduate grade–point average of 3.00 (B) or higher is required for admission to any status. Credits earned in regular or provisional status are acceptable as part of a student's degree requirements upon approval of the major professor and the dean.

**Requirements for the Master of Science Degree**

**PROGRAM.** The student, in consultation with the major professor, develops the prescribed program of study. The program should be established at the earliest possible date, consistent with departmental requirements, and filed with the department and the dean. Two plans of study are available:

- **Plan A**—Completion of a research program and preparation of a satisfactory thesis are required. Research credits must equal at least 6, but not more than 10.

- **Plan B**—Preparation of a thesis is not required. The program may include research or special problems not exceeding 6 credits.

**Academic Standards**

FOR RETENTION. The major professor and department in which the student is majoring review and make a decision concerning the retention of any student failing to fulfill departmental requirements, and may dismiss a student at the end of any semester. Notice of dismissal from a departmental program is given to the student by the department chairperson, and the dean is notified of such action.

**Residence**

The student should spend at least one full semester in residence on campus. At least 8 credits excluding research must be taken in course work on the campus in East Lansing.

**Doctor of Philosophy**

The Doctor of Philosophy degree is granted for distinctive attainment by the student in a special field, as evidenced by a dissertation which shows independent and creative thought and by passing detailed examinations over the student's chosen fields.

In addition to meeting the requirements of the university, students must meet the requirements specified below.

**Admission**

Acceptance of an applicant is determined by the department in which the applicant wishes to do his or her major work, with the approval of the dean of the college, after consideration of the applicant's academic record, experience, personal qualifications, and objectives. Applicants who are admitted are classified in one of two groups: regular, for students whose records and qualifications show that they are ready to pursue a course of study toward the doctorate, or provisional, for students who, although their previous work appears to have been at an acceptably high academic level, nevertheless lack some important requirements for the course of study they intend to follow toward the doctorate. Such deficiencies will often necessitate the completion of collateral courses for which credit will not be counted toward the degree.
Normally a grade–point average of 3.00 (B) or higher in all previous academic work is required for admission to regular or provisional status.

Admission is open to students with a master's or bachelor's degree or their equivalents; however, applicants meeting these requirements are not guaranteed admission into a doctoral program. Some departments may require completion of a master's degree prior to admission into the doctoral program.

Credits earned in regular or provisional status are acceptable as part of a student's degree requirements upon approval by the guidance committee and the dean.

Examinations

COMPREHENSIVE. A comprehensive knowledge of the student's major and related fields must be demonstrated by examination, written or written and oral, to the guidance committee. If the student fails to pass, there may not be a reexamination until after one semester of additional work toward the degree is completed.

FINAL. The final oral examination, primarily in defense of the dissertation, is conducted by the guidance committee, supplemented, at the discretion of the dean, by two appointed faculty members. Other faculty members may attend at the chairperson's discretion. The final oral examination cannot be conducted before the dissertation is in the final form unbound.

Academic Standards

FOR RETENTION. The guidance committee and the department in which the student is majoring review and make a decision concerning the retention of any student failing to fulfill departmental requirements, and may dismiss a student at the end of any semester. Notice of dismissal from a departmental program is given to the student by the department chairperson, and the dean is notified of such action.

Residence

One year of residence after completion of the master's degree or its equivalent is required. This permits the student to work with and under the direction of the faculty, and to engage in independent and cooperative research utilizing university facilities. Normally, the year of residence will be made up of two semesters involving completion of at least 9 credits of graduate work each semester.

INTERDEPARTMENTAL GRADUATE PROGRAM in PLANT BREEDING, GENETICS and BIOTECHNOLOGY

The interdepartmental graduate program in Plant Breeding, Genetics and Biotechnology is jointly administered by the departments of Crop and Soil Sciences, Forestry, Horticulture, and Plant Biology. Faculty who have been identified by the chairpersons of these departments are members of the Plant Breeding, Genetics and Biotechnology Program. One member of the faculty is designated as the Coordinator and oversees the program.

The interdepartmental graduate program in Plant Breeding, Genetics and Biotechnology is designed to:

1. Provide contemporary graduate education and training in the field of plant breeding and genetics, so that students may be prepared to teach, conduct independent research, and use modern technologies.
2. Enable students to gain knowledge in the various disciplines that support plant breeding activities through course work in such fields as biochemistry, plant physiology, entomology, plant pathology, and food science.
3. Provide an intellectual and resource environment conducive to graduate research.
4. Foster an awareness of plant breeding and genetics programs in both the public and private sectors.

Master of Science

In addition to meeting the requirements of the university and of the College of Agriculture and Natural Resources, students must meet the requirements specified below.

Admission

A student seeking admission to the Plant Breeding, Genetics and Biotechnology program at the master's level must have completed a Bachelor of Science degree in a plant science or related field with an emphasis on plant breeding and genetics. A minimum grade–point average of 3.00 in courses in agricultural, biological, and physical sciences and an academic background sufficient to indicate probable success in the program are required.

To be considered for admission to the program, the student must be accepted as an advisee by a faculty member in the student's major department who is also a member of the Plant Breeding, Genetics and Biotechnology faculty. Admission to the program is by approval of one of the four participating departments, the Plant Breeding, Genetics and Biotechnology faculty, and the Coordinator of the Plant Breeding, Genetics and Biotechnology Program. In special cases, applicants with deficiencies in background courses may be admitted on a provisional basis. Such students will not be considered for advanced degrees until they have fulfilled the requirements for admission to regular status.

Requirements for the Master of Science Degree

The student's guidance committee, selected in consultation with the student and the major professor at the time that the student is admitted to the program, plans the student's course of study with the student's particular interests, capabilities, and professional goals in mind. The student's guidance committee is composed of three faculty members; the student's major professor and at least one other person must be members of the Plant Breeding, Genetics and Biotechnology faculty. At least one member must be from a department other than the one that administers the student's major.

Only Plan A (with thesis) is available. The student is required to complete courses, learn research methodologies, and conduct thesis research pertinent to the plant species under study. The student must complete two credits of Horticulture 892, and two core courses as specified by the Plant Breeding, Genetics and Biotechnology faculty. Credits in Master's Thesis Research (course number 899) must total at least 6 but not more than 10. One semester of teaching experience is also required. The student's program will be reviewed by the Plant Breeding, Genetics and Biotechnology faculty. The degree is conferred upon recommendation of the department, the Coordinator of the Plant Breeding, Genetics and Biotechnology Program, and the Dean of the college.

Doctor of Philosophy

In addition to meeting the requirements of the university and of the College of Agriculture and Natural Resources, students must meet the requirements specified below.
Admission

A student seeking admission to the Plant Breeding, Genetics and Biotechnology program at the doctoral level must have completed a Bachelor or Master of Science degree in the plant sciences with an emphasis on plant breeding and genetics. A minimum grade-point average of 3.00 is required.

To be considered for admission to the program, the student must be accepted as an advisee by a faculty member in the student's major department who is also a member of the Plant Breeding, Genetics and Biotechnology faculty. Admission to the program is by approval of one of the four participating departments, the Plant Breeding, Genetics and Biotechnology faculty, and the Coordinator of the Plant Breeding, Genetics and Biotechnology Program.

Requirements for the Doctor of Philosophy Degree

The guidance committee, selected in consultation with the student and the major professor at the time that the student is admitted to the program, plans the student's course of study with the student's particular interests, capabilities, and professional goals in mind. The student's guidance committee is composed of four faculty members; the student's major professor and at least one other person must be members of the Plant Breeding, Genetics and Biotechnology faculty. At least one member must be from a department other than the one that administers the student's major.

The student is required to complete courses, learn research methodologies, and conduct dissertation research pertinent to the plant species under study. The student must complete at least 12 credits in 800–level plant breeding and genetics courses including four credits of Horticulture 892, and two core courses as specified by the Plant Breeding, Genetics and Biotechnology faculty. One semester of teaching experience is also required.

The student's program is subject to review by the Plant Breeding, Genetics and Biotechnology faculty. The degree is conferred upon recommendation of the department, the Coordinator of the Plant Breeding, Genetics and Biotechnology Program, and the Dean of the college.

GRADUATE SPECIALIZATION in ENVIRONMENTAL TOXICOLOGY

The College of Agriculture and Natural Resources, the College of Natural Science, and the College of Veterinary Medicine administer the Graduate Specialization in Environmental Toxicology. The College of Agriculture and Natural Resources is the primary administrative unit.

The specialization is available as an elective to students who are enrolled in master's degree programs in the departments of Animal Science, Community Sustainability, Crop and Soil Sciences, Entomology, Fisheries and Wildlife, Food Science and Human Nutrition, Geological Sciences, Pathobiology and Diagnostic Investigation, Plant, Soil and Microbial Sciences, and Zoology. The specialization is designed for students who are interested in combining study in their disciplines with study in environmental toxicology, and in applying their knowledge to solve environmental problems.

A faculty member who is in the department that administrates the student's degree program and who is associated with the Specialization in Environmental Toxicology will serve as the student's academic advisor for the specialization. The academic advisor will assist the student in planning a program of study that is related to the student's interests, capabilities, and professional goals. With the approval of the department and college that administers the student's degree program, the courses that are used to satisfy the requirements for the specialization may also be used to satisfy the requirements for the master's degree.

Requirements for the Graduate Specialization in Environmental Toxicology

The student's program of study must be approved by the student's academic advisor for the specialization. The student must meet the requirements specified below:

1. Have a grade–point average of at least 3.00 in the courses that are used to satisfy the requirements for the specialization.
2. Complete the following courses (6 credits):
   - CSUS 846 Law of Environmental Regulation ........................................ 3
   - PHM 450 Introduction to Chemical Toxicology ...................................... 3
3. Complete two courses from any of the five categories listed below (6 to 8 credits):
   - Environmental Dynamics
     - CSS 455 Environmental Pollutants in Soil and Water .......................... 3
     - ENE 481 Environmental Chemistry: Equilibrium Concepts .................. 3
     - ENE 801 Dynamics of Environmental Systems ........................................ 3
     - ENE 821 Groundwater Hydraulics ...................................................... 3
     - GLG 421 Environmental Geochemistry ................................................ 4
     - GLG 821 Aquaeous Geochemistry ...................................................... 3
     - MMG 425 Microbial Ecology ............................................................. 3
     - ZOL 897 Ecosystem Ecology and Global Change .................................... 4
   - Economics, Policy, and Law
     - AFRE 410 Institutional and Behavioral Economics ............................ 3
     - AFRE 829 Economics of Environmental Resources ................................ 3
     - CSUS 425 Environmental Impact Assessment ........................................ 4
     - Waste Management
     - ENE 483 Water and Wastewater Treatment ......................................... 3
     - ENE 487 Microbiology for Environmental Science and Engineering ........... 3
     - ENE 804 Biological Processes in Environmental Engineering ............... 3
     - Analytical Chemistry
       - CEM 335 Analytical Chemistry I .................................................... 3
       - CEM 336 Analytical Chemistry II .................................................... 3
     - CEM 645 Structure and Spectroscopy of Organic Compounds .................. 3
   - Mechanisms of Toxicity
     - ANS 407 Food and Animal Toxicology .............................................. 3
     - BMB 960 Selected Topics in Biochemistry I ......................................... 3
     - FSC 807 Advanced Food Toxicology .................................................. 3
     - Biochemistry and Molecular Biology 960 may be counted toward the re-
       quirements for the specialization only when the topic deals with environ-
       mental toxicology.
4. Attend a minimum of six seminars in environmental toxicology.

GRADUATE SPECIALIZATION in FISH AND WILDLIFE DISEASE ECOLOGY AND CONSERVATION MEDICINE

The Specialization in Fish and Wildlife Disease Ecology and Conservation Medicine is designed to provide students with improved understanding of the likely consequences of increased contact between fish and wildlife, domestic animals and human populations for emergence and spread of infectious diseases. Students will gain a sound understanding of the basis of fish and wildlife disease, and an appreciation of the diagnostic and surveillance tools needed to move toward effective disease control among wild populations and ecosystems. Students will also obtain the skills that will enable them to work effectively within interdisciplinary and interagency teams to develop disease surveillance, control, and prevention plans.

The specialization which is administered by the Department of Fisheries and Wildlife and the College of Agriculture and Natural Resources, is available as an elective to master's and doctoral students in the College of Agriculture and Natural Resources, the College of Natural Science, and the College of Veterinary Medicine. Students enrolled in Plan A (thesis) master's programs are encouraged to develop thesis topics which integrate their chosen discipline with the interdisciplinary focus integral to this specialization. It is designed for students who are interested in combining study in their disciplines with the study of fish and wildlife disease ecology and in applying their knowledge to the management of emerging and recurring disease in fish and wildlife populations and in ecosystems.
With the approval of the department or school and college that administers the student’s degree program, courses that are used to satisfy the requirements for the specialization may also be used to satisfy the requirements for the graduate degree program. The student’s program of study must be approved by the student’s academic advisor for the specialization.

Requirements for the Specialization in Fish and Wildlife Disease Ecology and Conservation Medicine

The student must:

1. Complete all of the following courses (10 credits):
   - FW 423 Principles of Fish and Wildlife Disease: 3
   - FW 423L Principles of Fish and Wildlife Disease Laboratory: 1
   - FW 463 Wildlife Disease Ecology: 3
   - FW 821 Conservation Medicine: 3

2. Students must provide evidence of background and/or education in epidemiology and or quantitative methods. Typically, this background or education will be in the form of successful completion of one semester-long course in each of these areas. Course work taken prior to entering the graduate specialization can be used to satisfy this requirement. Waiver of this requirement requires review by the advisor for the specialization.

3. Master’s and doctoral students will complete a thesis or dissertation reflecting the integration of the student’s discipline.

GRADUATE SPECIALIZATION in GENDER, JUSTICE, and ENVIRONMENTAL CHANGE

The Graduate Specialization in Gender, Justice, and Environmental Change is administered by the College of Agriculture and Natural Resources and the College of Social Science. The primary administrative unit for this specialization is the College of Agriculture and Natural Resources.

The Graduate Specialization in Gender, Justice, and Environmental Change is available as an elective for students who are enrolled in master’s and doctoral programs at Michigan State University. The goal of this program is to provide graduate students enrolled in master’s and doctoral programs at Michigan State University. The primary administrative unit for this specialization is the College of Agriculture and Natural Resources. The faculty who participate in this specialization comprise the core faculty may change with the mutual consent of the chairpersons of the departments, upon recommendation of the Coordinating Committee.

The College of Agriculture and Natural Resources and the College of Social Science jointly administer the specialization. The Graduate Specialization in Gender, Justice, and Environmental Change in the College of Agriculture and Natural Resources. To be admitted to the specialization, a student must have been admitted to a graduate program at Michigan State University.

With the approval of the department and college that administer the student’s degree program, courses that are used to satisfy the requirements for the specialization may also be used to satisfy the requirements for a master’s or doctoral degree.

Requirements for the Specialization in Gender, Justice, and Environmental Change

The student must complete a total of 12 credits:

1. Both of the following courses:
   - ANP 859 Gender, Justice, and Environmental Change: Methods and Application: 3
   - FW 858 Gender, Justice, and Environmental Change: Issues and Concepts: 3

INTERDEPARTMENTAL GRADUATE SPECIALIZATIONS in ENVIRONMENTAL AND RESOURCE ECONOMICS

The interdepartmental graduate specialization in environmental and resource economics is an elective for students in all graduate majors. The specialization is designed to:

1. Provide an opportunity for graduate students to obtain advanced training in the field of environmental and natural resource economics.

2. Develop an intellectual environment, which will foster the growth of research and public service in the area of environmental and natural resource economics.

3. Foster an understanding among graduate students of the career opportunities and professional responsibilities in the areas of environmental and natural resource economics.

4. Increase public awareness of environmental and natural resource problems and alternative solutions.

Students who elect this graduate specialization seek a high degree of proficiency in the economic analysis of environmental and natural resource problems. The specialization is suitable for graduate students who intend to specialize in this area of economic analysis, as well as for those who may have a departmental major in a non-economic aspect of the environment and natural resources, but who want to deepen their understanding of how economics influences their major area of study.

The College of Agriculture and Natural Resources and the College of Social Science jointly administer the specialization. The College of Agriculture and Natural Resources is the primary administrative unit. The faculty who participate in this specialization are drawn from the departments of Agricultural, Food, and Resource Economics; Community, Agriculture, Recreation and Resource Studies, Economics; Fisheries and Wildlife; and Forestry.

Core faculty are selected by the chairpersons of the six participating departments. Each department designates one core faculty member to serve on a Coordinating Committee for the Specialization in Environmental and Resource Economics. The Coordinating Committee oversees the policies and program requirements adopted by the core faculty.

Requirements for the Specializations in Environmental and Resource Economics

Master’s Students: The specialization consists of the completion of approximately 18 credits of resource economics and methods courses specified by the coordinating committee and approved by the core faculty. Credits in courses taken for the specialization may be counted toward the requirements for the student’s major at the discretion of the major department. At least one core faculty member serves on the student’s guidance committee.

Doctoral Students: The specialization consists of the completion of approximately 24 credits of resource economics and methods courses, and passing a written examination. Course work is specified by the coordinating committee and approved by the core faculty. The examination committee consists of three core faculty members selected by the Coordinating Committee.
Credits in courses taken to meet the requirements of the specialization may be used for a student's major at the discretion of the student's major department. At least one core faculty member serves on the student's guidance committee.

**AGRICULTURE and NATURAL RESOURCES NO–PREFERENCE UNDERGRADUATE PROGRAM**

An Agriculture and Natural Resources no–preference program is offered for students selecting the College of Agriculture and Natural Resources but desiring to delay their choice of a specific field until a later date. The program is basic to all majors offered by the College of Agriculture and Natural Resources and permits the student flexibility with respect to major choice. Students may remain in this no–preference program until they attain junior standing, or they may select major preferences at any time prior to becoming juniors.

**DEPARTMENT of AGRICULTURAL, FOOD, and RESOURCE ECONOMICS**

*Titus O. Awokuse, Chairperson*

The department administers highly successful undergraduate and graduate programs in applied economics and management with a focus on agriculture, food, and natural resources.

**UNDERGRADUATE PROGRAMS**

The department offers three undergraduate majors: agribusiness management, environmental economics and management, and food industry management. These majors emphasize the application of business and social sciences to the management of public and private sector organizations. Each major is built on a liberal education base with a core of professional courses and sufficient electives for students and their advisors to tailor individualized programs.

**AGRIBUSINESS MANAGEMENT**

The agribusiness management major is designed for students who are interested in careers with agricultural input supply, agricultural production, commodity assembly and processing, and agricultural marketing organizations. The program, which focuses on the managerial functions performed by organizations throughout the agribusiness sector, provides a system–wide perspective of managerial problems confronting such organizations. Faculty who are associated with the program maintain close relationships with agribusiness companies. Those relationships benefit students who seek information about careers, scholarships, and employment in the field.

**Requirements for the Bachelor of Science Degree in Agribusiness Management**

1. The University requirements for bachelor's degrees as described in the Undergraduate Education section of this catalog; 120 credits, including general elective credits, are required for the Bachelor of Science degree in Agribusiness Management.

2. The requirements of the College of Agriculture and Natural Resources for the Bachelor of Science degree.

   Certain courses referenced in requirement 3. below may be counted toward College requirements as appropriate.

   Students must achieve a grade of at least 2.0 or higher in each ABM and FIM and EEM course referenced in items 3. a. and in all courses taken to fulfill requirements 3. b. and 3. c.

   Food Industry Management 439 and Environmental Economics and Policy 405 may be used to fulfill requirement 3. b. if it is not used to fulfill requirement 3. c. Agribusiness Management 130 may be used to fulfill requirement 3. b. if it is not used to fulfill requirement 3. e.

3. The following requirements for the major:

   **CREDITS**

   a. All of the following courses: ............................................. 44
      ABM 100 Decision-making in the Agri-Food System .................. 3
      ABM 203 Data Analysis for the Agri-Food System .................. 3
      ABM 210 Professional Seminar in Agribusiness Management ............. 1
      ABM 222 Agribusiness and Food Industry Sales (W) .................. 3
      ABM 225 Commodity Marketing I .......................................... 3
      ABM 410 Advanced Professional Seminar in Agribusiness Management ......... 1
      ABM 422 Vertical Coordination in the Agri-Food System .................. 3
      ABM 435 Financial Management in the Agri-Food System .............. 3
      EC 201 Introduction to Microeconomics ................................ 3
      EC 202 Introduction to Macroeconomics ................................ 3
      EEM 260 World Food, Population and Poverty .......................... 3
      FIM 220 Food Product Marketing .......................................... 3
      MKT 327 Introduction to Marketing ....................................... 3
      MTH 124 Survey of Calculus I ............................................ 3
      SCM 304 Survey of Supply Chain Management .......................... 3

   b. Four of the following courses: ............................................. 12
      ABM 130 Farm Management I ............................................. 3
      ABM 203 Data Analysis for the Agri-Food System .................. 3
      ABM 210 Professional Seminar in Agribusiness Management ............. 1
      ABM 222 Agribusiness and Food Industry Sales (W) .................. 3
      ABM 225 Commodity Marketing I .......................................... 3
      ABM 410 Advanced Professional Seminar in Agribusiness Management ......... 1

**FOOD INDUSTRY MANAGEMENT**

The food industry management major is designed for students who are interested in careers in the food industry. Graduates of this major enter managerial positions with food wholesalers-distributors and retailers as well as sales, account management, and production supervision positions with food manufacturers.

The program provides a system-wide perspective of managerial problems confronting firms in the food industry, recognizes the increasing interdependence among such firms and focuses on creating consumer value. Faculty who are associated with the program maintain close relationships with food companies and trade associations, bring practical applications and examples to the classroom and provide current information about career and scholarship opportunities.

**Requirements for the Bachelor of Science Degree in Food Industry Management**

1. The University requirements for bachelor’s degrees as described in the Undergraduate Education section of this catalog; 120 credits, including general elective credits, are required for the Bachelor of Science degree in Food Industry Management.

The requirements for the Food Industry Management major is met by completing Food Industry Management 439. This course is referenced in item 3.b.

The completion of the Food Industry Management mathematics requirement may also satisfy the College of Agriculture and Natural Resources and the University mathematics requirement.

2. The requirements of the College of Agriculture and Natural Resources for the Bachelor of Science degree.

Certain courses referenced in requirement 3.b. below may be counted toward College requirements as appropriate.

Students must achieve a grade of at least 2.0 or higher in each ABM and FIM and EEM course referenced in items 3.a. and in courses taken to fulfill requirements 3.b. and 3.c.

Agribusiness Management 435 may be used to fulfill requirement 3. b. if it is not used to fulfill requirement 3. c.

Environmental Economics and Management 405 may be used to fulfill requirement 3. b. if it is not used to fulfill requirement 3. c.

Agribusiness Management 130 may be used to fulfill requirement 3. b. if it is not used to fulfill requirement 3. d.

3. The following requirements for the major:

   a. All of the following courses:

      | Course Name                                      | Credits |
      |-------------------------------------------------|---------|
      | ABM 100 Decision-making in the Agri-Food System | 3       |
      | ABM 203 Data Analysis for the Agri-Food System  | 3       |
      | ABM 222 Agribusiness and Food Industry Sales (W)| 3       |
      | ACC 230 Survey of Accounting Concepts            | 3       |
      | EC 201 Introduction to Microeconomics            | 3       |
      | EC 202 Introduction to Macroeconomics            | 3       |
      | EEM 260 World Food, Population and Poverty       | 3       |
      | FIM 210 Professional Seminar in Food Industry    | 1       |
      | FIM 220 Food Product Marketing                   | 3       |
      | FIM 335 Food Marketing Management                | 3       |
      | FIM 410 Advanced Professional Seminar in Food    | 1       |
      | FIM 439 Food Business Analysis and Strategic     | 3       |
      | Planning (W)                                    |         |
      | FIM 460 Retail Information Systems               | 3       |
      | MGT 327 Introduction to Marketing                | 3       |
      | MTH 124 Survey of Calculus I                     | 3       |
      | SCM 304 Survey of Supply Chain Management        | 3       |

   b. Four of the following courses:

      | Course Name                                      | Credits |
      |-------------------------------------------------|---------|
      | ABM 130 Farm Management I                       | 3       |
      | ABM 225 Commodity Marketing I                    | 3       |
      | ABM 400 Public Policy Issues in the Agri-Food System | 3     |
      | ABM 422 Vertical Coordination in the Agri-Food System | 3     |
      | ABM 425 Commodity Marketing II                   | 3       |
      | ABM 427 Global Agri-Food Industries and Markets  | 3       |
      | ABM 430 Farm Management II                      | 3       |
      | ABM 435 Financial Management in the Agri-Food    | 3       |
      | System                                          |         |
      | EEM 255 Ecological Economics                     | 3       |
      | EEM 405 Corporate Environmental Management (W)   | 3       |
      | FIM 224 Information and Market Intelligence in the Agri-Food Industry | 3     |
      | FIM 415 Human Resource Management and Challenges | 3       |
      | FIM 493 Professional Internship in Food Industry Management | 3     |

   c. One of the following courses:

      | Course Name                                      | Credits |
      |-------------------------------------------------|---------|
      | ABM 435 Financial Management in the Agri-Food    | 3       |
      | System                                          |         |
      | EEM 405 Corporate Environmental Management       | 3       |

   d. One of the following courses:

      | Course Name                                      | Credits |
      |-------------------------------------------------|---------|
      | ABM 130 Farm Management I                       | 3       |
      | FIM 320 Introduction to Finance                 | 3       |

   e. One of the following courses:

      | Course Name                                      | Credits |
      |-------------------------------------------------|---------|
      | STT 200 Statistical Methods                      | 3       |
      | STT 201 Statistical Methods                      | 3       |
      | STT 315 Introduction to Probability and Statistics for Business | 3     |

   f. One of the following courses:

      | Course Name                                      | Credits |
      |-------------------------------------------------|---------|
      | ABM 303 Economics of Decision Making in the Agri-Food System | 3     |
      | EC 301 Intermediate Microeconomics               | 3       |

   g. Complete 6 credits in sciences related to agricultural production and processing, food production and processing, or sustainability and the environment, as approved by the academic advisor.

**ENVIRONMENTAL ECONOMICS AND MANAGEMENT**

Environmental Economics and Management prepares students for careers that require successful reconciliation of environmental sustainability and economic performance goals for businesses.

The major develops skills in core business disciplines, environmental economics, and environmental policy analyses, and applies these skills and knowledge to help manage or create environmentally-sustainable and socially-responsive business organizations that also deliver shareholder value. The major prepares students for employment opportunities with industry, environmental consulting firms, state and federal government agencies, and environmental interest groups. The major also offers students the opportunity to prepare for graduate study in business or environmental economics and policy studies programs.

**Requirements for the Bachelor of Science Degree in Environmental Economics and Management**

1. The University requirements for bachelor’s degrees as described in the Undergraduate Education section of this catalog; 120 credits, including general elective credits, are required for the Bachelor of Science degree in Environmental Economics and Management.

The University’s Tier II writing requirement for the Environmental Economics and Management major is met by completing Environmental Economics and Policy 405. That course is referenced in item 3.a. below.

The completion of the Environmental Economics and Management mathematics requirement may also satisfy the College of Agriculture and Natural Resources and the University mathematics requirement.

2. The requirements of the College of Agriculture and Natural Resources for the Bachelor of Science degree.

Certain courses referenced in requirement 3.b. below may be counted toward College requirements as appropriate.

Students must achieve a grade of at least 2.0 or higher in each ABM and FIM and EEM course referenced in items 3.a. and in courses taken to fulfill requirements 3.b. and 3.c.

Agribusiness Management 435 and Food Industry Management 439 may be used to fulfill requirement 3. b. if it is not used to fulfill requirement 3. c.

Agribusiness Management 130 may be used to fulfill requirement 3. b. if it is not used to fulfill requirement 3. d.

3. The following requirements for the major:

   a. All of the following courses:

      | Course Name                                      | Credits |
      |-------------------------------------------------|---------|
      | ABM 100 Decision-making in the Agri-Food System  | 3       |
      | ABM 203 Data Analysis for the Agri-Food System   | 3       |
      | ABM 222 Agribusiness and Food Industry Sales (W)| 3       |
      | ACC 230 Survey of Accounting Concepts            | 3       |
      | EC 201 Introduction to Microeconomics            | 3       |
      | EC 202 Introduction to Macroeconomics            | 3       |
      | EEM 260 World Food, Population and Poverty       | 3       |
      | FIM 210 Professional Seminar in Food Industry    | 1       |
      | FIM 220 Food Product Marketing                   | 3       |
      | FIM 335 Food Marketing Management                | 3       |
      | FIM 410 Advanced Professional Seminar in Food    | 1       |
      | FIM 439 Food Business Analysis and Strategic     | 3       |
      | Planning (W)                                    |         |
      | FIM 460 Retail Information Systems               | 3       |
      | MGT 327 Introduction to Marketing                | 3       |
      | MTH 124 Survey of Calculus I                     | 3       |
      | SCM 304 Survey of Supply Chain Management        | 3       |

MINOR IN ENVIROMENTAL ECONOMICS

The Minor in Environmental Economics is designed to serve students who are interested in the application of economics to environmental issues. The educational objectives of the minor are to:

1. Introduce students to the concepts and principles of environmental economics.
2. Help students to develop the skills necessary to analyze environmental and natural resource issues.
3. Help students to understand the economic dimensions of the many environmental issues facing society.

The minor is available as an elective to all students who are enrolled in bachelor’s degree programs at Michigan State University. The minor is administered by the Department of Agricultural, Food, and Resource Economics.

The student must complete a minimum of 18 credits:

1. One of the following courses: 3 or 4

Requirements for the Minor in Environmental Economics

The student must complete a minimum of 18 credits:

1. One of the following courses: 3 or 4
2. All of the following courses: 12
3. One of the following courses: 3 or 4

MINOR IN FOOD INDUSTRY MANAGEMENT

The Minor in Food Industry Management is designed to serve students with majors in other fields who are interested in careers in the food industry. The primary educational objective of the minor is to provide students with a fundamental knowledge of business management in relation to the food industry. The minor is administered by the Department of Agricultural, Food, and Resource Economics.

At least 12 credits counted towards the requirements for this minor must be unique. Unique credits must not be used to fulfill another university, college, or major requirement in the student’s program.

Requirements for the Minor in Food Industry Management

The student must complete a minimum of 18 credits:

1. One of the following courses: 3 or 4
2. One of the following courses: 3 or 4
3. Two of the following courses including at least one course at the 300 or 400 level. Courses not used to satisfy requirements 1 and 2 may be used to substitute for courses listed in requirement 3.

MINOR IN AGRIBUSINESS MANAGEMENT

The Minor in Agribusiness Management is designed to serve students with majors in other fields who are interested in careers in agribusiness. The primary educational objective of the specialization is to provide students with a fundamental knowledge of business management in relation to agribusiness firms.

The minor is available as an elective to all students who are enrolled in bachelor’s degree programs at Michigan State University other than the Bachelor of Science degree program with a major in agribusiness management. The minor is administered by the Department of Agricultural, Food, and Resource Economics.

At least 12 credits counted towards the requirements for this minor must be unique. Unique credits must not be used to fulfill another university, college, or major requirement in the student’s program.

GRADUATE STUDY

The Department of Agricultural, Food, and Resource Economics offers Master of Science and Doctor of Philosophy degree programs in agricultural, food, and resource economics. The courses and programs are designed to help students become thoroughly grounded in the concepts and tools of economic analysis and management, and in using them to solve applied problems in areas such as development economics, environmental and resource economics, agricultural and food economics, and food and agribusiness management.

The department participates in several graduate level specializations.

Students who are enrolled in Master of Science degree programs in the Department of Agricultural, Food, and Resource Economics may elect a Specialization in Food Safety. For additional information, refer to the statement on the specialization in the College of Veterinary Medicine section of this catalog.

Graduate students who are enrolled in the Department of Agricultural, Food, and Resource Economics may elect a specialization in resource economics (M.S. and Ph.D.). For additional information, refer to the statement on Interdepartmental Graduate Specializations in Resource Economics.

AGRICULTURAL, FOOD and RESOURCE ECONOMICS

Admission

Many undergraduate programs provide background for graduate study in agricultural, food, and resource economics. However, a student with inadequate background in areas deemed important to the program of study may be required to complete collateral courses in addition to the minimum credit requirements for the degree and may be admitted on a provisional status until some deficiencies are remedied. All applicants for admission to graduate degree programs in agricultural, food and resource economics are required to submit scores for the General Test of the Graduate Record Examination.

Master of Science

The master's programs in agricultural, food and resource economics may be designed to serve either as final preparation for professional employment or as the foundation for a doctoral program.

In addition to meeting the requirements of the university and of the College of Agriculture and Natural Resources, students must meet the requirements specified below.

Requirements for the Master of Science Degree in Agricultural, Food and Resource Economics

The student may elect either Plan A (with thesis) or Plan B (non-thesis research paper). The student's plan of study should be approved by the department prior to the beginning of the second semester of enrollment in the program.

A total of 30 credits is required for the degree under Plan A, and a total of 33 credits is required for the degree under Plan B.

Requirements for Both Plan A and Plan B:

1. A grade-point average of at least 3.0 for all courses counting toward the master's degree, and in each course used to satisfy the mathematics, statistics, and quantitative methods requirements.
2. A minimum of 12 credits in courses in agricultural, food and resource economics, with at least 9 credits at the 800-900 level.
3. A minimum of 3 credits in courses in microeconomic theory, selected from AFRE 805, EC 812A or equivalent.
4. A minimum of 9 credits in courses in microeconomic theory, including 3 credits of mathematics for economists (equivalent to AFRE 801 or EC 811A), 3 credits of statistics (AFRE 802, EC 820A or equivalent) and one elective 3 credit quantitative methods course.

Additional Requirements for Plan A:

1. Six credits of master's thesis research.

Additional Requirements for Plan B:

1. A research paper or papers representing not fewer than 3 credits.
2. Six credits in courses in a minor field, either within or outside the department.

Doctor of Philosophy

In addition to meeting the requirements of the university and of the College of Agriculture and Natural Resources, students must meet the requirements specified below.

Requirements for the Doctor of Philosophy Degree in Agricultural, Food and Resource Economics

The student must:

1. Complete all of the following courses (20 credits): 
   - ABM 100 Decision-making in the Agri-Food System ................. 3
   - ABM 222 Agribusiness and Food Industry Sales (W) .............. 3
   - ACC 201 Principles of Financial Accounting ......................... 3
   - EC 811A Mathematical Applications in Economics ................. 2

DEPARTMENT of ANIMAL SCIENCE

Pamela Ruegg, Chairperson

UNDERGRADUATE PROGRAM

The undergraduate program in animal science is designed to prepare students for a variety of careers by providing a strong basic science foundation paired with practical animal experience gained through the multiple farm facilities near campus. Graduates may be employed in research, extension, agribusiness, finance, marketing, public relations, event or association management, and more. Graduates often attend veterinary or graduate school as well.

All animal science students must complete a set of required core courses that include anatomy and physiology, nutrition, genetics, and management. These courses are taught using beef cattle, companion animals, dairy cattle, horses, poultry, and swine. Additional courses are then added to allow students to personalize their program of study. Scientific principles of biology and animal science are key components of the program although the animal science major also provides enough flexibility for students to choose a path that meets their needs and interest areas. Students choose from one of the following concentrations as they plan their degree program: animal industry, companion and exotic animal biology, animal biology/preveterinary, or production animal scholars.

Students who are enrolled in the Bachelor of Science degree program with a major in animal science may elect a Minor in Plant, Animal and Microbial Biotechnology. For additional information, refer to the Minor in Plant, Animal and Microbial Biotechnology statement.

Requirements for the Bachelor of Science Degree in Animal Science

1. The University requirements for bachelor’s degrees as described in the Undergraduate Education section of this catalog; 120 credits, including general elective credits, are required for the Bachelor of Science degree in Animal Science.

The University’s Tier II writing requirement for the Animal Science major is met by completing all of the following courses: Animal Science 313, 314, 315. Those courses are referenced in item 3. a. below.

Students who are enrolled in the Animal Science major leading to the Bachelor of Science degree in the Department of Animal Science may complete an alternative track to Integrative Studies in Biological and Physical Sciences that consists of the following courses: Biological Science 111 and 111L, Chemistry 141, and Chemistry 143 or 251. The completion of Biological Science 111L satisfies the laboratory requirement. Biological Science 111 and 111L, Chemistry 141, and Chemistry 143 or 251 may be counted toward both the alternative track and the requirements for the major referenced in item 3. below.

The completion of the College of Agriculture and Natural Resources mathematics requirement may also satisfy the University mathematics requirement.

2. The requirements of the College of Agriculture and Natural Resources for the Bachelor of Science degree.

Certain courses referenced in requirement 3. below may be counted toward College requirements as appropriate.

3. The following requirements for the major:

a. All of the following courses: 

<table>
<thead>
<tr>
<th>Course Description</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>ANS 101 Professional Development in Animal Science I.</td>
<td>1</td>
</tr>
<tr>
<td>ANS 110 Introductory Animal Agriculture</td>
<td>4</td>
</tr>
<tr>
<td>ANS 301 Professional Development in Animal Science II.</td>
<td>3</td>
</tr>
<tr>
<td>ANS 313 Principles of Animal Feeding and Nutrition</td>
<td>4</td>
</tr>
<tr>
<td>ANS 314 Genetic Improvement of Domestic Animals</td>
<td>3</td>
</tr>
<tr>
<td>ANS 315 Anatomy and Physiology of Farm Animals</td>
<td>4</td>
</tr>
<tr>
<td>ANS 401 Issues in Animal Agriculture</td>
<td>1</td>
</tr>
<tr>
<td>BS 111 Cells and Molecules</td>
<td>3</td>
</tr>
<tr>
<td>BS 111L Cell and Molecular Biology Laboratory</td>
<td>2</td>
</tr>
<tr>
<td>CEM 141 General Chemistry</td>
<td>4</td>
</tr>
</tbody>
</table>

b. One of the following courses: 3 or 4

<table>
<thead>
<tr>
<th>Course Description</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>STT 200 Statistical Methods</td>
<td>3</td>

</tr>
<tr>
<td>ANS 442 Advanced Horse Management</td>
<td>3</td>
</tr>
<tr>
<td>ANS 472 Advanced Swine Management</td>
<td>3</td>
</tr>
<tr>
<td>ANS 482 Advanced Companion Animal Management</td>
<td>3</td>
</tr>
</tbody>
</table>

6. Three of the following courses (6 to 12 credits): 

<table>
<thead>
<tr>
<th>Course Description</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>ANS 305 Applied Animal Behavior</td>
<td>3</td>
</tr>
<tr>
<td>ANS 309 Health and Hygiene of Livestock</td>
<td>3</td>
</tr>
<tr>
<td>ANS 404 Advanced Animal Genetics</td>
<td>2</td>
</tr>
<tr>
<td>ANS 405 Endocrinology of Reproduction</td>
<td>4</td>
</tr>
<tr>
<td>ANS 407 Food and Animal Toxicology</td>
<td>3</td>
</tr>
<tr>
<td>ANS 413 Monogastric Animal Nutrition</td>
<td>3</td>
</tr>
<tr>
<td>ANS 414 Advanced Animal Breeding</td>
<td>2</td>
</tr>
<tr>
<td>ANS 415 Growth and Musculoskeletal Biology</td>
<td>3</td>
</tr>
<tr>
<td>ANS 416 Meat Science and Muscle Biology</td>
<td>2</td>
</tr>
<tr>
<td>ANS 418 Comprehensive Nutrition Management Planning</td>
<td>3</td>

<td>BMB 401 Basic Biochemistry</td>
<td>4</td>
</tr>
<tr>
<td>BS 110 Organisms and Populations</td>
<td>4</td>
</tr>
<tr>
<td>CEM 161 Chemistry Laboratory I</td>
<td>1</td>
</tr>
</tbody>
</table>
3. Two of the following courses (6 credits):
ANS 262 Introductory Sheep Management ............. 3
ANS 272 Introductory Swine Management .......... 3

4. One of the following courses (3 to 4 credits):
ANS 305 Applied Animal Behavior .................. 3
ANS 306 Endocrinology of Reproduction .......... 3
ANS 415 Growth and Musculoskeletal Biology ....... 3
ANS 425 Principles of Animal Biotechnology ....... 3
ANS 435 Mammary Physiology ....................... 4

5. One of the following courses (3 credits):
ANS 422 Advanced Beef Cattle Management ....... 3
ANS 432 Advanced Dairy Cattle Management ...... 3
ANS 472 Advanced Swine Management .......... 3

6. One of the following courses (2 to 4 credits):
ANS 404 Advanced Animal Genetics ................ 2
ANS 407 Food and Animal Toxicology ............. 3
ANS 414 Advanced Animal Breeding ............... 2
ANS 416 Meat Science and Muscle Biology ....... 2
ANS 418 Comprehensive Nutrient Management .... 3

7. The following course (2 credits):
ANS 390 Animal Science Practicum ............... 2

GRADUATE STUDY

The graduate program in animal science is designed to provide students with opportunities to pursue a program that focuses on the basic biomedical and agricultural sciences or on applied management aspects of animal science.

The Department of Animal Science offers Master of Science and Doctoral of Philosophy degree programs in animal science and a Doctor of Philosophy degree program in animal science-environmental toxicology.

Students who are enrolled in Master of Science degree programs in the Department of Animal Science may elect a Specialization in Environmental Toxicology. For additional information, refer to the statement on the specialization in the College of Agriculture and Natural Resources section of this catalog.

Students who are enrolled in Master of Science degree programs in the Department of Animal Science may elect a Specialization in Food Safety. For additional information, refer to the statement on the specialization in the College of Veterinary Medicine section of this catalog.

ANIMAL SCIENCE

Programs of study are based on the strengths of the department and the goals of individual students. Although individual students' programs vary, all graduate programs in animal science are designed to:
1. Provide a strong foundation in biological science and an in-depth knowledge of a specific biological discipline of importance to animal agriculture.
2. Develop creative potential and foster independent thought.
3. Improve technical skills.
4. Provide the foundation for effective, independent careers in extension, research, teaching, or agribusiness.

The department offers five areas of specialization within the field of animal science: quantitative genetics, systems science, nutrition, physiology of growth, lactation and reproduction, microbiology, molecular biology, toxicology, and livestock and farm management. Research for theses or dissertations may focus on beef or dairy cattle, sheep, swine, horses, poultry, or fur- and fur-bearing and laboratory species. Modern animal computer, and library facilities support research.
Students who are enrolled in the Master of Science degree program in the Department of Animal Science may elect a Specialization in Environmental Toxicology. For additional information, refer to the Graduate Specialization in Environmental Toxicology statement.

In addition to meeting the requirements of the university and of College of Agriculture and Natural Resources, the student must meet the requirements specified below.

Admission
To be admitted to the master’s or doctoral degree program in animal science, students must have a bachelor's degree in animal science or in a related biological science. To enroll in advanced courses in animal science and supporting sciences, students should have completed courses that establish principles in animal science and in basic physical and biological sciences pertinent to the area of specialization within the field of animal science that the student chooses. In some cases, students may need to complete collateral courses in addition to the courses that are required for the graduate degree.

Requirements for the Master of Science Degree in Animal Science
The student may elect either Plan A (with thesis) or Plan B (without thesis). A total of 30 credits is required for the degree under either Plan A or Plan B. In cooperation with the student's major professor, the student plans a program of study that includes courses related to one of the areas of specialization within the field of animal science referenced above, seminars, and teaching experience. The student's major professor and guidance committee must approve the student's program of study, including thesis research for students under Plan A.

Requirements for the Doctor of Philosophy Degree in Animal Science
In cooperation with the student's major professor, the student plans a program of study that includes courses related to one of the areas of specialization within the field of animal science referenced above, seminars, and teaching experience. The student's major professor and guidance committee must approve the student's program of study, including dissertation research.

ANIMAL SCIENCE—ENVIRONMENTAL TOXICOLOGY

Doctor of Philosophy
For information about the Doctor of Philosophy degree program in animal science—environmental toxicology, refer to the statement on Doctoral Program in Environmental and Integrative Toxicological Sciences in the Graduate Education section of this catalog.
Requirements for the Minor in Technology Systems Management

Students must complete a minimum of 15 credits from the following:

1. Four of the following courses (12 credits):
   - TSM 130 Energy Efficiency and Conservation in Agricultural Systems...
   - TSM 222 Fundamentals of Automation and Controls...........................
   - TSM 226 Renewable Energy Systems Management..............................
   - TSM 251 Information Technology in Agricultural Systems..................
   - TSM 331 Water Management in Agriculture and Food Systems............... 3
   - TSM 343 Principles of Precision Agriculture.................................... 3

2. One of the following courses (3 or 4 credits):
   - ABM 222 Agribusiness and Food Industry Sales (W).........................
   - ANS 418 Comprehensive Nutrient Management Planning.................... 3
   - CSS 354 Water Resources Management ........................................... 3
   - FSC 325 Food Processing: Unit Operations...................................... 3
   - FW 419 Applications of Geographic Information to Natural Resources Management.............................................
   - GEO 221 Introduction to Geographic Information................................
   - TSM 493 Professional Internship in Technology Systems.................... 3
   - TSM 226 Renewable Energy Systems Management..............................

LINKED BACHELOR’S-MASTER’S DEGREE IN BIOSYSTEMS ENGINEERING

Bachelor of Science Degree in Biosystems Engineering

Master of Science Degree in Biosystems Engineering

The department welcomes applications from Michigan State University Biosystems Engineering undergraduate students in their junior and senior years. Admission applications must be made during the prior spring semester for an anticipated spring graduation or the prior fall semester for an anticipated fall graduation to allow admission before the final semester as a Biosystems Engineering undergraduate. Admission to the program requires a minimum undergraduate grade-point average of 3.5 and an approved program of study for the Master of Science degree in Biosystems Engineering at the time of admission. Admission to the Linked Bachelor’s-Master’s program allows the application of up to 9 credits toward the master’s program for qualifying 400-level and above course work taken at the undergraduate level at Michigan State University or another postsecondary accredited institution of comparable academic quality. The number of approved credits, not to exceed 9, are applied toward the credit requirement of the master’s degree. Credits applied to the Linked Bachelor’s-Master’s program are not eligible to be applied to any other graduate degree program.

GRADUATE STUDY

The Department of Biosystems and Agricultural Engineering offers the programs listed below:

   Master of Science

   biosystems engineering

   Doctor of Philosophy

   biosystems engineering

Study for the department’s master’s and doctoral degree programs is administered by the College of Agriculture and Natural Resources.

   Students who are enrolled in Master of Science degree programs in the Department of Biosystems and Agricultural Engineering may elect a Specialization in Food Safety. For additional information, refer to the statement on the specialization in the College of Veterinary Medicine section of this catalog.

BIOSYSTEMS ENGINEERING

Biosystems engineers apply the basic sciences, mathematics, engineering sciences, and technology to design sustainable solutions to problems with a critical biological component. Biosystems engineers work to ensure an adequate and safe food supply while efficiently utilizing natural resources and protecting the environment. Specific application areas include food and biomass production systems, food processing systems, processing systems for utilization and conversion of biological products, water and waste management systems, natural resource and environmental protection, and a range of other biological challenges that require engineering expertise.

The department offers both Master of Science and Doctor of Philosophy degree programs with majors in biosystems engineering.

Master of Science

The Master of Science degree program in biosystems engineering is designed to prepare graduates for advanced career opportunities that require disciplinary expertise beyond that available in the Bachelor of Science degree. The program is available under Plan A (thesis) and Plan B (without thesis). Plan A introduces the student to research methods, and the student is expected to execute, analyze, and publish an original research project under the guidance of an advisor. Plan B is suited for those who do not plan a research-related career, but desire additional skills and knowledge obtained through advanced course work.

In addition to meeting the requirements of the university and of the College of Agriculture and Natural Resources, students must meet the requirements specified below.

Admission

To be considered for admission to the Master of Science degree program in biosystems engineering, an applicant must take the Graduate Record Examination General Test and have the scores sent to the department.

Regular Status. Admission to the master’s degree program in biosystems engineering with regular status may be granted by the department, subject to the availability of resources and to the approval of the dean, upon consideration of the likelihood that the applicant will be able to complete a master’s degree program successfully. To be admitted to the master’s program in biosystems engineering, an applicant must have:

1. A grade-point average not lower than 3.00 for the final two years of the undergraduate program, or standing in the upper quarter of the graduating class in the student’s major.

2. A bachelor’s degree, either:
   a. from an accredited program in engineering, or
   b. from a related science-oriented program in which the applicant has shown very high academic achievement, as certified by the department.

An applicant without an engineering degree must demonstrate the abilities and experience necessary to succeed in the core courses, Biosystems Engineering 815, 825, and 835. The student must complete, previously, or within the master’s program, a significant engineering design experience.

Provisional Status. Admission to the master’s degree program in biosystems engineering with provisional status may be granted by the department, subject to the approval of the dean: 1. To an applicant qualified for regular admission except that collateral courses are deemed necessary, or 2. To an applicant whose record is incomplete.

If collateral courses are required, the minimum acceptable grades and the semesters by which those courses must be com-
AGRICULTURE AND NATURAL RESOURCES
Department of Biosystems and Agricultural Engineering

The student must complete:
Requirements for Both Plan A and Plan B:

1. Complete the following course:
   - BE 835 Modeling Methods in Biosystems Engineering ........................ 3

Additional Requirements for Plan A:

2. All of the following courses:
   - BE 890 Master’s Thesis Research .................................................. 6

   Not more than 8 credits of Biosystems Engineering 890 may be counted toward the requirements for the degree under Plan A.

3. Provide to the major professor and to the department a hard–bound copy of the thesis made from the original unbound manuscript submitted to the Office of The Graduate School. Arrangement for delivery of the copies shall be made when the original manuscript is submitted to the Office of The Graduate School.

Additional Requirements for Plan B:

1. Complete the following course:
   - BE 899 Master’s Thesis Research .................................................. 6

   Not more than 8 credits of Biosystems Engineering 890 may be counted toward the requirements for the degree under Plan B.

2. All of the following courses:
   - BE 820 Research Methods in Biosystems Engineering ................. 1
   - BE 835 Modeling Methods in Biosystems Engineering .............. 3
   - BE 852 Biosystems Engineering Seminar .................................. 3

   Additional Requirements for Plan A:

   The student must:

1. Complete the following course:
   - BE 899 Master’s Thesis Research .................................................. 6

2. Pass a final oral examination over the written thesis administered by the department and conducted by three regular university faculty members, at least two of which must be Biosystems Engineering faculty.

3. Provide to the major professor and to the department a hard–bound copy of the thesis made from the original unbound manuscript submitted to the Office of The Graduate School. Arrangement for

Academic Standards

1. Grades. The student must earn a grade of 2.0 or higher in each course in the approved program of study. The student must repeat any course in the approved program for which the grade earned was below 2.0.

2. Cumulative Grade–Point Average. The student must maintain a cumulative grade–point average of at least 3.00 in the courses in the approved program of study.

3. Probation Status. A student is placed in probation status if the student's cumulative grade–point average for the courses in the approved program of study is below 3.00. A student in probation status is not allowed to carry more than 7 credits per semester or to enroll in any course the primary focus of which is independent study.

4. Retention In and Dismissal From the Program.

   a. Cumulative Grade–Point Average. Should a student's cumulative grade–point average fall below 3.00 after having completed 16 or more credits in courses in the approved program of study, the student may be enrolled in probation status in the master's degree program for one additional semester. If at the end of the additional semester the student's cumulative grade–point average is 3.00 or higher, the student may continue to enroll in the master's degree program. If at the end of the additional semester the student's cumulative grade–point average is still below 3.00, the student will be dismissed from the program.

   b. Academic Progress and Professional Potential. Each student's academic progress and professional potential are evaluated by March 15 of each year. A student who in the judgment of the faculty is making satisfactory academic progress and has professional potential may continue to enroll in the master's degree program. A student who in the judgment of the faculty is not making satisfactory academic progress or lacks professional potential will be dismissed from the program.

Transfer Credits

As a member of the Michigan Coalition for Engineering Education (MCEE), Michigan State University will accept up to one less than half of the course credits required for the Master of Science degree program in Biosystems Engineering in transfer from other MCEE member institutions provided that (1) the student earned a grade of at least 3.0, or the equivalent, in the related courses; (2) the credits were not earned in research or thesis courses; and (3) the related courses are acceptable to the department.

For information about transfer credits from institutions that are not members of the MCEE, refer to the statement on MASTER'S PROGRAMS, Transfer Credits, in the Graduate Education section of this catalog.

Doctor of Philosophy

The Doctor of Philosophy degree in Biosystems Engineering is designed to prepare graduates for advanced careers that require demonstrated research skills and comprehensive knowledge of the discipline. The program is suitable only for those students
who have shown outstanding ability and potential in the field, either by high quality work in a Master of Science degree or by exceptional achievement in a Bachelor of Science degree and additional technical and professional accomplishments. During teaching and training experiences, the student is expected to demonstrate in-depth and comprehensive knowledge of the discipline and skills essential to the dissemination of that knowledge. Additionally, the student must be able to plan, conduct, manage, and publish independent, original research via the dissertation and peer-reviewed manuscripts. In addition to meeting the requirements of the university and of the College of Agriculture and Natural Resources, students must meet the requirements specified below.

Admission
To be considered for admission to the Doctor of Philosophy degree program in biosystems engineering, an applicant must take the Graduate Record Examination General Test and have the scores sent to the department.

Regular Status. Admission to the doctoral degree program in biosystems engineering with regular status may be granted by the department, subject to the availability of resources and to the approval of the dean.

To be admitted to the doctoral program in biosystems engineering, an applicant should have a master's degree and must:
1. Have either a Bachelor of Science degree in engineering or a master's degree in engineering.
2. Demonstrate evidence of ability and resolution to complete a doctoral program, as attested by the department upon review of the applicant's academic record, test scores, experience, reference statements, professional qualifications, proposed studies, and other relevant information.

Admission to the doctoral program without a master's degree, or the equivalent thereof, requires special approval by the department and the dean.

Provisional Status. Admission to the doctoral degree program in biosystems engineering with provisional status may be granted by the department, subject to the approval of the dean:
1. To an applicant qualified for regular admission except that collateral courses are deemed necessary, or
2. To an applicant whose record is incomplete.

A student who is admitted to the Doctor of Philosophy degree program without a Master of Science degree in engineering may be required to complete collateral courses, in addition to the courses that are required for the doctoral degree. If collateral courses are required, they will be specified on the admission form. Biosystems Engineering 490 and 890 may not be used to satisfy collateral course requirements.

The provisional status will be changed to regular status when the conditions specified on the admission form have been met, as determined by the department and approved by the dean.

Guidance Committee
The student's guidance committee consists of at least four regular faculty members and is appointed by the department chairperson in consultation with the student and the appropriate faculty members, and with the approval of the dean. At least two members of the guidance committee shall be from the Department of Biosystems and Agricultural Engineering and at least one member shall be from a different department preferably in the College of Agriculture and Natural Resources or the College of Engineering. The chairperson of the guidance committee will be appointed by the department chairperson after consultation with the student and the person recommended to chair the committee.

Guidance Committee Report
The student's program of study shall be submitted for approval to the Department of Biosystems and Agricultural Engineering and to the dean by no later than the end of the student's second semester of enrollment in the doctoral program. The subject matter and instructor must be specified for every independent study, special problems, or selected topics course that is included in the student's approved program of study.

The student's program of study must be approved in order for the student to continue to enroll in the doctoral degree program beyond the second semester.

Modification of Program
The following changes are not permitted in a student's approved program of study:
1. Adding or deleting a course for which a grade has already been assigned under any of the three grading systems (numerical, Pass–No Grade, or Credit–No Credit).
2. Adding or deleting a course for which grading was postponed by the use of the DF–Deferred marker.
3. Adding or deleting a course which the student dropped after the middle of the semester and for which "W" or "N" or "0.0" was designated.
4. Adding or deleting a course during the final semester of enrollment in the doctoral degree program.

Requirements for the Doctor of Philosophy Degree in Biosystems Engineering
The student must:

1. Complete a minimum of 24 credits in Biosystems Engineering 999.
2. Complete a minimum of 38 additional credits (excluding Biosystems Engineering 899) beyond the bachelor's degree, in courses at the 400–, 800–, and 900–level including:
   a. All of the following courses:
      BE 815 Experimentation and Instrumentation in Biosystems Engineering ......................... 3
      BE 820 Research Methods in Biosystems Engineering ......... 1
      BE 835 Modeling Methods in Biosystems Engineering ...... 3
      BE 892 Biosystems Engineering Seminar ................. 1
   b. Additional course work approved by the student's guidance committee, based on the student's prior academic background in relation to the selected area of study and research.
3. Pass the doctoral comprehensive examination within five years of the date of first enrollment and at least six months prior to the final oral examination in defense of the dissertation. The examination may be re-taken once. It is the student's responsibility to obtain detailed information about this examination from the department.
4. Pass the examination in defense of the dissertation. The examination may be re-taken once.
5. Provide to the major professor and to the department a hard–bound copy of the dissertation made from the original unbound manuscript submitted to the Office of The Graduate School. Arrangements for delivery of the copies shall be made when the original manuscript is submitted to the Office of The Graduate School.

Academic Standards
1. Grades. The student must earn a grade of 2.0 or higher in each course in the approved guidance committee report, including collateral courses and courses accepted in transfer. The student must repeat any course on the approved program for which the grade earned was below 2.0.
2. Cumulative Grade–Point Average. The student must maintain a cumulative grade–point average of at least 3.00 in courses in the approved guidance committee report, with the exception of collateral courses and courses accepted in transfer.
3. Deferred Grades. A student may accumulate no more than three deferred grades (identified by the DF–Deferred marker) in courses other than independent study.
4. **Probational Status.** A student is placed on probational status if either or both of the following conditions apply:
   a. The student's cumulative grade–point average for the courses in the approved guidance committee report is below 3.00.
   b. The student has accumulated more than three deferred grades (identified by the DF–Deferred marker) in courses other than those courses the primary focus of which is independent study.

   A student in probational status is not allowed to carry more than 7 credits per semester or to enroll in any course the primary focus of which is independent study.

5. **Retention In and Dismissal From the Program.**
   a. **Cumulative Grade–point Average.** Should a student's cumulative grade–point average fall below 3.00 after having completed half of the courses in the approved guidance committee report, the student may be enrolled in probational status in the doctoral degree program for one additional semester. If at the end of the additional semester the student's cumulative grade–point average is 3.00 or higher, the student may continue to enroll in the doctoral degree program. If at the end of the additional semester the student's cumulative grade–point average is still below 3.00, the student will be dismissed from the program.
   b. **Deferred Grades.** Should a student accumulate more than three deferred grades (identified by the DF–Deferred marker) in courses other than independent study, the student may be enrolled in probational status in the doctoral degree program for one additional semester. If at the end of the additional semester the student has no more than three deferred grades, the student may continue to enroll in the doctoral degree program. If at the end of the additional semester the student still has more than three deferred grades, the student will be dismissed from the program.
   c. **Academic Progress and Professional Potential.** Each student's academic progress and professional potential are evaluated spring semester of each year. A student who in the judgment of the faculty is making satisfactory academic progress and has professional potential may continue to enroll in the doctoral degree program. A student who in the judgment of the faculty is not making satisfactory academic progress or lacks professional potential will be dismissed from the program.

**UNDERGRADUATE PROGRAMS**

**AGRICULTURE, FOOD AND NATURAL RESOURCES EDUCATION**

The Bachelor of Science Degree in Agriculture, Food and Natural Resources Education is designed to prepare students for careers as school-based agriculture, food and natural resources teachers at the secondary-level, careers in agricultural and natural resource education fields, or for professional or graduate studies.

**Requirements for the Bachelor of Science Degree in Agriculture, Food and Natural Resources Education**

1. The University requirements for bachelor's degrees as described in the Undergraduate Education section of this catalog; 120 credits, including general elective credits, are required for the Bachelor of Science degree in Agriculture, Food and Natural Resources Education.

   The University's Tier II writing requirement for the Agriculture, Food and Natural Resources major is met by completing CSUS 200, 300, 301, and 343. Those courses are referenced in item 3. below.

   Students who are enrolled in the Agriculture, Food, and Natural Resources Education major leading to the Bachelor of Science degree in the Department of Community Sustainability may complete an alternative track to Integrative Studies in Biological and Physical Sciences that consists of the following courses: Biological Science 162 and 172, and Chemistry 141. The completion of Biological Science 172 satisfies the laboratory requirement. Biological Science 162 and 172, and Chemistry 141 may be counted toward both the alternative track and the requirements for the major referenced in item 3. below.

   The completion of the College of Agriculture and Natural Resources mathematics requirements may also satisfy the University mathematics requirement.

2. The requirements of the College of Agriculture and Natural Resources for the Bachelor of Science degree. Certain courses referenced in item 3. below may be counted toward College requirements as appropriate.

3. The following requirements for the major:

   a. All of the following courses (56 credits):
      
      - ANS 110 Introductory Animal Agriculture ........................................... 4
      - BS 161 Cell and Molecular Biology ...................................................... 3
      - BS 162 Organismal and Population Biology ........................................... 3
      - BS 172 Organismal and Population Biology Laboratory ........................ 2
      - CSS 101 Introduction to Crop Science .................................................. 3
      - CSS 210 Fundamentals of Soil Science ................................................. 3
      - CEM 141 General Chemistry .................................................................... 4
      - CSUS 200 Introduction to Sustainability .................................................. 3
      - CSUS 222A Seminar in Instructional Theory I – Agriculture, Food and Natural Resources Education .......................... 1
      - CSUS 222B Seminar in Instructional Theory II – Agriculture, Food and Natural Resources Education .......................... 1
      - CSUS 222C Seminar in Instructional Theory III – Agriculture, Food and Natural Resources Education .......................... 1
      - CSUS 223A Seminar in Leadership Theory I – Agriculture, Food and Natural Resources Education .......................... 1
      - CSUS 223B Seminar in Leadership Theory II – Agriculture, Food and Natural Resources Education .......................... 1
      - CSUS 223C Seminar in Leadership Theory III – Agriculture, Food and Natural Resources Education .......................... 1
      - CSUS 300 Theoretical Foundations of Sustainability .................................. 3
      - CSUS 301 Community Engagement for Sustainability .............................. 3
      - CSUS 343 Community Food and Agriculture Systems ............................. 1
      - FOR 202 Introduction to Forestry ............................................................ 3
      - HRT 203 Principles of Horticulture .......................................................... 3
      - IIBIO 355 Ecology .................................................................................... 3
      - IIBIO 355L Ecology Laboratory (W) ........................................................ 1
      - TE 150 Reflections on Learning ................................................................ 3
      - TE 250 Human Diversity, Power, and Opportunity in Social Institutions .... 3

   b. One of the following courses (3 credits):

      - Michael W. Hamm, Acting Chairperson

      The Department of Community Sustainability is an interdisciplinary department that offers programs leading to the Bachelor of Science, Master of Science, and Doctor of Philosophy degrees.

      The department's faculty reflects a unique integration of the social sciences, humanities and natural sciences across its research, teaching and outreach missions. This integration advances the department's goal of educating scholars and practitioners who are able to create, integrate and harness new knowledge to protect and improve both social and natural systems. Students can focus their interests in community sustainability around majors and courses that address natural resources and the environment, food systems, recreation and tourism, education and leadership.

      The department's programs reflect an understanding that how students learn is as important as what they learn. Courses, service-learning projects, internships, study abroad programs and other co-curricular activities combine academic content with the building of competencies such as fostering dialogue and action on critical issues, decision-making, leveraging diversity in communities and organizations, encouraging innovation within organizations and/or communities, and promoting and sustaining positive change.
ABM 100 Decision-making in the Agri-Food System .......... 3
ABM 130 Farm Management I .................................. 3
c. One of the following courses (3 credits):
   CSUS 464 Environmental and Natural Resource Policy
   in Michigan ................................................. 3
d. All of the following courses for students admitted into the second-
   ary teacher education program (15 credits):
   TE 302 Learners and Learning in Contexts –
   Secondary (W) .................................... 4
e. A secondary disciplinary teaching minor chosen from a list of ap-
   proved secondary education minors for teacher certification.
   Refer to the Teacher Certification section of the Department of
   Teacher Education.
f. All of the following courses for students not pursuing secondary
   teacher education certification (15 credits):
   CSUS 330 Organizational Management for Community
   Sustainability ........................................ 3
e. One of the following courses: ............................ 3
   or
   CSUS 433 Grant Writing and Fund Development. ......... 3
g. CSUS 493 Professional Internship in Community
   Sustainability ............................... 3
   An additional 9 credits of electives approved by the student’s aca-
   demic advisor.

ENVIRONMENTAL STUDIES AND SUSTAINABILITY

The Department of Community Sustainability offers a Bachelor of
Science degree program with a major in Environmental Studies and
Sustainability. This program of study is concerned with who
uses natural resources, how they use them, and how positive out-
comes of use can be enhanced and negative impacts can be miti-
gated. It examines resource use and allocation through the
lens of community engagement, sustainability and environ-
mental justice. Students benefit from a broad range of interdisci-
plinary courses, as well as disciplinary and methods courses
carefully selected to enhance students’ technical knowledge.
Professional internships, a legacy project and study abroad experi-
ences, the program provides an opportunity for students to obtain
broad, interdisciplinary education which emphasizes a profes-
sional area of knowledge integrated with the tenets of sus-
tainability. The Sustainable Parks, Recreation and Tourism
major is designed to prepare students for professional positions
related to the management and enjoyment of the outdoors. Such
positions include management of public parks, forests and pro-
ected areas, non-profit lands and facilities such as camps and
commercial enterprises that provide goods and services to out-
door enthusiasts. Meeting people’s outdoor leisure needs, en-
hancing the quality of life, and providing sustainable economic
and social development are hallmarks of the Sustainable Parks,
Recreation and Tourism major.

Requirements for the Bachelor of Science Degree in
Environmental Studies and Sustainability

1. The University requirements for bachelor’s degrees as described in the Undergradu-
ate Education section of this catalog: 120 credits, including general elective credits, are
required for the Bachelor of Science degree in Environmental Studies and
Sustainability.

   The University’s Tier II writing requirement for the Environmental Studies and
   Sustainability major is met by completing Community Sustainability 330, or 433. Those
   courses are referenced in item 3. d. below.

   Students who are enrolled in the Environmental Studies and Sustainability major
   leading to the Bachelor of Science degree in the Department of Community
   Sustainability may complete an alternative track to Integrative Studies in Biological and
   Physical Sciences that consists of the following courses: Biological Science 162 and
   172, and Chemistry 141. The completion of Biological Science 172 satisfies the labora-
   tory requirement. Biological Science 162 and 172, and Chemistry 141 may be counted
   toward both the alternative track and the requirements for the major referenced in item
   3. below.

   The completion of the College of Agriculture and Natural Resources mathematics re-
   quirement may also satisfy the University mathematics requirement.

2. The requirements for the College of Agriculture and Natural Resources for the Bache-
lor of Science degree.

   Certain courses referenced in requirement 3. below may be counted toward College
   requirements as appropriate.

3. The following requirements for the major (64 to 67 credits):

   a. All of the following courses: ........................................ 31
      BS 161 Cell and Molecular Biology .................. 3
      BS 162 Organismal and Population Biology .......... 3
      BS 172 Organismal and Population Biology Laboratory .... 2
      CEM 141 General Chemistry ....................... 4
      CSUS 200 Introduction to Sustainability ............ 3

   b. Two of the following courses: ............................ 6
      CSUS 215 International Development and Sustainability . 3
      CSUS 259 Sustainable Energy and Society ........ 3
      CSUS 265 Exploring Environmental and Sustainability
      Issues and Policy with Film .......................... 3
      CSUS 273 Introduction to Travel and Tourism ....... 3
      CSUS 276 Sustaining our National Parks and Recreat-
      ion Lands .............................................. 3
      a. One of the following courses: ................... 3 or 4
         CSS 210 Fundamentals of Soil Science ............ 3
         GEO 206 Physical Geography .................... 3
         GLG 201 The Dynamic Earth .............. 4
      d. One of the following courses: ................... 3
         CSUS 330 Organizational Management for Community
         Sustainability (W) .................................. 3
         CSUS 433 Grant Writing and Fund Development (W) .... 3
         CSUS 464 Environmental and Natural Resource Policy
         in Michigan ........................................ 3
         CSUS 465 Environmental and Natural Resource Law .... 3
         FOR 466 Natural Resource Policy ................ 3
         IBIO 446 Environmental Issues and Public Policy .... 3
      f. Three of the following courses: ........................ 9 or 10
         CSUS 320 Environmental Planning and Management . 3
         CSUS 354 Water Resources Management .......... 3
         CSUS 425 Environmental Impact Assessment ....... 3
         CSUS 429 Program Evaluation for Community
         Sustainability ...................................... 3
         CSUS 453 Watershed Planning and Management .... 3
         FW 419 Applications of Geographic Information Sys-
         tems to Natural Resources Management .......... 4
         GEO 221 Introduction to Geographic Information .... 3
         GEO 325 Geographic Information Systems ....... 3
      g. One of the following courses: ................... 3 or 4
         CSUS 322 Leadership for Community Sustainability . 3
         CSUS 330 Organizational Management for Community
         Sustainability (W) .................................. 3
         CSUS 473 Social Entrepreneurship for Community
         Sustainability ...................................... 3
      h. One of the following courses: ................... 3
         CSUS 343 Community Food and Agricultural Systems .. 3
         CSUS 431 Interpretation and Visitor Information Systems ... 3
         CSUS 445 Community-Based Environmental and
         Sustainability Education ........................... 3
         CSUS 447 Community Economic Development .......... 3
      i. A minimum of 3 credits in one of the following courses:
         CSUS 418 Community Sustainability Study Abroad .... 3 to 6
         CSUS 419 International Studies in Community
         Sustainability ...................................... 3 to 12
         CSUS 493 Professional Internship in Community
         Sustainability ...................................... 3 to 6
   Students may substitute another appropriate course with ap-
   proval of the department.

SUSTAINABLE PARKS, RECREATION and TOURISM

The Department of Community Sustainability offers a Bachelor of
Science degree in Sustainable Parks, Recreation and Tourism. By
combining a body of specialized professional knowledge with
the study of natural, social, management and behavioral sci-
ences, the program provides an opportunity for students to obtain
a broad, interdisciplinary education which emphasizes a profes-
sional area of knowledge integrated with the tenets of sus-
tainability. The Sustainable Parks, Recreation and Tourism
major is designed to prepare students for professional positions
related to the management and enjoyment of the outdoors. Such
positions include management of public parks, forests and pro-
ected areas, non-profit lands and facilities such as camps and
commercial enterprises that provide goods and services to out-
door enthusiasts. Meeting people’s outdoor leisure needs, en-
hancing the quality of life, and providing sustainable economic
and social development are hallmarks of the Sustainable Parks,
Recreation and Tourism major.

Students in the Sustainable Parks, Recreation and Tourism
major will acquire an understanding of natural resource recrea-
tion and tourism that integrates sustainability and effectively
Requirements for the Bachelor of Science Degree in Sustainable Parks, Recreation and Tourism

1. The University requirements for bachelor's degrees as described in the Undergraduate Education section of this catalog; 120 credits, including general elective credits, are required for the Bachelor of Science degree in Sustainable Parks, Recreation and Tourism.

The University’s Tier II writing requirement for the Sustainable Parks, Recreation and Tourism major is met by completing Community Sustainability 325, 330 or 433. That course is referenced in item 3. below.

The completion of the College of Agriculture and Natural Resources mathematics requirement may also satisfy the University mathematics requirement.

2. The requirements of the College of Agriculture and Natural Resources for the Bachelor of Science degree.

Certain courses referenced in requirement 3. below may be counted toward College requirements as appropriate.

3. The following requirements for the major:

a. All of the following courses: ................................... CREDITS
   CSUS 200 Introduction to Sustainability .......................... 3
   CSUS 300 Theoretical Foundations of Sustainability ............ 3
   CSUS 301 Citizen Engagement for Sustainability ............... 3
   CSUS 493 Professional Internship .................................. 3 to 6
   
   b. One of the following courses: ................................... 3
   CSUS 325 Study and Practice of Communication for Sustainability (W) .................................................. 3
   CSUS 330 Organizational Management for Community Sustainability (W) ............................................. 3
   CSUS 433 Grant Writing and Fund Development (W) .......... 3
   Community Sustainability 330 may not be used to fulfill both b. and c.

   c. Five of the following courses: .................................... 15 to 16
   CSUS 273 Introduction to Travel and Tourism .................. 3
   CSUS 276 Sustaining Our National Parks and Recreation Lands .......................... 3
   CSUS 330 Organizational Management for Community Sustainability (W) ............................................. 3
   CSUS 473 Social Entrepreneurship for Community Sustainability .................................................. 3
   CSUS 474 Advanced Topics in Tourism Management .......... 3
   Community Sustainability 330 may not be used to fulfill both b. and c.

   d. One of the following courses: ................................... 3 or 4
   FW 419 Applications of Geographic Information Systems to Natural Resources ........................................... 4
   GEO 221 Introduction to Geographic Information .............. 3

   e. Five of the following courses: .................................... 14 or 15
   ACC 230 Survey of Accounting Concepts ......................... 4
   CSS 210 Fundamentals of Soil Science ............................ 3
   CSUS 310 History of Environmental Thought and Sustainability .................................................. 3
   CSUS 354 Water Resources Management .......................... 3

   HB 267 Management of Food and Beverage Systems ......... 3
   MKT 327 Introduction to Marketing ................................. 3

Requirements for the Minor in Sustainable Natural Resource Recreation Management

1. Both of the following courses (7 credits):
   CSUS 276 Sustaining Our National Parks and Recreation Lands . . 3
   CSUS 476 Natural Resource Recreation Management ............. 4

2. One of the following courses outside the student’s course requirements for the major (3 or 4 credits):
   ANS 110 Introductory Animal Agriculture .......................... 4
   CSS 101 Introduction to Crop Science ............................. 3
   CSUS 200 Introduction to Sustainability .......................... 3
   CSUS 273 Introduction to Travel and Tourism .................... 3
   FOR 202 Introduction to Forestry .................................... 3
   FW 101 Fundamentals of Fisheries and Wildlife Ecology ......... 3

3. Two of the following courses, one of which is outside the student’s course requirements for the major (3 to 7 credits):
   CSS 210 Fundamentals of Soil Science ............................. 3
   CSUS 278 Introduction to Conservation, Recreation and Environmental Enforcement .......................... 3
   CSUS 354 Water Resources Management .......................... 3
   CSUS 431 Interpretation and Visitor Information Systems .... 3
   CSUS 464 Environmental and Natural Resource Policy in Michigan 3
   CSUS 465 Environmental and Natural Resource Law .......... 3
   CSUS 473 Social Entrepreneurship and Community Sustainability .................................................. 3
   CSUS 474 Advanced Topics in Tourism Management .......... 3
   FOR 404 Forest Ecology .............................................. 3
   FOR 412 Wildland Fire ................................................ 2
   FOR 466 Natural Resource Policy .................................... 2
   FW 419 Applications of Geographic Information Systems to Natural Resources Management .................... 4
   GEO 221 Introduction to Geographic Information .................. 3
   IBO 355 Ecology ....................................................... 3

TEACHER CERTIFICATION OPTIONS

The agriculture, food and natural resources education disciplinary major leading to the Bachelor of Science degree is available for teacher certification. Students who complete the requirements for the agriculture, food and natural resources education major, the requirements for teacher certification, and a minimum of 4000 hours of recent and relevant work experience are recommended for a career and technical endorsement in agricultural education.

An agriculture, food and natural resources education disciplinary minor is available for teacher certification.

Students who elect the agriculture, food and natural resources education disciplinary major or the agriscience disciplinary minor, must contact the Department of Community Sustainability.

For additional information, refer to the statement on TEACHER CERTIFICATION in the Department of Teacher Education section of this catalog.

GRADUATE STUDY

The Department of Community Sustainability offers Master of Science and Doctor of Philosophy degree programs in Community Sustainability and Sustainable Tourism and Protected Area Management.

Graduate programs in the Department of Community Sustainability provide students the opportunity to create individualized programs that draw from several complementary areas of scholarship. These areas include: community food and agricultural systems; natural resources and the environment; tourism and recreation systems; education and civic engagement; and in-
ternational development. Today’s communities face complex problems due to ongoing changes to our environmental, social and agricultural/food systems. To aid in meeting these challenges, students’ programs are designed to provide a thorough grounding in integrative, applied research based on multiple paradigms, disciplines and methods.

Master’s and doctoral students in the department may choose either degree. Masters students in both degrees select either the Plan A (research-based) or Plan B (project-based) degree. A student may not earn a master’s degree in both programs. Students in the graduate degree programs are eligible for a number of graduate certificates.

Students who are enrolled in Master of Science and Doctor of Philosophy degree programs in the Department of Community Sustainability may elect specializations in resource economics. For additional information, refer to the statement on Interdepartmental Graduate Specializations in Resource Economics.

Students who are enrolled in Master of Science degree programs in the Department of Community Sustainability may elect a Specialization in Environmental Toxicology. For additional information, refer to the Graduate Specialization in Environmental Toxicology statement.

COMMUNITY SUSTAINABILITY

Master of Science

The Master of Science in Community Sustainability provides students with opportunities to engage in integrated and applied research and acquire professional skills.

In addition to meeting the requirements of the university and of the College of Agriculture and Natural Resources, students must meet the requirements specified below. Students may not be admitted to both the Master of Science degree in Community Sustainability and the Master of Science degree in Sustainable Tourism and Protected Area Management.

Admission

Applicants must have completed a bachelor’s degree or comparable degree requirements from an educational institution. Relevant experience and strong academic backgrounds in the natural, physical, or social sciences are encouraged for applicants to the Master of Science in Community Sustainability. All applicants for admission are required to submit scores from the General Test of the Graduate Record Examination. Collateral courses may be required to overcome deficiencies in addition to the requirements for the master’s degree. Collateral course work will not count towards the master’s degree.

Requirements for the Master of Science Degree in Community Sustainability

The student may elect either Plan A (with thesis) or Plan B (without thesis). Plan A emphasizes integrated and applied research and is designed as the foundation for doctoral study. Plan B focuses on the acquisition of well-defined professional skills, appropriate for a terminal degree and for professional employment.

A minimum of 30 credits is required for the degree under Plan A and Plan B. The student’s program of study must be developed in cooperation with and approved by the student’s guidance committee and must include the requirements specified below.

Requirements for Plan A and Plan B

1. Both of the following courses (6 credits):
   - CSUS 800 Foundations of Community Sustainability ............ 3
   - CSUS 802 Survey of Research Methods .......................... 3

2. A minimum of 15 credits in course work in a focus area selected in consultation with the student’s guidance committee. At least 6 credits of this focus area must be in Community Sustainability courses.

3. Additional Requirements for Plan A
   1. A minimum of 3 credits of quantitative or qualitative methods to be selected in consultation with the student’s guidance committee.
   2. A minimum of 6 credits of Community Sustainability 899.
   3. Completion and defense of the master’s thesis.

Additional Requirements for Plan B

1. A minimum of 3 credits of a techniques or skill-building course relevant to the student’s academic and career goals, to be selected in consultation with the student’s guidance committee.

2. Both of the following courses:
   - CSUS 895 Case Studies in Community Sustainability ............ 3
   - CSUS 898 Master’s Professional Project .......................... 3

3. Completion and defense of a paper based on the master’s professional project.

Doctor of Philosophy

The Doctor of Philosophy in Community Sustainability is designed to enable students to generate new knowledge in complementary fields responsive to rapidly changing conditions in our natural environment and agricultural systems.

In addition to meeting the requirements of the university and of the College of Agriculture and Natural Resources, students must meet the requirements specified below.

Admission

To be admitted to the Doctor of Philosophy degree program in Community Sustainability, a student must have completed a master’s degree. Relevant experience and strong academic backgrounds in the natural, physical, or social sciences, including independent research experience, are strongly encouraged. All applicants are required to submit scores from the General Test of the Graduate Record Examination.

Requirements for the Doctor of Philosophy Degree in Community Sustainability

The student’s program of study must be developed in cooperation with and approved by the student’s guidance committee and must include the requirements specified below.

1. Complete Community Sustainability 800.
2. Complete 9 credits of course work in advanced research methods, to be selected in consultation with the student’s guidance committee, including at least 3 credits respectively in quantitative and qualitative methods.
3. Complete a minimum of 24 credits of course work in two focus areas. At least 9 credits and at least one course in each focus area must be selected from Community Sustainability courses.
4. Prepare a comprehensive examination program statement that presents the student’s learning and professional background and goals, and provides a rationale for the student’s declared focus areas. This statement is prepared in consultation with the student’s guidance committee and is presented to the full faculty for review.
5. Pass a comprehensive examination based on the student’s comprehensive examination program statement.
6. Complete 24 credits of dissertation research and successfully defend the dissertation. Present the results of the research in a public seminar during the final oral examination.

All students are encouraged to prepare at least one paper from the dissertation research suitable for submission to a professional and/or refereed academic journal.

SUSTAINABLE TOURISM AND PROTECTED AREA MANAGEMENT

Master of Science

The Master of Science degree in Sustainable Tourism and Protected Area Management provides students with opportunities to engage in integrated and applied research and to acquire professional skills for the study, management, administration and planning of tourism and protected areas under the overarching concept of community sustainability.

In addition to meeting the requirements of the university and of the College of Agriculture and Natural Resources, students must meet the requirements specified below. Students may not be ad-
mitted to both the Master of Science degree in Community, Agriculture, Recreation and Resource Studies and the Master of Science degree in Sustainable Tourism and Protected Area Management.

Admission

Applicants must have completed a bachelor’s degree or comparable degree requirements from an educational institution. Relevant experience and strong academic background in the natural, physical, or social sciences are encouraged. Applicants are required to submit scores from the General Test of the Graduate Record Examination. Collateral courses may be required to overcome deficiencies in addition to the requirements for the master’s degree. Collateral course work will not count towards the master’s degree.

Requirements for the Master of Science Degree in Sustainable Tourism and Protected Area Management

The student may elect either Plan A (with thesis) or Plan B (without thesis). Plan A emphasizes integrated and applied research and is designed as the foundation for doctoral study. Plan B focuses on the acquisition of well-defined professional skills, appropriate for a terminal degree and for professional employment and development. A minimum of 30 credits is required for the degree under Plan A or Plan B. The student’s program of study must be developed in cooperation with and approved by the student’s guidance committee and must include the requirements specified below.

Requirements for Plan A and Plan B

1. All of the following courses (9 credits):
   - CSUS 800 Foundations of Community Sustainability ............ 3
   - CSUS 802 Survey of Research Methods ......................... 3
   - CSUS 814 Sustainable Tourism and Protected Area Management: Theories and Applications ........................ 3

2. A minimum of 12 credits in course work in a focus area selected in consultation with the student’s guidance committee. At least 6 credits of this focus area must be in Community Sustainability (CSUS) courses.

Additional Requirements for Plan A

1. A minimum of 3 credits of quantitative or qualitative methods to be selected in consultation with the student’s guidance committee.
2. A minimum of 6 credits of Community Sustainability 899.

Additional Requirements for Plan B

1. A minimum of 3 credits of a techniques or skill-building course relevant to the student’s academic and career goals, to be selected in consultation with the student’s guidance committee.
2. Both of the following courses (6 credits):
   - CSUS 895 Case Studies in Community Sustainability ............ 3
   - CSUS 898 Master’s Professional Project .......................... 3
3. Completion and defense of a paper based on the master’s professional project.

Doctor of Philosophy

The Doctor of Philosophy degree in Sustainable Tourism and Protected Area Management is designed to enable students to generate new knowledge in the complementary fields of tourism and protected area management under the overarching concept of community sustainability.

In addition to meeting the requirements of the university and of the College of Agriculture and Natural Resources, students must meet the requirements specified below.

Admission

To be admitted to the Doctor of Philosophy degree program in Sustainable Tourism and Protected Area Management, a student must have completed a master’s degree in any field. Relevant experience and strong academic backgrounds in the natural, physical, or social sciences, including independent research experience, are strongly encouraged. All applicants are required to submit scores from the General Test of the Graduate Record Examination.

Requirements for the Doctor of Philosophy Degree in Sustainable Tourism and Protected Area Management

The student’s program of study must be developed in cooperation with and approved by the student’s guidance committee and must include the requirements specified below.

1. Both of the following courses (6 credits):
   - CSUS 800 Foundations of Community Sustainability ............ 3
   - CSUS 814 Sustainable Tourism and Protected Area Management: Theories and Applications .............. 3

If a student already has credit in CSUS 814, these credits must be replaced by another 3 credits of research or a course relevant to one of the student’s two focus areas.

2. Complete a minimum of 9 credits of course work in advanced research methods, to be selected in consultation with the student’s guidance committee, including at least 3 credits respectively in quantitative and qualitative methods.

3. Complete a minimum of 21 credits in course work grouped in two focus areas each of which must have a minimum of 9 credits. Of these, at least 9 credits in total and at least one course in each focus area must be selected from Community Sustainability (CSUS) courses unless the student has previously completed a Master of Science degree in Sustainable Tourism and Protected Area Management.

4. Prepare a comprehensive examination program statement that presents the student’s learning and professional background and goals, and provides a rationale for the student’s declared focus areas. This statement is prepared in consultation with the student’s guidance committee and is presented to the full faculty for review.

5. Pass a comprehensive examination based on the student’s comprehensive examination program statement.

6. Complete 24 credits of doctoral dissertation research and successfully defend the dissertation. Present the results of the research in a public seminar during the final oral examination.

All students are encouraged to prepare at least one paper from the dissertation research suitable for submission to a professional and/or refereed academic journal.

DEPARTMENT of ENTOMOLOGY

F. Willian Ravlin, Chairperson

Entomology is the field of biological science concerned with the study of insects and their relatives in relation to other animals, plants, and the environment. Since insects and their relatives impact many human activities, and must be studied and managed in a variety of environments, an entomologist needs a strong science-based education.

UNDERGRADUATE PROGRAM

The Department of Entomology offers a Bachelor of Science degree. The program emphasizes developing strengths in the physical and biological sciences necessary to work effectively in modern entomology. Courses are designed to give the students an understanding of the structure, classification, identification, function, biology, ecology, and management of beneficial and harmful insects, and the communities and ecosystems where they occur. A minor in Entomology is also available.

Requirements for the Bachelor of Science Degree in Entomology

1. The University requirements for bachelor's degrees as described in the Undergraduate Education section of this catalog; 120 credits, including general elective credits, are required for the Bachelor of Science degree in Entomology.

   The University’s Tier II writing requirement for the Entomology major is met by completing Entomology 479. This course is referenced in Item 3. below.
Students who are enrolled in the Entomology major may complete an alternative track to Integrative Studies in Biological and Physical Sciences by completing Entomology’s mathematics and chemistry requirements and Biological Science 162. These courses meet the laboratory requirement.

2. The requirements of the College of Agriculture and Natural Resources for the Bachelor of Science degree.

The credits earned in certain courses referenced in requirement 3. below may be counted toward College requirements as appropriate.

3. The following major requirements:

a. All of the following courses (47 credits):
   - ENT 404 Fundamentals of Entomology ............... 3
   - ENT 470 Organic Pest Management (W) ............ 3
   - STT 421 Statistics I ................................ 3
   - CEM 141 General Chemistry ....................... 4
   - BS 161 Cell and Molecular Biology ............... 3
   - BS 162 Organismal and Population Biology ....... 3

b. One of the following courses (3 credits):
   - ENT 404 Fundamentals of Entomology ............... 3
   - ENT 470 Organic Pest Management (W) ............ 3
   - STT 421 Statistics I ................................ 3

Higher equivalent course substitutions may be made for Chemistry, Mathematics, and Physics courses with advisor approval.

c. A minimum of 16 credits of course work in entomology as approved by the student’s academic advisor.

MINOR IN ENTOMOLOGY

The Minor in Entomology, which is administered by the Department of Entomology, is designed to serve students in other fields who desire additional training in the insect sciences. It provides an introduction to a range of entomological knowledge, including insect identification, ecology, and management.

The minor is available as an elective to students who are enrolled in bachelor’s degree programs at Michigan State University other than the Bachelor of Science Degree in Entomology. With the approval of the department and college that administers the student’s degree program, the courses that are used to satisfy the minor may also be used to satisfy the requirements for the bachelor’s degree.

Students who plan to complete the requirements for the minor should consult an undergraduate advisor in Entomology.

Other Minor requirements may be used in fulfillment of this requirement with approval from the Entomology undergraduate advisor.

GRADUATE STUDY

The Department of Entomology offers Master of Science and Doctor of Philosophy degree programs. Many of the courses offered by the department are important to other disciplines in the biological and agricultural sciences in the College of Natural Sciences and College of Agriculture and Natural Resources section of this catalog.

Students who are enrolled in the Master of Science degree program in the Department of Entomology may elect a Specialization in Food Safety. For additional information, refer to the statement on the specialization in the College of Veterinary Medicine section of this catalog.

Students enrolled in the Master of Science degree program in the Department of Entomology may elect a specialization in Ecology, Evolutionary Biology and Behavior (EEBB). Students enrolled in the Doctor of Philosophy degree program may pursue a dual degree in EEBB. For additional information refer to the statement on Interdepartmental Degree Programs in the College of Natural Science section of this catalog. For additional information contact the Department of Entomology.

ENTOMOLOGY

Faculty and facilities are available for study in many subject areas, including apiculture and pollination, aquatic systems, behavior, insect biochemistry, biological control, bionomics, ecology, insect economics, forest entomology, medical entomology, morphology, nematology, population dynamics, insect physiology, pest management on many kinds of crops, plant disease vectors, systematics, systems science, environmental and analytical toxicology, and urban and ornamental entomology. Combining many of these specialized subject areas are necessary for all programs of study. Regardless of specialization, the student’s education must provide broad training in related sciences.

Graduate students in entomology look forward chiefly to college teaching; research work in some of the many areas in which insects affect our crops and our lives; professional employment with state, federal, or private agencies or companies; or employment as pest management consultants.

Master of Science

In addition to meeting the requirements of the university and of the College of Agriculture and Natural Resources, students must meet the requirements specified below.

Admission

A bachelor’s degree with a 3.00 grade-point average for the last two years of study is required for admission to the master’s program. Although the applicant need not have an undergraduate major in entomology for regular admission, training should have been received in the physical and biological sciences equivalent to that required of an undergraduate entomology major at Michigan State University. Students without a general entomology background should complete ENT 404 Fundamentals of Entomology during their first year. Graduate Record Examination General Test scores are required. Applicants with a good academic record but with deficiencies in physics, chemistry, mathematics, or the biological sciences may be accepted on a provisional basis until deficiencies have been rectified by collateral course work.

Requirements for the Master of Science Degree in Entomology

The master’s degree program in entomology is available under either Plan A (with Thesis) or Plan B (without thesis). A total of 30 credits is required for the degree under Plan A or Plan B. The student’s program of study must be approved by either the student’s guidance committee (Plan A) or the student’s major professor (Plan B) and is planned on an individual basis by the student, the student’s major professor, and the student’s guidance committee.

23
Requirements for Both Plan A and Plan B

The student must:
1. Complete at least 6 credits in entomology courses at the 400-level or above. More than half of the 30 credits required for the degree must be at the 800-level or above.

Additional Requirements for Plan A
1. Complete at least 6, but not more than 10 credits of Entomology 899.
2. Successfully write and defend the master's thesis research with a departmental seminar.

Additional Requirements for Plan B
1. Complete 3 to 5 credits of a research project in ENT 898 and present a departmental seminar.
2. Pass a final oral examination.

Doctor of Philosophy

The Department of Entomology aspires to develop not only capable entomologists but also capable scholars. Scholarly potential is sought in the prospective student, and course and research programs are designed to round out the student's knowledge and bring it to the stage of development where the student can work creatively in the field.

In addition to meeting the requirements of the university and of the College of Agriculture and Natural Resources, students must meet the requirements specified below.

Admission

A bachelor's degree with a 3.00 grade-point average for the last two years of study is required for admission to the master's program. The applicant need not have an undergraduate major in entomology for regular admission, but should have a background in biology, chemistry, mathematics, physics, and general entomology equivalent to that required of an undergraduate entomology major at Michigan State University. Students without a general entomology background should complete ENT 404 Fundamentals of Entomology during their first year. Graduate Record Examination General Test scores are required. Applicants with a good academic record but with deficiencies may be accepted on a provisional basis until deficiencies have been remediated. Collateral course work does not count towards the requirements for the degree.

Requirements for the Doctor of Philosophy Degree in Entomology

The student's program of study is planned on an individual basis by the students, the student's major professor, and the student's guidance committee. Students must take 9 entomology course credits and complete a minimum of 24 credits of ENT 999 Doctoral Dissertation Research. Within 18 months of matriculation, students must pass a doctoral qualification examination which primarily consists of the defense of a dissertation proposal. Written and oral comprehensive examinations are required after completing course work, covering specific disciplinary areas related to thesis research and broader general knowledge of entomology and related sciences. After completing research, doctoral students are required to write and defend a dissertation with a departmental seminar.

DEPARTMENT of FISHERIES and WILDLIFE

Scott Loveridge, Acting Chairperson

The Department of Fisheries and Wildlife strongly believes that sustainable use of natural resources and a healthy environment are vital to the future of humanity. The faculty, staff and students in the Department of Fisheries and Wildlife strive to meet the global challenges that threaten the sustainability of Earth's ecosystems and their animal populations. Our mission is to build local, national, and international capacities to conserve ecosystems that support fish, wildlife, and society through integrated programs in research, education and engagement. We empower our students and stakeholders with the knowledge, skills, and tools needed to safeguard our natural heritage and promote quality of life for all.

UNDERGRADUATE PROGRAMS

The Fisheries and Wildlife undergraduate major is focused on the interactions between humans and the natural world. Students benefit from courses that link three foundational topics: (1) the ecology of Earth's ecosystems and their animal populations, (2) the diversity of ways in which people use and value natural resources, and (3) the application of management techniques, informed by scientific understanding and guided by human goals and values, to meet the global challenges that threaten the sustainability of Earth's ecosystems and their animal populations. The program of study includes course work in the life sciences, social sciences, and field, lab and analytic techniques; it also includes an experiential learning component, such as study abroad and/or professional internships. This program prepares students with interests in the life sciences, social sciences, and environmental policy for rewarding careers in fisheries, wildlife, or water quality management, conservation biology, animal health, and applied ecology. Our graduates most typically find employment with state and federal natural resource agencies, non-profit environmental organizations, private companies and consulting firms, as well as universities and colleges.

Fisheries and wildlife undergraduates pursue their particular interests through completion of one of the following six concentrations, each of which delves more deeply into particular sub-components of this broad field.

Conservation Biology focuses on the science of analyzing and protecting the earth's biological diversity drawing from the biological, physical and social sciences, economics, and the practice of natural resource management.

Fisheries Biology and Management is designed for students interested in the research and management of fish, other freshwater and marine organisms, and the ecosystems that sustain them.

Wildlife Biology and Management is for students interested in understanding and managing terrestrial habitats and animals including game, non-game, and endangered species.

Water Sciences is designed for students interested in examining the biological, physical, chemical, geological and hydrological aspects of lakes and ponds, rivers and streams, wetlands and groundwaters including water quality. This concentration provides students with an understanding for protecting and restoring water resources around the Great Lakes and the world.

Fish and Wildlife Disease Ecology and Management is designed to provide students with an improved understanding of the emergence and spread of infectious diseases and the likely consequences that increased contact between fish and wildlife, and
Requirements for the Bachelor of Science Degree in Fisheries and Wildlife

1. The University requirements for bachelor's degrees as described in the Undergraduate Education section of this catalog; 120 credits, including general elective credits, are required for the Bachelor of Science degree in Fisheries and Wildlife.

2. The requirements of the College of Agriculture and Natural Resources for the Bachelor of Science degree.

3. The following requirements for the major:

   a. One of the following groups of courses (9 or 10 credits):
      (1) BS 161 Cell and Molecular Biology .................3
      (2) LS 151 Cell and Molecular Biology Laboratory ......2
      (1) BS 162 Organismal and Population Biology .......3
      (1) BS 172 Organismal and Population Biology Laboratory ......2
      (2) LB 144 Biology I – Organismal Biology ..........4
      (2) LB 145 Biology II – Cellular and Molecular Biology ....5
      (2) CEM 141 General Chemistry ..................4
      (2) CEM 161 Chemistry Laboratory I .................1
      (2) CEM 151 General and Descriptive Chemistry .......4
      (2) CEM 161 Chemistry Laboratory I .................1
      (2) LB 171 Principles of Chemistry I .................4
      (2) LB 171L introduction Chemistry Laboratory I ......1
      (2) LB 145 Introduction to Probability and Statistics for Ecologists ............3
      (1) PHY 231 Introductory Physics I ..................3
      (2) PHY 183 Physics for Scientists and Engineers I ....4
      (2) LB 273 Physics I ............................3
      (2) CSS 210 Fundamentals of Soil Science ............3
      (1) GLG 201 The Dynamic Earth ....................4
      (1) GEO 203 Introduction to Meteorology ..........3
      (1) GEO 206 Physical Geography ......................3
      (2) MTH 124 Survey of Calculus I ..................3
      (2) MTH 132 Calculus I ..........................3
      (2) LB 118 Calculus I ................................3
      (2) STT 231 Statistics for Scientists .................3
      (2) STT 224 Introduction to Probability and Statistics for Ecologists ............3
      (2) STT 421 Statistics I ............................3
      (1) COM 100 Human Communication .................3
      (1) COM 225 Introduction to Interpersonal Communication ...............3
      (1) COM 275 Effects of Mass Communication ............3
      (1) CSSUS 433 Grant Writing and Fund Development (W) ........3
      (2) FW 435 Integrated Communications for the Fisheries and Wildlife Professionals ........3
      (1) JRN 472 Environmental, Science and Health Reporting ........3
      (1) WRA 320 Technical Communication (W) ..........3
      (2) WRA 331 Writing in the Public Interest (W) ..........3
      (2) WRA 341 Nature, and Environmental Writing ..........3
      (2) WRA 453 Grant and Proposal Writing ..............3
      (2) FW 439 Conservation Ethics ....................3
      (2) PHL 340 Ethics ................................3
      (2) PHL 342 Environmental Ethics ..................3
      (2) PHL 380 Nature of Science ......................3
      (2) GEO 432 Environmental Ethics (W) ..............3

   g. Complete at least 3 credits from the following courses:
      (1) FW 493 Professional Internship in Fisheries and Wildlife ........3
      (1) FW 490 Independent Study in Fisheries and Wildlife ..........3
      (1) FW 480 International Studies in Fisheries and Wildlife ..........3
      (1) FW 499 Senior Thesis in Fisheries and Wildlife ..........4

   h. One of the following courses (17 credits):
      (1) FW 101 Fundamentals of Fisheries and Wildlife Ecology and Management ........3
      (1) FW 293 Undergraduate Seminar in Fisheries and Wildlife ..........3
      (1) FW 364 Ecological Problem Solving ................3
      (1) FW 424 Population Analysis and Management ..........4
      (1) FW 434 Human Dimension of Fisheries and Wildlife Management (W) ..........3
      (1) IBIO 355 Ecology ................................3
      (2) FW 401 Fundamentals of Fisheries and Wildlife Ecology and Management Laboratory ..........2
      (1) FW 238 Introductory Fisheries and Wildlife Field Experience ..........3

   j. One of the following concentrations:
      Conservation Biology (27 to 29 credits):
      (1) All of the following courses (12 credits):
         FW 444 Conservation Biology ....................3
         FW 445 Biodiversity Conservation Policy and Practice ........3
         IBIO 445 Evolution (W) ..........................3
         PLB 443 Restoration Ecology ......................3
      (2) One of the following courses (3 credits):
         FOR 404 Forest Ecology .........................3
         IBIO 485 Tropical Biology (W) ..................3
         PLB 441 Plant Ecology ..........................3
      (3) One of the following courses (3 or 4 credits):
         CSS 350 Introduction to Plant Genetics ............3
         IBIO 341 Fundamental Genetics ..................4
      (4) One of the following courses (3 or 4 credits):
         FW 410 Upland Ecosystem Management ..........3
         FW 414 Aquatic Ecosystem Management ..........3
         FW 416 Marine Ecosystem Management ..........3
         FW 417 Wetland Ecology and Management ..........3
         FW 454 Environmental Hydrology for Watershed Management ..........3
         FW 479 Fisheries Management ....................3
      (5) One of the following courses (3 credits):
         CSSUS 464 Environmental and Natural Resource Policy in Michigan ..........3
         EEM 255 Ecological Economics ..................3
         FW 449 Wildlife Policy ..........................3
         FW 481 Global Issues in Fisheries and Wildlife ..........3
         FOR 466 Natural Resource Policy ................3
         IBIO 446 Environmental Issues and Public Policy ..........3
         MC 450 International Environmental Law and Policy ..........3
      (6) One of the following courses (3 or 4 credits):
         ENT 422 Aquatic Entomology ....................3
         FOR 204 Forest Vegetation ........................3
         FW 471 Ichthyology ................................3
         IBIO 360 Biology of Birds ........................4
         IBIO 365 Biology of Mammals .....................4
         IBIO 384 Biology of Amphibians and Reptiles (W) ..........4
         PLB 218 Plants of Michigan .......................3
         PLB 418 Plant Systematics .........................3

   Fisheries Biology and Management (25 to 28 credits):
      (1) All of the following courses (3 credits):
         FW 472 Limnology ................................3
         FW 420 Stream Ecology .........................3
      (2) All of the following courses (10 credits):
         FW 471 Ichthyology ..............................4
         FW 479 Fisheries Management ..................3
         FW 474 Field and Laboratory Techniques for Aquatic Studies ..........3
      (3) One of the following courses (3 credits):
         FW 414 Aquatic Ecosystem Management ..........3
         FW 416 Marine Ecosystem Management ..........3
         FW 417 Wetland Ecology and Management ..........3
         FW 454 Environmental Hydrology for Watershed Management ..........3
      (4) One of the following courses (3 or 4 credits):
         ENT 404 Fundamentals of Entomology ..........3
         ENT 422 Aquatic Entomology ....................3
         IBIO 360 Invertebrate Biology (W) ...............4
      (5) One of the following courses (3 or 4 credits):
         PLB 418 Plant Systematics .........................3
         PLB 424 Algal Ecology ..........................4
      (6) One of the following courses (3 or 4 credits):
         CSSUS 350 Introduction to Plant Genetics ............3
         FW 431 Ecophysiology and Toxicology of Fishes ..........3
         CSSUS 328 Comparative Anatomy and Biology of Vertebrates (W) ..........4
         IBIO 341 Fundamental Genetics ..................4

   Wildlife Biology and Management (20 or 27 credits):
      (1) All of the following courses (9 credits):
         FW 410 Upland Ecosystem Management ..........3
         FW 417 Wetland Ecology and Management ..........3

Agriculture and Natural Resources
Department of Fisheries and Wildlife

Domestic animal and human populations have been on these environmental problems.

Prevetinary is designed for students who are interested in careers in veterinary medicine and satisfies the course requirements for admission to Michigan State University's College of Veterinary Medicine. Dual advising at the College of Veterinary Medicine is required.

Students who complete the requirements for the Fisheries and Wildlife major and choose elective courses appropriately can also satisfy requirements for certification by: the American Fisheries Society as an Associate Fisheries Scientist; the Wildlife Society as an Associate Wildlife Biologist; the Society of Wetland Scientists as a Wetland Professional-in-training.
MINOR IN CONSERVATION, RECREATION AND ENVIRONMENTAL ENFORCEMENT

The Minor in Conservation, Recreation and Environmental Enforcement is designed to combine the natural resource expertise of the fisheries and wildlife, forestry, parks, recreation and tourism, and environmental sustainability programs, with the law enforcement expertise of the criminal justice program to serve those students with career interests in conservation, recreation or environmental law enforcement. The minor is available as an elective to students who are enrolled in bachelor’s degree programs in criminal justice, fisheries and wildlife, forestry, parks, recreation and tourism and environmental studies and sustainability. The minor is administered by the Department of Fisheries and Wildlife.

Students who are interested in enrolling should apply to the Department of Fisheries and Wildlife for acceptance.

With the approval of the department and college that administer the student’s degree program, courses that are used to satisfy the requirements for the minor may also be used to satisfy the requirements for the bachelor’s degree.

Requirements for the Minor in Conservation, Recreation and Environmental Enforcement

The student must complete (19 to 20 credits):

CREDITS

1. Complete both of the following courses (4 credits):
   - CJ 110 Introduction to Criminal Justice ................. 3
   - CSUS 278 Introduction to Conservation, Recreation and Environmental Enforcement ................. 1

Natural Resources Conservation and Management

6 or 7

1. One of the following courses (3 credits):
   - CSUS 200 Introduction to Sustainable Forest Management ................. 3
   - CSUS 276 Sustaining our National Parks and Recreation Lands ................. 3
   - FOR 202 Introduction to Forestry ................. 3
   - FW 101 Fundamentals of Fisheries and Wildlife ................. 3

2. One of the following courses (3 or 4 credits):
   - CSUS 320 Environmental Planning and Management ................. 3
   - CSUS 476 Natural Resource Recreation Management ................. 3
   - FW 444 Conservation Biology ................. 3
   - FW 481 Global Issues in Fisheries and Wildlife ................. 3

Environmental Attitudes, Policy and Law

3

1. One of the following courses (3 credits):
   - CSUS 310 History of Environmental Thought and Sustainability ................. 3
   - CSUS 464 Environmental and Natural Resource Policy in Michigan ................. 3
   - CSUS 465 Environmental and Natural Resource Law ................. 3
   - FOR 330 Human Dimensions of Forests ................. 3
   - FOR 466 Natural Resource Policy ................. 3
   - FW 434 Human Dimensions of Fisheries and Wildlife Management (W) ................. 3
   - FW 445 Biodiversity Conservation Policy and Practice ................. 3
   - MC 450 International Environmental Law and Policy ................. 3
   - NEU 452 Environment and Society ................. 3

Law Enforcement

6

1. Two of the following courses (6 credits):
   - CJ 210 Introduction to Police Science ................. 3
   - CJ 220 Criminology ................. 3
   - CJ 235 Investigation Procedures ................. 3
   - CJ 275 Criminal Procedure ................. 3
   - CJ 335 Policing ................. 3
   - CJ 432 Community Policing ................. 3
MINOR IN MARINE ECOSYSTEM MANAGEMENT

The Minor in Marine Ecosystem Management is designed to provide students with a fundamental background in ecosystem management of marine natural resources. Students gain insight and experience in marine management issues relative to estuarine, coastal, and open-water marine ecosystems from the perspective of habitat, biota and human resource users. Students are also exposed to the management skills necessary to recognize and use effective techniques to conserve, preserve and restore marine ecosystem integrity for the benefit of society. This unique management emphasis serves the career interests of students well as they pursue positions in the marine sciences.

The Minor in Marine Ecosystem Management is available as an elective to students who are enrolled in Bachelor of Science degree programs with majors in Fisheries and Wildlife, and Zoology. The minor is administered by the Department of Fisheries and Wildlife. With the approval of the department and college that administer the student’s degree program, courses that are used to satisfy the requirements for the minor may also be used to satisfy the requirements for the bachelor's degree.

Students who plan to complete the requirements for the marine ecosystem management minor should contact the undergraduate advisor for fisheries and wildlife in the Department of Fisheries and Wildlife.

GRADUATE STUDY

The mission of the Fisheries and Wildlife department is to build local, national, and international capacities to conserve ecosystems that support fish, wildlife, and society through integrated programs in research, education and engagement. The department’s faculty, students and staff address a wide range of research themes that fall along spectrums of disciplinary expertise, scientific approaches to understanding, collaborators, funding sources, and stakeholder groups. Our expertise ranges from disciplinary areas with a long-standing history in the domain of fisheries and wildlife to those emerging more recently. Collectively, we are tackling challenges and developing solutions in areas including, but not limited to: managing for sustainable harvest of fisheries and wildlife populations, developing sound governance structures and effective policies, assessing the ecological status of animal populations and their ecosystems at broad geographic scales, incorporating the diverse ways that humans use and value natural resources into management processes and decisions, and understanding and responding to emerging infectious diseases, global climate change, human-wildlife conflict, wildlife trafficking, environmental toxins, and invasive species.

The department's graduate program is a national leader in the training of students for careers in research, management, teaching, extension and consulting. The Department of Fisheries and Wildlife offers a thesis or non-thesis Master of Science (M.S.) degree and a Doctoral (Ph.D.) degree in Fisheries and Wildlife. Graduates of our master's program are hired by a variety of local, state and federal governmental agencies, private corporations, museums, zoos and nature centers, tribal organizations, and environmental consulting firms. Ph.D. graduates are employed on the faculty of leading universities and compete successfully for positions outside of academia, such as research positions with federal agencies. Approximately 100 graduate students are currently enrolled, and the majority of these students receive financial assistance in the form of graduate assistantships.

Graduate student research projects span the department’s diverse disciplinary areas. These projects take advantage of modern computing facilities, a world-class library, university research stations, department relationships with a global network of scientists, management agencies, and stakeholder groups, and the tremendous natural resources of Michigan. Graduate students are also involved in projects of national and international scope and present research results to a wide range of regional, national and international audiences.

The Department of Fisheries and Wildlife offers Master of Science and Doctor of Philosophy degree programs in fisheries and wildlife, a Doctor of Philosophy degree program in fisheries and wildlife—environmental toxicology, and a Graduate Certificate in Conservation Law.

Students in the Master of Science degree program in fisheries and wildlife are eligible for the dual JD program with Michigan State University - College of Law.

Students who are enrolled in Master of Science and Doctor of Philosophy degree programs in the Department of Fisheries and Wildlife may elect specializations in environmental and resource economics, fish and wildlife disease ecology and conservation medicine, and gender, justice and environmental change. For additional information, refer to the statements on Interdepartmental Graduate Specializations in Environmental and Resource Economics, Graduate Specialization in Fish and Wildlife Disease Ecology and Conservation Medicine, and the Graduate Specialization in Gender, Justice, and Environmental Change in this catalog.

FISHERIES AND WILDLIFE

Programs of study are based on the academic preparation, interests, and career goals of individual students. Although individual students’ programs vary, all Master of Science programs in fisheries and wildlife are designed to provide preparation in one of the areas of specialization within the field of fisheries and wildlife, broad preparation in related areas, and a foundation for fisheries and wildlife related careers in administration, research, and management.

Master of Science

In addition to meeting the requirements of the university and of College of Agriculture and Natural Resources, the student must meet the requirements specified below.

Admission

Admission to a master's program requires prior completion of an undergraduate major in a biological or other appropriate science with course work appropriate to support the graduate program. Students lacking sufficient courses may be admitted provisionally until such deficiencies are removed by completing collateral
AGRUCULTURE AND NATURAL RESOURCES  
Department of Fisheries and Wildlife

courses. Scores on the Graduate Record Examination General Test are required.

Requirements for the Master of Science Degree in Fisheries and Wildlife

The student may elect either Plan A (with thesis) or Plan B (without thesis). A total of 30 credits is required for the degree under either Plan A or Plan B. The student and the major professor plan a program of study that includes FW 894 and courses related to one or more areas of specialization within the field of fisheries and wildlife. Students are required to plan and execute a departmentally approved outreach experience, or in lieu of this, include FW 895 in their approved program. The program must be approved by the student's guidance committee which includes at least two members in addition to the major professor, at least one of which is from the Department of Fisheries and Wildlife.

Doctor of Philosophy

In addition to meeting the requirements of the university and of College of Agriculture and Natural Resources, the student must meet the requirements specified below.

Admission

Applicants for a doctoral program should have completed a Bachelor of Science degree in a biological or other appropriate science. For some areas of specialization, additional background in mathematics, chemistry, botany, zoology or a related Master of Science degree is desirable. Scores on the Graduate Record Examination General Test are required.

Requirements for the Doctor of Philosophy Degree in Fisheries and Wildlife

The student and the major professor plan a program of study that includes FW 894 and courses related to one or more areas of specialization within the field of fisheries and wildlife. Students are required to plan and execute a departmentally approved outreach experience, or in lieu of this, include FW 895 in their approved program. The program must be approved by the student's guidance committee, which includes at least three members in addition to the major professor, at least one of whom is from a department other than Fisheries and Wildlife and at least one of whom is from the Department of Fisheries and Wildlife.

FISHERIES AND WILDLIFE—ENVIRONMENTAL TOXICOLOGY

Doctor of Philosophy

For information about the Doctor of Philosophy degree program in fisheries and wildlife—environmental toxicology, refer to the statement on Doctoral Program in Environmental and Integrative Toxicological Sciences in the Graduate Education section of this catalog.

GRADUATE CERTIFICATE IN CONSERVATION LAW

The Graduate Certificate in Conservation Law provides students an opportunity to explore conservation law by gaining familiarity with the language, theory and practices of the law discipline to better integrate their core education with their respective environmental or conservation-related disciplinary field.

The graduate certificate is available as an elective to students who are enrolled in master’s or doctoral degree programs at Michigan State University.

Requirements for the Graduate Certificate in Conservation Law

Students must complete both of the following courses (9 credits):

DEPARTMENT of FOOD SCIENCE and HUMAN NUTRITION

Nancy Turner, Chairperson

The mission of the department of Food Science and Human Nutrition is to advance human health through excellent teaching, research, and outreach programs in the disciplines of food science and human nutrition. Our faculty address contemporary issues related to global food safety, quality, food product development, and production as well as nutrition in the context of human health, chronic disease prevention, food security, and dietetics.

UNDERGRADUATE PROGRAMS

The department offers Bachelor of Science degree programs with majors in Dietetics, Food Science, and in Nutritional Sciences. Additional information describing career opportunities for each of these majors may be found in the sections below. Minors in Beverage Science and Technology, and in Food Processing and Technology are also available.

Students who are enrolled in the Bachelor of Science degree program with a major in food science may elect a Minor in Plant, Animal, and Microbial Biotechnology. For additional information, refer to the Minor in Plant, Animal, and Microbial Biotechnology statement.

DIETETICS

The undergraduate program in dietetics has been approved by the Academy of Nutrition and Dietetic’s Accreditation Council for Education in Nutrition and Dietetics (ACEND) as a Didactic Program that meets the minimum academic requirements for professionally qualified dietitians.

The undergraduate program in dietetics is designed so that supporting disciplines provide a knowledge base prerequisite to the professional courses. Course offerings are sequenced to build upon previous knowledge and provide increasingly complex experiences. The student is expected to acquire approximately equal expertise in nutritional assessment and care and in foodservice management systems.

Verification of successful completion of the ACEND-approved minimum academic requirements is the responsibility of the Dietetic Program Director in the Department of Food Science and Human Nutrition.
Persons who wish to receive a final Verification Statement for the fulfillment of ACEND-approved minimum academic requirements from Michigan State University, but who have not completed a Bachelor of Science degree with a Dietetics major at Michigan State University, must complete a minimum of 10 credits in 300—400 level courses in dietetics at Michigan State University with a minimum grade of 2.0 or better in each course.

Eligibility for the Registration Examination for Dietitians is determined by verification of successful completion of an ACEND-approved Didactic Program in Dietetics and one of the following supervised practice experiences: ACEND-approved Dietetic Internship, or ACEND-approved Accredited Coordinated Program. Dietetic registration, as administered by the Commission on Dietetic Registration, is a requirement of most positions for professional dietitians.

Admission as a Junior
Enrollment in the dietetics major is limited. The Bachelor of Science Degree in Dietetics is a professional degree, which requires acceptance into a competitive internship in order to complete the requirements for eligibility to take the registered dietitian examination. A minimum cumulative grade-point average of 2.5 is necessary to be considered for admission.

Requirements for the Bachelor of Science Degree in Dietetics
1. The University requirements for bachelor's degrees as described in the Undergraduate Education section of this catalog.

The University's Tier II writing requirement for the Dietetics major is met by completing Human Nutrition and Foods 300, 471 and 472. Those courses are referenced in item 3. a. below.

Students who are enrolled in the Dietetics major leading to the Bachelor of Science degree in the Department of Food Science and Human Nutrition may complete an alternative track to Integrative Studies in Biological and Physical Sciences that consists of the following courses: Biochemistry 200 or Physiology 250; Chemistry 141, 143, and 161. The completion of Chemistry 143 and 161 satisfies the laboratory requirement.

2. The requirements of the College of Agriculture and Natural Resources for the Bachelor of Science and Bachelor of Arts degrees.

3. The following requirements for the major:

   a. All of the following courses in the Department of Food Science and Human Nutrition: ..........................42

      HNF 160 Introduction to Human Nutrition . ......... 3
      HNF 300 Experimental Approaches to Foods ........ 4
      HNF 320 Professional Practice of Dietetics and Nutrition ...... 3
      HNF 370 Advanced Human Nutrition and Metabolism ....... 4
      HNF 377 Applied Community Nutrition .................. 4
      HNF 400 Art and Science of Food Preparation ............ 2
      HNF 406 Global Foods and Culture ..................... 3
      HNF 411 Service Operations ............................. 3
      HNF 444 The Business of Nutrition Services ............ 3
      HNF 445 Foodservice Management Practicum ............. 2
      HNF 453 Nutrition and Human Development ............. 3
      HNF 471 Medical Nutrition Therapy I ........................ 4
      HNF 472 Medical Nutrition Therapy II .................... 4

   b. The following courses outside the Department of Food Science and Human Nutrition: ............................ 39 to 42

      (1) All of the following courses (30 credits):

          ANTR 350 Human Gross Anatomy for Pre-Health Professionals . .................. 3
          BMB 200 Introduction to Biochemistry ........................................... 4
          CEM 141 General Chemistry ....................................................... 4
          CEM 143 Survey of Organic Chemistry ......................................... 4
          CEM 161 Chemistry Laboratory I ............................................... 1
          FSC 342 Food Safety and Hazard Analysis Critical Control Point Program .... 3
          MGT 325 Management Skills and Processes ................................... 3
          PSL 250 Introductory Physiology ................................................. 4
          PSY 101 Introductory Psychology ................................................. 4

      (2) One of the following courses (3 or 5 credits):

          MTH 103 College Algebra ......................................................... 3
          MTH 116 College Algebra and Trigonometry .................................. 5

      (3) One of the following courses (3 or 4 credits):

          STT 200 Statistical Methods ..................................................... 3
          STT 201 Statistical Methods ..................................................... 4

      (4) The following course (3 credits):

          CSE 101 Computing Concepts and Competencies ........................... 3

   Students who pass a waiver examination will not be required to complete Computer Science and Engineering 101.

FOOD SCIENCE

Graduates with a Bachelor of Science degree in food science may be employed by food and allied industries, federal and state governments, and universities to work at the interface between the production and delivery of food. The program also prepares students for advanced study in graduate and professional schools. The required courses stress the principles of food safety and preservation and the application of scientific principles to control and enhance the flavor, color, texture, and nutritive value. In addition to the core program, students in food science must complete one of the following interdisciplinary concentrations that are designed to provide additional breadth and depth: basic food science, food business and industry, food packaging, or food technology.

Basic Food Science. This concentration is designed for students with an interest in integrating in-depth study of basic sciences with the core of their food science education. Advanced courses in chemistry, microbiology, food safety, toxicology and pharmacology are among the fields students may elect to strengthen their bachelor's degree. Students interested in professional post-graduate education such as medicine and dentistry may elect to take a series of courses that meet the admission standards for most professional colleges.

Food Business and Industry. This concentration is designed for students who are interested in working for food or food-related businesses, where a knowledge of both food science and of food business management, economics, and marketing is important. Students who complete this concentration may pursue careers in manufacturing management, technical sales, food product marketing, or similar areas or may pursue graduate study in business.

Food Packaging. This concentration is designed to prepare students for careers in the food industry with an emphasis in food packaging. The concentration focuses on the design, use, and evaluation of food packaging materials and the effect of packaging materials on the shelf life of food. Students who complete this concentration may pursue graduate study in packaging or food science.

Food Technology. This concentration focuses on food processing methods and their effect on food quality and process characteristics. Students who complete this concentration may pursue careers in production supervision, quality assurance, inspection, product development, and process development. They may also pursue graduate study to prepare for positions in research, production, and management in the food industry, government, or universities.

Requirements for the Bachelor of Science Degree in Food Science
1. The University requirements for bachelor's degrees as described in the Undergraduate Education section of this catalog; 120 credits, including general elective credits, are required for the Bachelor of Science degree in Food Science.

The University's Tier II writing requirement for the Food Science major is met by completing all of the following courses: Food Science 402, 440, 441, 445, 470. Those courses are referenced in item 3.a. below.

Students who are enrolled in the Food Science major leading to the Bachelor of Science degree in the Department of Food Science and Human Nutrition may complete an alternative track to Integrative Studies in Biological and Physical Sciences that consists of the following courses: Biological Science 161, Chemistry 161 and 162, and Physics 231. The completion of Chemistry 161 and 162 satisfies the laboratory requirement.

The completion of the College of Agriculture and Natural Resources mathematics requirement may also satisfy the University mathematics requirement.

2. The requirements of the College of Agriculture and Natural Resources for the Bachelor of Science degree.

   Certain courses referenced in requirement 3. below may be counted toward College requirements as appropriate. The completion of Mathematics 124 satisfies the College's mathematics requirement.

3. The following requirements for the major:

   a. All of the following courses: .................................................. 54

      (1) All of the following courses (30 credits): 

          ANTR 350 Human Gross Anatomy for Pre-Health Professionals . ........ 3
          BMB 200 Introduction to Biochemistry ........................................ 4
          CEM 141 General Chemistry .................................................... 4
          CEM 143 Survey of Organic Chemistry ....................................... 4
          CEM 161 Chemistry Laboratory I ............................................. 1
          FSC 342 Food Safety and Hazard Analysis Critical Control Point Program .... 3
          MGT 325 Management Skills and Processes ................................ 3
          PSL 250 Introductory Physiology ............................................. 4
          PSY 101 Introductory Psychology ............................................ 4

      (2) One of the following courses (3 or 5 credits):

          MTH 103 College Algebra ..................................................... 3
          MTH 116 College Algebra and Trigonometry ................................ 5

      (3) One of the following courses (3 or 4 credits):

          STT 200 Statistical Methods .................................................. 3
          STT 201 Statistical Methods .................................................. 4

      (4) The following course (3 credits):

          CSE 101 Computing Concepts and Competencies ........................... 3

   Students who pass a waiver examination will not be required to complete Computer Science and Engineering 101.

Courses selected to meet this requirement may not be used
to fulfill requirement 3 b. or c. above.

CREDITS

NUTRITIONAL SCIENCES

The nutritional sciences major emphasizes intensive study in biolog-
ical and physical sciences as a basis for understanding the sci-
ence of nutrition and the relationships between nutrients and
human health. Core course requirements emphasize human nu-
trition with areas of study in energy metabolism, proteins, vita-
minds, minerals, and nutrition in the prevention and treatment of
disease. Issues and techniques involved in nutrition research,
and a food and nutrition laboratory course are included in the core
courses. Supporting discipline courses emphasize biochemistry,
biology, chemistry, mathematics, microbiology, physics and phys-
iology.

This major offers the opportunity to concentrate in one of three
areas. The biomedical nutrition concentration is designed to meet
the admissions requirements of most colleges of medicine, dent-
istry and paramedical colleges while the student pursues a bach-
elor’s degree in a clinically related area. The global nutrition and
health concentration emphasizes the international aspects of nu-
trition within the context of sustainability, policy, food security,
and agricultural systems. The public health nutrition concentra-
tion allows students to develop skills in biostatistics, epidemiol-
gy, and program planning and evaluation, in the context of
nutrition and population health. The major also prepares students
to enter graduate school programs in nutrition and other life sci-
ences. Graduates in nutritional sciences qualify for positions in
the food industry, corporate wellness and health promotion pro-
grams, public health programs, pharmaceutical sales and similar
occupations.

Requirements for the Bachelor of Science Degree
in Nutritional Sciences

1. The University requirements for bachelor’s degrees as described in the Undergradu-
ation Education section of this catalog.

The University’s Tier II writing requirement for the Nutritional Sciences major is met
by completing Human Nutrition and Foods 450. This course is referenced in item 3.
below.

Students who are enrolled in the Nutritional Sciences major leading to the Bachelor
of Science degree in the Department of Food Science and Human Nutrition may com-
plete an alternative track to Integrative Studies in Biological and Physical Sciences
that consists of the following courses: Chemistry 141, 161, Biological Science 161 and
171. The completion of Chemistry 161 and Biological Science 171 satisfies the labora-
tyory requirement.

2. The requirements of the College of Agriculture and Natural Resources for the Bachelor
of Science degree.

The credits earned in certain courses referenced in item 3. below may be counted to-
ward college requirements as appropriate.

The completion of Mathematics 124 or 132 or Lyman Briggs 118 satisfies the college
mathematics requirement.

3. The following requirements for the major:

CREDITS

a. The following courses ............................................... 41 to 43

(1) All of the following courses (17 credits):
   COM 100 Human Communication ............................... 3
   CSS 124 Introduction to Sustainable Agriculture and
   Food Systems .......................................................... 2
   FSC 211 Principles of Food Science ............................ 3
   FSC 455 Food and Nutrition Laboratory ...................... 3

(2) The completion of mathematics requirement.

(3) Students who are enrolled in the Nutritional Sciences major leading to the Bachelor
of Science degree in the Department of Food Science and Human Nutrition may com-
plete an alternative track to Integrative Studies in Biological and Physical Sciences
that consists of the following courses: Chemistry 141, 161, Biological Science 161 and
171. The completion of Chemistry 161 and Biological Science 171 satisfies the labora-
tyory requirement.

(4) The requirements of the College of Agriculture and Natural Resources for the Bachelor
of Science degree.

(5) The credits earned in certain courses referenced in item 3. below may be counted to-
ward college requirements as appropriate.

The completion of Mathematics 124 or 132 or Lyman Briggs 118 satisfies the college
mathematics requirement.

The following requirements for the major:

CREDITS

a. The following courses ............................................... 41 to 43

(1) All of the following courses (17 credits):
   COM 100 Human Communication ............................... 3
   CSS 124 Introduction to Sustainable Agriculture and
   Food Systems .......................................................... 2
   FSC 211 Principles of Food Science ............................ 3
   FSC 455 Food and Nutrition Laboratory ...................... 3
b. One of the following concentrations:  

**Biomedical and Molecular Nutrition (40 to 50 credits):**

(1) All of the following courses (11 credits):
   - **CEM 251** Organic Chemistry I ............3
   - **CEM 252** Organic Chemistry II ...........3
   - **CEM 255** Organic Chemistry Laboratory ....4
   - **LB 118** Calculus I........................................4

(2) One of the following courses (3 or 4 credits):
   - MTH 124 Survey of Calculus I ......................3
   - MTH 132 Calculus Methods ..................................4
   - LB 118 Calculus I ........................................4

(3) One course from each of the following groups (a) and (b) (5 or 6 credits):
   - (a) **CEM 141** General Chemistry ..................4
   - **CEM 151** General and Descriptive Chemistry ....4
   - **CEM 181H** Honors Chemistry I ....................4
   - **171** Principles of Chemistry I ......................3
   - **CEM 161** Chemistry Laboratory I ...............1
   - **CEM 185H** Honors Chemistry Laboratory II ......2
   - LB 171L Introductory Chemistry Laboratory I ....1

(4) One of the following courses (3 or 4 credits):
   - MTH 123 Trigonometry ..................................4
   - MTH 131 Calculus I .....................................4
   - LB 118 Calculus I ........................................4

(5) Completion of a minimum of 3 credits in Experiential Learning. Students must consult with their academic advisor for specific details on this requirement. Completion of this requirement may be fulfilled by enrollment in ANR 475, HNF 490, HNF 490H, HNF 494, or any approved study abroad, service research, or internship experience.

**Public Health Nutrition (40 to 43 credits):**

(1) All of the following courses (23 credits):
   - HM 101 Introduction to Public Health ..........3
   - HNF 377 Applied Community Nutrition ............4
   - HNF 385 Public Health Nutrition ................3
   - HNF 485 Advanced Public Health Nutrition ........3
   - PSL 310 Physiology for Pre-Health Professionals .4
   - STT 421 Statistics I ..................................3
   - STT 422 Statistics II ................................3

(2) One of the following, either (a) or (b) (4 or 6 credits):
   - (a) CEM 143 Survey of Organic Chemistry ........4
   - (b) CEM 251 Organic Chemistry I ..................4

(3) One of the following courses (4 credits):
   - CSUS 429 Program Evaluation for Community Sustainability ...............3
   - CSUS 433 Grant Writing and Fund Development (W) ....3

(4) Two of the following courses (6 or 7 credits):
   - ANP 270 Women and Health: Anthropological and Interdisciplinary Perspectives .............3
   - ANP 370 Culture, Health, and Illness .............3
   - ANP 443 Human Adaptability .........................3
   - EPI 240 Epidemiological Investigations in Nutrition and Health ..................3
   - EPI 390 Disease in Society: Introduction to Epidemiology and Public Health ..........4

**MINOR IN BEVERAGE SCIENCE AND TECHNOLOGY**

The Minor in Beverage Science and Technology is designed to provide students with fundamental knowledge of the production of fermented beverages. Certain courses in this minor are only offered at off-campus wineries or breweries. The minor is available as an elective to students who are enrolled in bachelor's degree programs at Michigan State University. The minor is administered by the Department of Food Science and Human Nutrition.

With the approval of the department and college that administers the student’s degree program, the courses that are used to satisfy the requirements for the minor may also be used to satisfy the requirements for the bachelor's degree.

**Requirements for the Minor in Beverage Science and Technology**

**CREDITS**

Students must complete 15 credits from the following:

1. One of the following courses (3 credits):
   - FSC 342 Food Safety and Hazard Analysis Critical Control Point Program ........3
   - MMG 201 Fundamentals of Microbiology ..........3
   - MMG 301 Introductory Microbiology ..................3

2. One of the following courses (3 credits):
MINOR IN FOOD PROCESSING AND TECHNOLOGY

The Minor in Food Processing and Technology is available as an elective to students who are enrolled in bachelor's degree programs in the College of Agriculture and Natural Resources (other than the Bachelor of Science degree program with a major in food science), The School of Hospitality Business, and the Department of Microbiology and Molecular Genetics and to students who are enrolled in the Environmental Biology/Microbiology and Microbiology coordinate majors in Lyman Briggs College. The Department of Food Science and Human Nutrition administers the minor.

The primary educational objective of the minor is to provide students with basic knowledge of food processing. The undergraduate coordinator for food science in the Department of Food Science and Human Nutrition is available to assist students in planning their programs of study for the minor.

With the approval of the college and department that administer the student's degree program, the courses that are used to satisfy the requirements for the minor may also be used to satisfy the requirements for the bachelor's degree.

Requirements for the Minor in Food Processing and Technology

The student must complete:

1. One of the following courses: 3 credits
   - ANS 201 Animal Products
   - FSC 211 Principles of Food Science

2. The following course: 3 credits
   - FSC 325 Food Processing: Unit Operations

3. Two of the following courses (9 credits): 5 or 6 credits
   - FSC 342 Food Safety and Hazard Analysis Critical Control Point Program
   - FSC 420 Quality Assurance
   - FSC 421 Food Laws and Regulations

4. Two of the following courses: 6 credits
   - CEM 482 Science and Technology of Wine Production
   - CHE 483 Brewing and Distilled Beverage Technology
   - FSC 430 Food Processing: Fruits and Vegetables
   - FSC 431 Food Processing: Cereals
   - FSC 432 Food Processing: Dairy Foods
   - FSC 433 Food Processing: Muscle Foods
   - FSC 481 Fermented Beverages

GRADUATE STUDY

The department offers Master of Science and Doctor of Philosophy degree programs with majors in food science and a Doctor of Philosophy degree program with a major in food science—environmental toxicology. Those programs are described below. The department also offers Master of Science and Doctor of Philosophy degree programs with majors in human nutrition and a Doctor of Philosophy degree program with a major in human nutrition—environmental toxicology. Those programs are also described below. In addition, the department offers programs for postdoctoral research.

Each graduate program in the Department of Food Science and Human Nutrition is designed to prepare the student to become a specialist in food science or human nutrition. Programs of study and research are flexible and are designed to meet the needs and objectives of individual students. Emphasis is placed on a sound educational program to develop a high degree of professional competence in a specific program area. Attendance and participation at seminars and participation in the teaching programs are designed to broaden the student's background for future careers.

Students who are enrolled in Master of Science degree programs in the Department of Food Science and Human Nutrition may elect a Specialization in Environmental Toxicology. For additional information, refer to the statement on the specialization in the College of Veterinary Medicine section of this catalog.

Students who are enrolled in Master of Science and Doctor of Philosophy degree programs in the Department of Food Science and Human Nutrition may elect specializations in Infancy and Early Childhood. For additional information, refer to the statement on Interdepartmental Graduate Specializations in Infancy and Early Childhood in the College of Social Science section of this catalog.

FOOD SCIENCE

In addition to meeting the requirements of the university and of the College of Agriculture and Natural Resources, students who are admitted to the master's and doctoral degree programs in food science must meet the requirements specified below. A student who is admitted to a graduate program in food science is expected to have general, quantitative, and organic chemistry and biochemistry. In addition, preparation for graduate work should include courses in the biological and agricultural sciences, mathematics, physics, nutrition, engineering, or economics. A student with insufficient academic background may be required to complete collateral courses in addition to the courses that are required for the degree.

For the master's degree in food science, the student may elect either Plan A (with thesis) or Plan B (without thesis). A total of 30 credits is required for the degree under Plan A or Plan B.

FOOD SCIENCE—ENVIRONMENTAL TOXICOLOGY

Doctor of Philosophy

For information about the Doctor of Philosophy degree program in food science—environmental toxicology, refer to the statement on Doctoral Program in Environmental and Integrative Toxicological Sciences in the Graduate Education section of this catalog.

HUMAN NUTRITION

Master of Science

The Master of Science degree in Human Nutrition includes research, course work in advanced nutrition, statistics, seminars, and appropriate selections from one or more of the following areas: biochemistry, physiology, anthropology, immunology, epidemiology, psychology, or sociology. Students in this program must meet the requirements of the university and of the College of Agriculture and Natural Resources.

Admission

To be considered for admission to the Master of Science degree program in Human Nutrition an applicant must:

1. have completed a bachelor's degree with courses in nutrition, including upper-level macro-and micronutrients, com-
Collateral course work may be required to overcome deficiencies, but will not count towards the degree requirements.

Requirements for the Doctor of Philosophy Degree in Human Nutrition

The student must:
1. Complete all of the following courses (11 credits):
   - HNF 820 Advanced Biochemical Nutrition ........................................ 3
   - HNF 821 Advanced Vitamins and Minerals ........................................... 3
   - HNF 823 Research Methods in Human Nutrition ..................................... 3
   - HNF 892 Nutrition Seminar ............................................................... 2
2. One of the following courses (3 credits):
   - HNF 840 Human Nutrition and Chronic Diseases ................................... 3
   - HNF 891 Topics in Human Nutrition .................................................... 3
3. One of the following courses (1 or 3 credits):
   - HNF 824 Nutrition Policies and Programs ........................................... 1
     Alternative public health or community nutrition course approved by guidance committee ........................................ 3
4. A 3-credit graduate-level statistics course chosen in consultation with advisor and guidance committee.
5. Complete a mentored teaching experience through one the following courses (1 or 2 credits):
   - HNF 894 Human Nutrition Practicum ..................................................... 1
6. Complete additional course work approved selected in consultation with the student’s guidance committee based on the student’s prior academic background in relation to the selected area of study and research.
8. Successfully complete a proposal defense and defend the oral and written dissertation.

HUMAN NUTRITION—ENVIRONMENTAL TOXICOLOGY

Doctor of Philosophy

For information about the Doctor of Philosophy degree program in human nutrition—environmental toxicology, refer to the statement on Doctoral Program in Environmental and Integrative Toxicological Sciences in the Graduate Education section of this catalog.

DEPARTMENT of FORESTRY

Richard K. Kobe, Chairperson

Forestry students discover their central role in sustaining forests and the ecosystem services that forests provide, including conservation of biodiversity, wood, clean water, and global climate stabilization. MSU forestry students learn to be leaders through multi-disciplinary course work, field studies, cutting-edge technology and mentorship from faculty.

The Bachelor of Science degree program in Forestry educates forestry science professionals. It integrates ecology, biology, economics and social science to help students solve some of the world’s most pressing natural resource, environmental and energy issues. Students have the opportunity to minor in Urban and Community Forestry. Students who are not majoring in Forestry can minor in Forestry or Forestry Field Applications.

Our graduate programs include a research-intensive or a professional track for individuals pursuing a wide range of careers in academia, management, public agencies, non-government organizations or the private sector. Students also have the option to obtain a Graduate Certificate in Spatial Ecology or in Forest Carbon Science, Policy and Management.
UNDERGRADUATE PROGRAMS

Undergraduates study Forestry as a global, interdisciplinary science. Students learn about forest ecosystems and the myriad of services they provide, as well as how to resolve forest-centered environmental and natural resource issues. Students develop the knowledge and tools needed to restore and enhance the capacity of forests to sustain health and prosperity of humans and other organisms.

The Bachelor of Science degree in Forestry emphasizes innovation and is the longest-standing and among the leading programs in the United States. The Bachelor of Science degree is accredited by the Society of American Foresters. The Department of Forestry maintains strong connections to an accomplished alumni base to provide current students with opportunities for internships and employment in Michigan and throughout the world.

FORESTRY

“How can forest ecosystems and all their recognized values be sustained in the modern world?” This is a fundamental question for the 21st century, as forest ecosystems are facing grave threats all over the world, including large-scale deforestation, forest degradation, invasive pests and pathogens, and global climate change. In the face of these threats, forestry professionals have a great responsibility and opportunity to maintain, restore and enhance the sustainability of forest ecosystems.

Students enrolled in the Bachelor of Science Degree in Forestry program develop an in-depth understanding of the natural and social sciences in order to manage forest ecosystems. Through hands-on laboratory experiences and field studies, students learn how to manage forests for a wide range of goals and acquire the skills to evaluate and ensure the ecological, economic, and social sustainability of forests. They place emphasis on development of analytical and communications skills necessary to create a positive exchange of ideas between forestry professionals and non-technical audiences. Students who graduate from this program will possess the professional training to enable them to contribute significantly to resolution of forest-centered environmental and resource problems.

Forest professionals are employed in a variety of settings. Many choose careers with public land management agencies, such as the United States Department of Agriculture Forest Service, the National Park Service, the Fish and Wildlife Service, the Soil Conservation Service, or state departments of natural resources. Conservation organizations, such as the Wilderness Society and the Nature Conservancy, also hire forestry professionals. Forestry professionals are in high demand in the forest products industry, including in sustainable production of environmentally responsible wood products and management of bioenergy plantations. Increasingly, forestry expertise is required to combat climate change through work on forest-based climate mitigation projects, often in international settings. Forest professionals work with the Peace Corps and other international development organizations in reforestation projects. There are also rewarding careers for forestry professionals in urban and suburban settings, with municipal forestry organizations or with private tree and shrub-care companies in promoting green, sustainable, and livable environments. The high quality education afforded by the bachelor’s degree provides the knowledge and skills needed for the career opportunities listed above, and many others, as well as the rigorous background needed for graduate studies in forestry and related fields, including ecology, soil science, environmental science, geography, economics, social science, public policy, and law.

Requirements for the Bachelor of Science Degree in Forestry

1. The University requirements for bachelor’s degrees as described in the Undergraduate Education section of this catalog: 120 credits, including general elective credits, are required for the Bachelor of Science degree in Forestry.

2. Students who are enrolled in the Forestry major leading to the Bachelor of Science degree in Forestry may complete an alternative track to the Integrative Studies in Biological and Physical Sciences that consists of the following courses: Plant Biology 105 and 106 combined, and Chemistry 141 and 161.

3. The completion of Chemistry 141 and Plant Biology 106 satisfies the laboratory requirement. Plant Biology 105 and 106 combined, and Chemistry 141 and 161 may be counted toward both the alternative track and the requirements for the major referenced in item 3. below.

4. The completion of the College of Agriculture and Natural Resources mathematics requirement may also satisfy the University mathematics requirement.

5. The requirements of the College of Agriculture and Natural Resources for the Bachelor of Science degree.

Certain courses referenced in requirement 3. below may be counted toward College requirements as appropriate. The completion of Mathematics 124 or 132 satisfies the College’s mathematics requirement.

6. The following requirements for the major:

MINOR IN FORESTRY

The Minor in Forestry is designed to serve students in other fields who desire additional training related to understanding of the nature of trees and forests and social-biological aspects of managing forest ecosystems. The minor is available to students who are enrolled in bachelor’s degree programs at Michigan State University other than the Bachelor of Science Degree in Forestry.

With the approval of the department and college that administers the student’s degree program, courses that are used to satisfy the requirements for the minor may also be used to satisfy the requirements for the bachelor’s degree.

Students who are interested in enrolling should contact an undergraduate advisor in the Department of Forestry.
Students must complete the following requirements (16 to 19 credits):
1. All of the following courses (8 credits):
   - FOR 204 Forest Vegetation ........................................... 3
   - FOR 222 Forestry Field Methods .................................... 2
   - FOR 404 Forest Ecology .............................................. 3
   - FOR 404L Forest Ecology Laboratory .............................. 1
   - FOR 406 Applied Forest Ecology: Silviculture ................... 3

   AND

   - FOR 406L Applied Forest Ecology: Silviculture Laboratory .... 1
   - FOR 412 Wildland Fire ............................................... 2

2. One of the following courses (3 credits):
   - FOR 330 Human Dimensions of Forests ............................ 3
   - FOR 414 Renewable Wood Products ................................ 3
   - FOR 462 Forest Resource Economics and Management .......... 4
   - FOR 466 Natural Resource Policy ................................... 3

3. One of the following courses covering social aspects of Forestry (3 or 4 credits):
   - FOR 405 Forest Ecosystem Services .................................. 3
   - FOR 414 Renewable Wood Products ................................ 3
   - FOR 462 Forest Resource Economics and Management .......... 4
   - FOR 466 Natural Resource Policy ................................... 3

4. One of the following courses covering Biological aspects of Forestry (2 to 4 credits):
   - FOR 404 Forest Ecology .............................................. 3
   - FOR 404L Forest Ecology Laboratory .............................. 1
   - FOR 406 Applied Forest Ecology: Silviculture ................... 3
   - FOR 406L Applied Forest Ecology: Silviculture Laboratory .... 1

5. One of the following courses covering biological aspects of Forestry (2 credits):
   - FOR 420 Forestry Field Studies .................................... 3

MINOR IN URBAN AND COMMUNITY FORESTRY

The Minor in Urban and Community Forestry is designed to provide students with an understanding of the social, biological, and administrative aspects of managing urban and community forests. The minor serves students interested in careers with public agencies, the private sector, and non-profit organizations. The minor is administered by the Department of Forestry and is available as an elective to students who are enrolled in bachelor's degree programs at Michigan State University.

With the approval of the department and college that administer the student’s degree program, courses that are used to satisfy the requirements for the minor may also be used to satisfy the requirements for the bachelor's degree.

Students who are interested in enrolling should contact an undergraduate advisor in the Department of Forestry.

Students who are enrolled in Master of Science and Doctor of Philosophy degree programs in the Department of Forestry may elect specializations in resource economics. For additional information, refer to the statement on Interdepartmental Graduate Specializations in Resource Economics.

FORESTRY

Master of Science

The Master of Science degree may be earned either in a professional program in forest management or administration or in a forestry specialty program.

The professional program in forest management or administration is viewed as an extension of general forestry, and therefore, requires a bachelor's degree with a major in forestry as a prerequisite or a collateral program of study in undergraduate forestry courses. There is, however, considerable flexibility in the program to meet individual student needs and objectives.

A forestry specialty program, on the other hand, is as readily open to nonforesters as to foresters. It includes some forestry courses but draws mainly from other departments in the university to provide courses appropriate to forestry specialties: forest biometrics, tree physiology, forest soils, forest recreation, forest management, forest business management, forest economics, forest influences, forest ecology, forest genetics, forest entomology, forest hydrology, and wood science and technology.
Qualified students with undergraduate degrees in forestry can usually complete the requirements for the Master of Science degree in forestry in one year. The student must meet the requirements of the university and of the College of Agriculture and Natural Resources. The student must also complete additional requirements for the program as specified by the student's academic advisor. The student may elect either Plan A (with thesis) or Plan B (without thesis). A total of 30 credits is required for the degree under Plan A or Plan B.

**Doctor of Philosophy**

The Doctor of Philosophy degree program with a major in forestry is open to nonforesters as well as foresters. Forestry specialties are studied in depth.

Qualified students with undergraduate degrees in forestry can usually complete the requirements for the Doctor of Philosophy degree in forestry in six semesters. The student must meet the requirements of the university and of the College of Agriculture and Natural Resources. The student must also complete additional requirements for the program as specified by the student's academic advisor.

Program requirements are highly variable, depending on the student's background of study and experience. In all cases, the student must complete an acceptable dissertation incorporating the results of original research.

**FORESTRY—ENVIRONMENTAL TOXICOLOGY**

**Doctor of Philosophy**

For information about the Doctor of Philosophy degree program in forestry—environmental toxicology, refer to the statement on Doctoral Program in Environmental and Integrative Toxicological Sciences in the Graduate Education section of this catalog.

**PLANT BREEDING, GENETICS and BIO TECHNOLOGY—FORESTRY**

The Department of Forestry offers Master of Science and Doctor of Philosophy degree programs in plant breeding, genetics and biotechnology—forestry. Students meet the requirements for admission and the requirements for the degree as specified in the statement on Interdepartmental Graduate Programs in Plant Breeding, Genetics and Biotechnology: Additional information about graduate study may be obtained by writing to the Department of Forestry.

**GRADUATE CERTIFICATE IN FOREST CARBON SCIENCE, POLICY AND MANAGEMENT**

The Graduate Certificate in Forest Carbon Science, Policy and Management provides students with interdisciplinary training necessary to plan, manage, monitor and evaluate climate change mitigation projects that seek to retain or sequester carbon in forest ecosystems. Students will gain specific expertise needed internationally to participate in market-based, climate change mitigation activities such as the United Nations Collaborative Programme on Reducing Emissions from Deforestation and Forest Degradation (REDD+). The graduate certificate is available online only.

**Admission**

To be considered for admission into the Graduate Certificate in Forest Carbon Science, Policy and Management, applicants must have completed a bachelor’s degree in forestry, natural resources, environmental sciences, or a related field. For additional information, refer to the Admission section in the Graduate Education section of this catalog.

**GRADUATE CERTIFICATE IN SPATIAL ECOLOGY**

The Graduate Certificate in Spatial Ecology provides interdisciplinary training necessary to develop inference about ecological phenomena using appropriate spatial theory, statistics, modeling approaches, and data management tools. Students gain the necessary skills to address tomorrow’s complex ecological challenges.

The graduate certificate is available as an elective to students who are enrolled in master’s or doctoral degree programs at Michigan State University.

**Requirements for the Graduate Certificate in Spatial Ecology**

1. The following course (4 credits):
   GEO 866 Spatial Data ........................................ 4
2. One of the following courses (3 credits):
   FOR 870 Spatial Ecology .................................. 3
   FW 840 Landscape Ecology ................................. 3
3. One of the following courses (3 or 4 credits):
   CSS 921 Geostatistics ....................................... 3
   FOR 867 Hierarchical Modeling and Computing for Spatio-temporal Environmental Data 3
   FOR 870 Spatial Ecology .................................. 3
   FW 840 Landscape Ecology ................................. 3
   GEO 885 Advanced Quantitative Methods in Geography ................................. 4
   GEO 886 Geosimulation ..................................... 3

Forestry 870 and Fisheries and Wildlife 840 may not be used to fulfill this requirement if used to fulfill requirement 2. above.

**DEPARTMENT of HORTICULTURE**

**William Vance Baird, Chairperson**

The Department of Horticulture at Michigan State University was established in 1883 as the first university horticulture department in the United States, and remains a leader in the field and the industry to this day. Horticulture is a complex and diversified, yet fully integrated discipline that encompasses the biological, molecular and physical sciences, business management, and the arts. Horticulturists work to improve the production of nutritious, high-quality and safe food, advance the development and use of new specialty crops, enhance human health and well-being, and positively impact the natural and built environments. As such, horticultural crops (fruits, vegetables, and landscape ornamentals) and their utilization establish the important connection between plant scientists, growers, consumers, society and the environment.
For students seeking a bachelor's degree, we offer concentrations in horticultural science; sustainable and organic horticulture; and landscape design, construction and management. Additionally, multiple two-year certificate programs are offered both on-campus in East Lansing, as well as around the state in partnership with various community colleges. The two-year programs offer a fast track for students interested in the landscape, nursery, greenhouse, fruit, vegetable, and organic horticulture industries. All of our programs require a professional internship experience with an industry or academic employer, typically during the summer months. Our curriculum integrates theoretical, practical and hands-on experiences to help students develop problem-solving skills in science, technology, production, design and management.

Students are extensively involved in professional and social activities beyond the classroom and design studio: gaining experience in research laboratories; assisting in field-based projects; managing the student Horticulture Association spring show and plant sale; working with the Ecological Food and Farm Stewardship Club; and training for and participating in academic and field events associated with the National Collegiate Landscape Competition.

Our facilities include classroom and laboratories that are housed in the Plant and Soil Sciences Building, the nationally recognized Horticultural Demonstration Gardens, 4-H Children’s Gardens, the Clarence E. Lewis Arboretum, and the Horticulture Teaching and Research Center (HTRC). The Student Organic Farm is located at the HTFC where students gain practical, non-credit experiences and produce food for a Community Supported Agriculture program as well as MSU’s residential housing service.

UNDERGRADUATE PROGRAM

Horticulture is the science and art concerned with the culture, production, marketing, and utilization of high-value intensively cultivated plants. Horticultural crops are diverse, including annual and perennial species, food and ornamental plants, and plants grown outdoors and in controlled environments. Horticultural foods and food products, flowers, and landscapes sustain and enrich our lives. The primary horticulture discipline areas include floriculture, landscape horticulture, olericulture (vegetables), and pomology (fruits).

Graduates with a major in horticulture may enter a broad range of challenging and rewarding professional careers in production, management, marketing, education, consulting and service industries, or research. In addition, graduates frequently become entrepreneurs or obtain employment in horticultural business enterprises (e.g., commercial production operations, landscape design/build and maintenance companies, nurseries, retail flower shops, or fruit and vegetable markets). Graduates may also pursue careers in nontraditional areas that require a knowledge of horticulture such as secondary education, the publication industry, or international development.

The study of horticulture is highly integrative combining scientific and technical knowledge, and problem-solving skills for application in various professions related to horticulture. Students in horticulture combine diverse fundamental disciplines in physical science (chemistry), biological sciences (botany, genetics, plant physiology, entomology, and plant pathology), environmental science (soil science), with horticultural crop production, and business (economics, management, and marketing). Communication and computer skills are also cultivated within the horticulture curriculum. Students complete one of three concentrations: Horticultural Science, Sustainable and Organic Horticulture, or Horticulture Landscape Design, Construction, and Management. In all concentrations, students obtain hands-on experiences through laboratory exercises in the greenhouses, in the horticulture gardens, or at the farms. Field trips expose students to successful horticultural businesses, industries, and support services within Michigan. Students may gain professional work experience through internships, independent study, and part-time employment in research and extension programs within the Department of Horticulture.

Requirements for the Bachelor of Science Degree in Horticulture

1. The University requirement for bachelor’s degrees as described in the Undergraduate Education section of this catalog; 120 credits, including general elective credits, are required for the Bachelor of Science degree in Horticulture. The University’s Tier II writing requirement for the Horticulture major is met by completing Horticulture 404. That course is referenced in item 3. a. below.

Students who are enrolled in the Horticulture major leading to the Bachelor of Science degree in the Department of Horticulture may complete an alternative track to Integrative Studies in Biological and Physical Sciences that consists of the following courses: Plant Biology 105 and 106 and Chemistry 141, 143, and 161. The completion of Plant Biology 105 and Chemistry 161 satisfies the laboratory requirement. Plant Biology 105 and 106 and Chemistry 141, 143, and 161 may be counted toward both the alternative track and the requirements for the major referenced in item 3. below.

The completion of Mathematics 116 or its equivalent in fulfillment of the College of Agriculture and Natural Resources mathematics requirement which also may satisfy the University mathematics requirement.

2. The requirements of the College of Agriculture and Natural Resources for the Bachelor of Science degree. Certain courses referenced in requirement 3. below may be counted toward College requirements as appropriate.

3. The following requirements for the major:

Horticultural Science (33 credits):

(1) All of the following courses (12 credits):

<table>

MINOR IN HORTICULTURE

The Minor in Horticulture, which is administered by the Department of Horticulture, is designed to provide an opportunity for students to gain a fundamental understanding of the science of horticulture and tailor their studies to food production, greenhouse and nursery crops, landscape design and management, or plant breeding and genetics.

The minor is available as an elective to students who are enrolled in bachelor's degree programs at Michigan State University. With the approval of the department and college that administers the student's degree program, courses that are used to satisfy the minor may also be used to satisfy the requirements for the bachelor's degree.

Students who plan to complete the requirements for the minor should consult an undergraduate advisor in Horticulture.

Requirements for the Minor in Horticulture

Complete 17 credits from the following:

1. Both of the following courses (5 credits):
   - HRT 203 Principles of Horticulture
   - HRT 204 Plant Propagation

2. Complete 12 credits from the following:
   - HRT 205 Plant Mineral Nutrition
   - HRT 207 Training and Pruning Plants
   - HRT 211 Landscape Plants I
   - HRT 212 Landscape Plants II
   - HRT 213 Landscape Maintenance
   - HRT 213L Landscape Maintenance Field Laboratory
   - HRT 218 Irrigation Systems for Horticulture
   - HRT 219 Landscape Computer Aided Design

MINOR IN PLANT, ANIMAL AND MICROBIAL BIOTECHNOLOGY

The Minor in Plant, Animal and Microbial Biotechnology is available as an elective to students who are enrolled in Bachelor of Science degree programs with majors in animal science, biosystems engineering, fisheries and wildlife, food science, forestry, horticulture, and plant, soil and microbial sciences. The minor is administered by the Department of Horticulture.

The minor provides the opportunity for students who are enrolled in biological science-related undergraduate programs to become familiar with the concepts, techniques, and issues related to modern biotechnology. The minor is designed for students who may be planning to pursue graduate study in biotechnology-related disciplines or who may be interested in careers with corporations or agencies for which a basic familiarity with biotechnology is a prerequisite.

With the approval of the department and college that administers the student's degree program, courses that are used to satisfy the requirements for the minor may also be used to satisfy the requirements for the bachelor's degree.

Requirements for the Minor in Plant, Animal and Microbial Biotechnology

The student must complete:

1. All of the following courses (8 credits):
   - BM 401 Comprehensive Biochemistry
   - HRT 461 Seminar in Plant, Animal and Microbial Biotechnology
   - HRT 486 Biotechnology in Agriculture: Applications and Ethical Issues

2. One of the following courses (3 or 4 credits):
   - ANS 314 Genetic Improvement of Domestic Animals
   - CSS 350 Introduction to Plant Genetics
   - BIB 401 Fundamental Genetics
   - BM 360 Microbial Systems Engineering
   - CSS 451 Biotechnology Applications for Plant Breeding and Genetics
   - MMG 445 Microbial Biotechnology (W)

3. One of the following courses (3 credits):
   - ANS 425 Animal Biotechnology
   - BE 360 Microbial Systems Engineering
   - CSS 451 Biotechnology Applications for Plant Breeding and Genetics

4. One of the following courses (1 credit):
   - ANS 490 Independent Study
   - BE 490 Independent Study
   - CSS 490 Independent Study
   - HRT 492 Undergraduate Research

GRADUATE STUDY

The Department of Horticulture offers graduate study leading to the M.S. and Ph.D. degrees in Horticulture. In addition, students may work with Horticulture faculty to obtain M.S. and/or Ph.D. degrees in several interdepartmental graduate programs including plant breeding, genetics and biotechnology, genetics, cell and...
molecular biology, molecular plant physiology, and ecology and evolutionary biology.

Faculty and students in MSU-Horticulture engage in scholarly research, teaching and outreach programs that are recognized nationally and internationally by our peer institutions and horticultural industries. Furthermore, our faculty and graduate students comprise an inclusive community of diverse backgrounds, cultures and experiences from across the U.S. and around the world. The Horticulture graduate curriculum is flexible and can be tailored specifically to individual backgrounds, educational experience, and career goals. Students can participate in an array of interdisciplinary studies in such diverse areas as plant breeding, genetics, genomics, molecular biology, bioinformatics, modeling, biochemistry, development, physiology and environmental response, sustainable and organic cropping systems, integration of plants with the human environment and marketing of horticultural/specialty crops. This integrated educational and research approach fosters new discoveries in the plant sciences and technological innovations in the sustainable production of food, ornamental and landscape crops.

Numerous fellowships and grant-funded assistantships are available on a career interest and competitive basis. Contact the MSU-Horticulture Graduate Programs Office (www.hort/msu.edu) or faculty members directly to explore the potential to earn an advanced degree working in their research programs.

Students who are enrolled in Master of Science degree programs in the Department of Horticulture may elect a Specialization in Food Safety. For additional information, refer to the statement on the specialization in the College of Veterinary Medicine section of this catalog.

**HORTICULTURE**

**Master of Science**

In addition to meeting the requirements of the university and of the College of Agriculture and Natural Resources, students must meet the requirements specified below.

**Admission**

Students must have completed a Bachelor of Science degree or its equivalent in a plant related field, a basic course in horticulture, 15 credits in plant or soil sciences including plant physiology, and one course each in trigonometry, physics, and organic chemistry. Exceptions must be approved by the departmental Graduate Affairs Committee. Applicants lacking the necessary undergraduate background will be required to complete either collateral courses in addition to the requirements for the master's degree or a second Bachelor of Science degree with a major acceptable to the department.

**Requirements for the Master of Science Degree in Horticulture**

The student may elect either Plan A (with thesis) or Plan B (without thesis). A total of 30 credits is required for the degree under Plan A or Plan B.

The program of study for the Master of Science degree will include courses from departments other than the Department of Horticulture, but it should include at least 3 credits in the 800 series in horticulture in addition to research. For Plan A, at least 6 but not more than 10 credits of master's thesis research (Horticulture 899) is required. For Plan B, at least 2 but not more than 5 credits of research (Horticulture 898) is required. All programs of study are subject to departmental review.

A final oral examination on courses and research pursued during the program will be scheduled at the end of the student's final semester of enrollment.

**Doctor of Philosophy**

In addition to meeting the requirements of the university and of the College of Agriculture and Natural Resources, students must meet the requirements specified below.

**Requirements for the Doctor of Philosophy Degree in Horticulture**

An oral qualifying examination may be conducted by the guidance committee shortly after the student begins advanced graduate study to determine his or her qualifications and to provide a basis for developing the program of study.

At least 6 credits in the 800 series in horticulture are recommended. Three of the six credits may have been completed as part of master's degree requirements.

**PLANT BREEDING, GENETICS and BIOTECHNOLOGY—HORTICULTURE**

The Department of Horticulture offers Master of Science and Doctor of Philosophy degree programs in plant breeding, genetics and biotechnology—horticulture. Students meet the requirements for admission and the requirements both for Horticulture, as specified above, and for Plant Breeding, Genetics and Biotechnology, as specified in the statement on Interdepartmental Graduate Programs in Plant Breeding, Genetics and Biotechnology.

**SCHOOL of PACKAGING**

**Susan E. Selke, Director**

**UNDERGRADUATE PROGRAMS**

The School of Packaging offers a program of instruction leading to the Bachelor of Science degree. The program combines basic principles of physics, chemistry, mathematics, and materials science with specialized courses to prepare students for rewarding careers in industry. Career opportunities are plentiful since some form of packaging is involved in the production and movement to market of nearly every item of consumption in today's economy. In addition to careers in companies that use packaging, attractive opportunities are also available in the package supply industries. Package supplier industries include companies that print and convert paper and flexible plastic materials as well as manufacturers of such diverse items as bottles, cans, folding cartons, corrugated boxes, drums, wooden containers, pallets, pails, tubes, vials, and jars. Packaging impacts most functions in manufacturing firms so graduates may work in package development, production, quality control, research, sales, purchasing, marketing, testing, distribution, or technical services.

In its flexibility, the program allows students to leverage their personal skills and interests and to make individualized choices. Two concentrations are offered: Packaging Science and Packaging Value Chain Management. The Packaging Science concentration focuses on the technical needs of packaging while the Packaging Value Chain Management concentration focuses on...
AGRICULTURE AND NATURAL RESOURCES
School of Packaging

the role of packaging in the value chain and the need to understand economics and business functions. Elective courses provide focused study in specific areas of the packaging industry.

Admission as a Junior

Enrollments in the School of Packaging are limited. To be considered for admission to the major, the student must have:

1. Completed at least 56 credits.
2. Completed the following courses with a minimum grade of 2.0 in each course:
   a. Chemistry 141.
   b. Mathematics 133.
   c. Physics 231.

The student’s cumulative grade-point average for all courses completed is considered in the admission decision.

For additional information about admissions criteria and procedures, students should contact the School of Packaging.

Requirements for the Bachelor of Science Degree in Packaging

1. The University requirements for bachelor’s degrees as described in the Undergraduate Education section of this catalog; 120 credits, including general elective credits, are required for the Bachelor of Science degree in Packaging.

   The University’s Tier II writing requirement for the Packaging major is met by completing Packaging 486. That course is referenced in item 3. below.

   Students who are enrolled in the Packaging major leading to the Bachelor of Science degree in the School of Packaging may complete an alternative track to Integrative Studies in Biological and Physical Sciences that consists of the following courses: Chemistry 141, 143 and 161; or Food Science 342 or Microbiology and Molecular Genetics 201. The completion of Chemistry 143 and 161 satisfies the laboratory requirement. Chemistry 141, 143 and 161; Food Science 342 or Microbiology and Molecular Genetics 201 may be counted toward both the alternative track and the requirements for the major referenced in item 3. below.

2. The requirements of the College of Agriculture and Natural Resources for the Bachelor of Science degree in Agriculture and Natural Resources mathematics requirement may also satisfy the University mathematics requirement.

   a. All of the following courses: ........................................ 57

   CEM 141 General Chemistry ........................................... 4
   CEM 143 General Chemistry ........................................... 4
   CEM 161 Chemistry Laboratory I .................................... 1
   MTH 132 Calculus I .................................................... 3
   MTH 132 Calculus II .................................................... 4
   PKG 101 Principles of Packaging .................................. 3
   PKG 102 Introductory Packaging Seminar ..................... 2
   PKG 221 Packaging with Glass and Metal ..................... 2
   PKG 315 Packaging Decision Systems ......................... 3
   PKG 322 Packaging with Paper and Paperboard ............ 4
   PKG 323 Packaging with Plastics ................................ 4
   PKG 410 Distribution Packaging Dynamics .................... 4
   PKG 411 Package Development Technology ................... 3
   PKG 432 Packaging Processes .................................... 4
   PKG 485 Packaging Development ................................ 3
   PKG 486 Packaging Senior Capstone (W) ...................... 3
   PHY 231 Introductory Physics I .................................... 3
   PHY 232 Introductory Physics II ................................... 3
   b. One of the following courses: .................................... 3

   FSC 342 Food Safety and Hazard Analysis Critical........... 3
   MMG 201 Fundamentals of Microbiology ....................... 3

   A course used to fulfill this requirement may not be used to fulfill a requirement in the Packaging Science concentration.

   c. One of the following courses: .................................... 3 or 4

   STT 201 Statistical Methods ...................................... 3
   STT 201 Statistical Methods ...................................... 3
   STT 315 Introduction to Probability and Statistics for Business ..................................................... 3
   STT 351 Probability and Statistics for Engineering ......... 3

   d. One of the following courses: .................................... 3

   MKT 327 Introduction to Marketing ................................
   SCM 303 Introduction to Supply Chain Management ........

   A course used to fulfill this requirement may not be used to fulfill a requirement in the Packaging Value Chain Management concentration.

   e. One of the following concentrations (18 credits):

      Packaging Science

      1. One of the following courses (3 or 4 credits):

         PKG 452 Medical Packaging .................................... 4
         PKG 455 Food Packaging ....................................... 3

   2. Completion of 6 credits of electives in packaging. Enrollment in a packaging internship completed under PKG 493 (up to 3 credits) and enrollment in a packaging overseas study program completed under PKG 491 (up to 3 credits) may be used towards this requirement with advisor approval.

   3. Completion of 9 credits of electives from the following with at least one course at the 300-level or above:

      BMB 210 Introduction to Biochemistry ......................... 4
      CE 221 Statics ...................................................... 3
      FSC 211 Principles of Food Science ............................. 3
      FSC 325 Food Processing; Unit Operations .................. 3
      FSC 342 Food Safety and Hazard Analysis Critical ....... 3
      Control Point Program .......................................... 3
      FSC 401 Food Chemistry .......................................... 3
      FSC 421 Food Laws and Regulations ........................... 3
      FSC 440 Food Microbiology ..................................... 3
      MMG 201 Fundamental of Microbiology ....................... 3
      MMG 301 Introductory Microbiology ........................... 3
      MMG 302 Introductory for General and Allied Health  .... 3
      Microbiology ...................................................... 3

   For additional information about admissions criteria and procedures, students should contact the School of Packaging.

Graduate Study

The School of Packaging offers graduate programs leading to the degrees of Master of Science and Doctor of Philosophy in packaging. Facilities and instruments are available for advanced study and research areas such as product and/or package damage in the physical distribution environment, barrier characteristics of packaging systems and materials, quality preservation and storage stability of packaged products, mechanical properties of packaging materials and systems, medical packaging, automatic identification, logistics, environmental impact and recycling of packaging materials, human factors in packaging, and packaging systems development and optimization. Programs of study and research are flexible and are designed to meet the needs of individual students.

Students who are enrolled in the Master of Science degree programs in the School of Packaging may elect a Graduate Specialization in Food Safety. For additional information, refer to the statement on the specialization in the College of Veterinary Medicine section of this catalog.

Master of Science

Emphasis is placed upon a broad education in packaging that includes an area of study referenced above. Student participation in seminars and in the teaching program, where appropriate, is designed to broaden the student’s background for future career activities.

In addition to meeting the requirements of the university and of the College of Agriculture and Natural Resources, students must meet the requirements specified below.
Admission
Entering graduate students are expected to have a bachelor's degree in packaging or a related undergraduate field. Students lacking the equivalent of a bachelor's degree in packaging may be admitted provisionally and be required to complete collateral courses to make up any deficiencies. These collateral courses will not count toward degree requirements.

Requirements for the Master of Science Degree in Packaging
The master's degree program in packaging is available under either Plan A (with thesis) or Plan B (without thesis). A total of 30 credits is required for the degree under Plan A or Plan B. The student's program of study must be approved by either the student's guidance committee (Plan A) or the student's major professor (Plan B).

Requirements for Both Plan A and Plan B
The student must:
1. Complete 15 credits in Packaging courses at the 400-level or above. More than half of the 30 credits required for the degree must be at the 800-level or above.
2. Demonstrate an understanding of basic statistics.

Additional Requirements for Plan A
1. Packaging 825 and 860.
2. Packaging 805 or 815.
3. An additional 3 credits in 800-900 level Packaging courses excluding Packaging 888, 890, and 899.
4. At least six, but not more than eight, credits of Packaging 899.

Additional Requirements for Plan B
1. Packaging 805, 815, and 825.
2. An additional 6 credits in 800-900 level Packaging courses excluding Packaging 888, 890, and 899.

Doctor of Philosophy
In addition to meeting the requirements of the university and of the College of Agriculture and Natural Resources, the student must meet the requirements specified below.

Admission
To be considered for admission to the Doctor of Philosophy degree program in packaging, an applicant must submit scores on the Graduate Record Examination (GRE) General Test.
To be admitted to the Doctor of Philosophy degree program in packaging on regular status, a student must have:
1. Completed a master's degree program in packaging, or in a related science or engineering area, for which a thesis was required.
2. A grade–point average of at least 3.40 for the master's degree program.
3. Acceptable scores on the GRE General Test.
Provisional admission may be granted to an applicant who does not meet the above requirements but shows outstanding potential.

Guidance Committee
At least three members of the student's guidance committee must be faculty members in the School of Packaging, and at least one member must be a faculty member from outside the school.

Requirements for the Doctor of Philosophy Degree in Packaging
The student must:

1. Complete both of the following courses:
   - PKG 860 Research Methods
   - PKG 895 Analytical Solutions to Packaging

2. Complete additional 800–900 level courses related to the student's dissertation research as specified by the student's guidance committee.
3. Pass both a written and an oral comprehensive examination.
4. Complete a dissertation in one of the following areas of packaging: material science applications in packaging, food packaging, healthcare packaging, mass transport applications, dynamics and physical distribution aspects or human factors in packaging.

SCHOOL of PLANNING, DESIGN and CONSTRUCTION

Ming-Han Li, Director
The School of Planning, Design, and Construction is jointly administered by the College of Agriculture and Natural Resources and the College of Social Science. The College of Agriculture and Natural Resources is the primary administrative unit. The school includes the academic programs that affect the various components of the built environment – construction management, landscape architecture, interior design, and urban and regional planning. Its educational discovery and engagement programs enhance the quality of life in a sustainable manner. The school serves the needs of students, the public, and the built environment via its undergraduate and graduate programs, research, conferences, and workshops offered through various outreach programs.
The school and its programs advance the university's bolder by design mission by creating, disseminating and applying knowledge to improve the quality of life in urban, regional and international communities. It accomplishes this mission, in part, by implementing, evaluating and disseminating innovative approaches developed through multidisciplinary research and collaborative community partnerships. The school provides a collaborative learning environment for faculty and students at Michigan State University to participate in a scholarship of engagement in generating and applying knowledge to address the contemporary challenges of communities.
The school also offers a dual degree program which provides an opportunity for students who are currently accepted into the Bachelor of Landscape Architecture program to enroll in graduate courses required in the Master of Arts Degree in Environmental Design while completing the last year and a half (three semesters) of their bachelor's degree program. Students interested in pursuing the dual degree of Bachelor of Landscape Architecture in Landscape Architecture and the Master of Arts in Environmental Design should contact the School of Planning, Design, and Construction. Students are eligible to apply for admission to the dual degree program after completion of the first three years of curriculum requirements in the Bachelor of Landscape Architecture in Landscape Architecture. 
The School of Planning, Design, and Construction exists to educate individuals for professional careers in areas impacting the built environment, spanning the life of a constructed edifice or entity, from planning, to design, and construction management. The school offers Bachelor of Science, Bachelor of Arts and Bachelor of Landscape Architecture degree programs. Individuals meeting the general University requirements for admission shown in the Undergraduate Education section of this catalog are enrolled in the Undergraduate University Division but may declare a major preference in the School of Planning, Design, and Construction. Refer to the specific degree program for further details regarding admission requirements and program curriculum.

The school offers programs leading to bachelor’s degrees in the following fields:

- Construction Management
- Interior Design
- Landscape Architecture
- Urban and Regional Planning

The Bachelor of Science degree program with a major in urban and regional planning is offered through the College of Social Science. For information about this program, refer to the statement on the College of Social Science section of this catalog.

CONSTRUCTION MANAGEMENT

The program is designed to provide a student with a background in managerial, technological, economic, social, political, and environmental aspects of residential and commercial construction. A systems approach is used and includes project management, construction science, land acquisition and development, real estate, finance, management, and marketing. Career opportunities include supervisory and managerial employment within commercial and residential contracting, land development, and real estate organizations; material distribution systems; financial institutions; and governmental agencies.

Admission as a Junior

Construction management builds upon a basic understanding of mathematics, physics, statistics, and economics to develop the skills necessary to manage construction projects. Prior to enrollment in the major, students must have demonstrated this basic understanding by a minimum performance in the courses listed and a minimum overall grade point average.

Enrollment in the construction management major is limited. Those seeking admission must at least meet the criteria listed below.

1. Completion of at least 56 credits.
2. Completion of the following courses with a minimum grade of 2.0 in each course:
   - MTH 124 Survey of Calculus I ............ 3
   - PHY 231 Introductory Physics I ........ 3
   - STT 200 Statistical Methods ........... 3
   - Or
   - STT 201 Statistical Methods ........... 4
   - Or
   - STT 315 Introduction Probability and Statistics for Business ...... 3
   - Or
   - STT 421 Statistics I ........... 3
   - EC 201 Introduction to Microeconomics .... 3
   - Or
   - EC 202 Introduction to Macroeconomics .... 3

3. Have either a cumulative grade-point average of 3.00 in the CMP courses listed in item 2. or a cumulative MSU grade-point average of 3.00.

While meeting all of the criteria above is necessary to be considered for admission to the Bachelor of Science Degree in Construction Management, it does not guarantee admission. Other factors such as work experience, personal experience, and diversity may also be considered.

For additional information about admissions criteria and procedures, students should contact the Construction Management Program in the School of Planning, Design, and Construction.

Requirements for the Bachelor of Science Degree in Construction Management

1. The University requirements for bachelor’s degrees as described in the Undergraduate Education section of this catalog; 120 credits, including general elective credits, are required for the Bachelor of Science degree in Construction Management.

The University’s Tier II writing requirement for the Construction Management major is met by completing Construction Management 385 or 435 or 436. Those courses are referenced in item 3. b. below.

Students who are enrolled in the Construction Management major leading to the Bachelor of Science degree may complete an alternative track to Integrative Studies in Biological and Physical Sciences that consists of Physics 231 and 251 and one of the following choices: Biological Science 161 and 171 or Biological Science 162 and 172 or Plant Biology 105 and 106 or Microbiology and Molecular Genetics 205 and 206. The completion of Physics 251 and Biological Science 171 or 172 or Plant Biology 106 or Microbiology and Molecular Genetics 206 satisfies the laboratory requirement. With advisor approval, for this laboratory requirement, Biological Science 171 or 172, Plant Biology 106 and Microbiology and Molecular Genetics 206 may be waived if the student completes another chemistry laboratory course or a physics laboratory course beyond Physics 251.

Physics 231 and 251 and Biological Science 161 and 171 or 162 and 172 or Plant Biology 105 and 106 or Microbiology and Molecular Genetics 205 and 206 may be counted toward both the alternative track and the requirements for the major referenced in item 3. below.

2. The requirements of the College of Agriculture and Natural Resources for the Bachelor of Science degree.

Certain courses referenced in requirement 3. below may be counted toward College requirements as appropriate. The completion of Mathematics 124 satisfies the College's mathematics requirement.

3. The following requirements for the major:

a. All of the following courses:...... 64
   - ACC 230 Survey of Accounting Concepts ............ 3
   - CMP 101 Principles of Construction Management .......... 2
   - CMP 124 Residential Construction Materials and Methods ....... 3
   - CMP 210 Commercial Construction Methods ........ 3
   - CMP 211 Building Codes ........ 3
   - CMP 222 Statics and Strengths of Materials ........ 3
   - CMP 230 Utility Systems .......... 4
   - CMP 305 Site Construction and Measurement ........... 3
   - CMP 311 Construction Project Scheduling ........... 3
   - CMP 315 Construction Quantily Surveying ........... 3
   - CMP 322 Structural Systems ........ 3
   - CMP 325 Real Estate Principles and Construction Finance .......... 4
   - CMP 328 Construction Presentation Graphics and Building Information Modeling .......... 2
   - CMP 385 Construction Documents and Contracts (W) ........ 3
   - CMP 401 Construction Safety Management .......... 3
   - CMP 415 Cost Estimating and Analysis ........ 3
   - CMP 423 Construction Project Management ........ 3
   - COM 100 Human Communication ........ 3
   - CSE 101 Computing Concepts and Competencies .......... 3
   - GB 323 Introduction to Business Law ........ 3
   - MTH 124 Survey of Calculus I ........... 3
   - PHY 231 Introductory Physics I ........ 3
   - PHY 251 Introductory Physics Laboratory I ........ 3

   Students who pass a waiver examination will not be required to complete Computer Science and Engineering 101.

   Students must have a minimum grade-point of 2.00 in each of the following courses: CMP 305, 311, 315, 322, 325, 328, 385, 401, 415, and 423.
b. One of the following courses (3 credits):

CE 221 Statics ........................................ 3
CMG 297 Statics and Strengths of Materials .......... 3

c. One of the following courses (3 or 4 credits):

CE 312 Soil Mechanics .................................. 4
CE 471 Construction Engineering - Environment, Materials, and Planning ............................. 3
CMG 453 Land Development ............................ 3
CMG 481 Special Topics in Construction Management ......................................................... 3
IDES 240 Computer Aided Design for Designers ................................................................. 3
LA 230 Site Construction Materials and Methods ............................................................... 3
PDC 481 Special Topics ................................... 3
UP 458 Housing and Real Estate Development .......... 3

d. One of the following courses: ................................. 3

CMG 435 Residential Building and Development Projects (W) ...................................................... 3
CMG 436 Commercial Building Projects (W) ............ 3
CMG 492 Capstone Project Competitions ................. 3
CMG 493 Professional Internship in Building Construction Management .................................. 3

e. Complete four credits from the following courses: ............... 4

CEM 141 General Chemistry ................................ 4
CEM 161 Chemistry Laboratory I ........................ 1
PHY 232 Introductory Physics II ........................... 3
PHY 252 Introductory Physics Laboratory II ............. 1

f. Complete one of the following courses: ....................... 3 or 4

COM 225 An Introduction to Interpersonal Communication 3
COM 240 Introduction to Organizational Communication 4
ENG 226 Introduction to Creative Writing ................. 3
ENG 232 Writing as Exploration ........................... 3

SITE DESIGN

This major provides academic preparation designed to enable the student to enter the profession of site design. The program has been accredited by the Council for Interior Design Accreditation (CIDA).

Emphasis is placed on learning the means of satisfying functional and aesthetic requirements appropriate for a variety of specific interior spatial uses. Consideration is given to the human being and the micro-environment in the total complex of environmental relationships. The combination of courses and experiences provides students an opportunity to develop knowledge, skills, and insights needed to solve design problems creatively and effectively.

Students meeting the university admissions requirements are enrolled as freshmen and sophomores in the Neighborhood Student Success Collaborative but may declare a major preference for Interior Design.

Admission as a Junior

The number of students admitted as juniors to the major in interior design is limited. To be considered for admission, a student must have:
1. An all-university grade-point average of 2.50 or better.
2. A grade-point average of 3.00 or better in the following courses: Interior Design 140, 142, 150, 152, 240, 250, 252, 258, and Apparel and Textile Design 231. Those courses are referenced in item 3. a. below in the Requirements for the Bachelor of Arts Degree in Interior Design.

In addition, transfer students must have previous design work evaluated by the department prior to placements in required courses.

Selective admissions are made at the end of spring semester for Michigan State University and transfer students from those students who have met the criteria referenced above and who have completed Interior Design 252. The final selection of students to be admitted to the major is based on the cumulative grade-point average of all courses taken and a grade-point average calculated for selected courses and portfolio review by faculty members. In addition, factors such as diversity and residency may be considered.

Requirements for the Bachelor of Arts Degree in Interior Design

1. The University requirements for bachelor’s degrees as described in the Undergraduate Education section of this catalog; 120 credits, including general elective credits, are required for the Bachelor of Arts degree in Interior Design.

The University’s Tier II mathematics requirement for the Interior Design major is met by completing Interior Design 340, 440, 442, and 452. Those courses are referenced in item 3. a. below.

The completion of the College of Agriculture and Natural Resources mathematics requirement may also satisfy the University mathematics requirement.

2. The completion of the requirements of the College of Agriculture and Natural Resources for the Bachelor of Arts degree.

3. The following requirements for the major:

CREDITS

a. All of the following courses in the School of Planning, Design and Construction: ................................. 62
ATD 231 Textiles Materials ................................ 4
IDES 140 Design for Living ................................ 3
IDES 142 Design Theory Studio .......................... 3
IDES 150 Interior Design Drafting ......................... 3
IDES 152 Interior Environments .......................... 4
IDES 240 Computer Aided Design for Designers .... 3
IDES 250 CAD and Structural Systems ................. 3
IDES 252 Interior Design Synthesis I ...................... 4
IDES 340 Interior Design Specifications and Workroom Practices ................................................. 3
IDES 342 Interior Design: Human Dimensions ......... 3
IDES 343 Interior Design Presentation and Media ..... 3
IDES 344 History of Interior Design: Ancient ........... 3
IDES 350 Interior Design Lighting and Environmental Systems ....................................................... 3
IDES 352 Interior Design Synthesis II ...................... 4
IDES 354 History of Interior Design: Modern ............. 3
IDES 393 Introduction to Professional Practice ........... 1
IDES 440 Contemporary Design Issues ................... 2
IDES 441 Interior Design Open Office Systems ........... 1
IDES 442 Interior Design Programming .................... 3
IDES 451 Interior Design Professional Practice ........... 2
IDES 452 Interior Design Synthesis III ..................... 4

b. The following course: ..................................... 3
CSE 101 Computing Concepts and Competencies ....... 3
Students who pass a waiver examination will not be required to complete Computer Science and Engineering 101. An approved computer science course may be substituted for CSE 101.

c. The following course: ..................................... 5
MTH 116 College Algebra and Trigonometry ............. 5

d. One of the following courses: .............................. 3
EC 201 Introduction to Microeconomics .................. 3
EC 202 Introduction to Macroeconomics ................. 3

(e. Any one of the following History of Art options (6 to 9 credits):

(1) Any two History of Art courses (6 to 9 credits) ................................................................. 2
(2) Any one History of Art course (3 to 4 credits), and Study Abroad through enrollment in IDES 490 Independent Study (3 to 5 credits).
(3) Any one History of Art course (3 to 4 credits) and IDES 456 Historic Preservation and Sustainability (3 credits)

LANDSCAPE ARCHITECTURE

The undergraduate Bachelor of Landscape Architecture program provides a diverse learning experience which strives for a balance among philosophy, theory, and application of concepts related to past, present, and future problem-solving in landscape architecture and allied environmental planning and design professions.

The program includes professional courses in design theory and graphic communications, environmental perception, history, and plant materials and their uses; technical aspects of site development, design applications for representative land uses; site
planning for typical projects; community planning, housing and recreational development; and urban and regional design and planning.

The program offers meaningful design opportunities and challenges within the classroom and on community projects, which prepare the student to communicate through writing, speech and graphics. These objectives are met in group and in individual assignments where independent study and growth are encouraged.

The program in landscape architecture at Michigan State University has been accredited by the Landscape Architecture Accreditation Board (LAAB) since 1952.

Honors Study

Students interested in honors programs in landscape architecture should consult with an academic advisor.

Admission as a Junior

The number of students who can be admitted as juniors to the landscape architecture major is limited. To be considered for admission as a junior, a student must have completed the core courses referenced in item 2. below. Students who have been admitted as juniors are entitled to enroll in upper-level landscape architecture courses required for the Bachelor of Landscape Architecture degree.

To be admitted to the Bachelor of Landscape Architecture program, the following factors will be taken into consideration: (1) overall MSU grade-point average; (2) grade-point average in all landscape architecture courses; (3) evidence of creative works and service; and (4) a written essay.

Admissions are determined by the faculty on the basis of the relative qualifications of applicants and the enrollment capacity in the program. Admission is competitive.

Detailed information regarding admission requirements and procedures is available from the School of Planning, Design and Construction.

Requirements for the Bachelor of Landscape Architecture Degree in Landscape Architecture

1. The University requirements for bachelor's degrees as described in the Undergraduate Education section of this catalog; 130 credits, including general elective credits, are required for the Bachelor of Landscape Architecture degree in Landscape Architecture.

Students who are enrolled in the Landscape Architecture major leading to the Bachelor of Landscape Architecture degree in the School of Planning, Design and Construction may complete an alternative track to Integrative Studies in Biological and Physical Sciences that consists of the following courses: Plant Biology 105 and 106, and Chemistry 141 and 161. The completion of Plant Biology 106 and Chemistry 161 satisfies the laboratory requirement. Plant Biology 105 and 106, and Chemistry 141 and 161 may be counted toward both the alternative track and the requirements for the major referenced in item 2. below.

The completion of Mathematics 116 referenced in requirement 2. below may also satisfy the University mathematics requirement.

The University's Tier II writing requirement for the Landscape Architecture major is met by completing Landscape Architecture 480. That course is referenced in item 2 c. below.

2. The following requirements for the major:

School of Planning, Design and Construction

Dual Degree Program: Bachelor of Landscape Architecture in Landscape Architecture and Master of Arts in Environmental Design

The dual degree program provides an opportunity for students who are currently accepted into the Bachelor of Landscape Architecture program to enroll in graduate courses required in the Master of Arts degree in Environmental Design while completing the last year and a half (three semesters) of their bachelor's degree program.

Students interested in pursuing the dual degree of Bachelor of Landscape Architecture in Landscape Architecture and the Master of Arts in Environmental Design should contact the School of Planning, Design and Construction. Students are eligible to apply for admission to the dual degree program after completion of the first two years of curriculum requirements in the Bachelor of Landscape Architecture in Landscape Architecture. Admission to Master of Arts in Environmental Design must be approved before beginning graduate-level course work in the fourth year of the bachelor's degree program. Upon completion of the requirements for both the Bachelor of Landscape Architecture degree and the Master of Arts degree, both degrees are awarded simultaneously. The Master of Arts degree will not be awarded until the student has completed the requirements for the Bachelor of Landscape Architecture degree.

To be admitted to the dual degree program, the following factors will be taken into consideration:

1. Overall MSU grade-point average.
2. Grade-point average in all landscape architecture courses.
3. Evidence of creative works and service.
4. A written essay.

Admission is competitive and enrollment is limited for each entering class. Students who are not selected for admission into the dual degree program will be advised of other degree options. Students may reapply for admission during the following admissions cycle.

A student who is admitted to the dual degree program must:
1. Satisfy all of the requirements for the Bachelor of Landscape Architecture degree program to which the student was originally admitted.
2. Satisfy all of the requirements for the Master of Arts degree in Environmental Design.

Students admitted to the dual degree program will apply 9 credits of course work toward the master’s program for qualifying 400-level and above course work taken at the undergraduate level at Michigan State University. The 9 credits are applied toward the credit requirement of the master’s degree.

**Bachelor of Science Degree in Construction Management**

**Master of Science Degree in Construction Management**

The department welcomes applications from Michigan State University Construction Management undergraduate students at the end of their junior year. Admission applications must be made after the spring semester of the junior year when CMP 311, 315, and 385 have been completed, for an anticipated Spring graduation. Admission to the program requires a cumulative minimum undergraduate grade-point average of 3.5 and a grade-point average of 3.5 in all Construction Management (CMP) courses completed and approved program of study for the Master of Science degree in Construction Management at the time of admission, in addition to three letters of recommendation and a personal statement. Admission to the Linked Bachelor’s-Master’s program allows the application of up to 9 credits toward the master’s program for qualifying 400-level and above course work taken at the undergraduate level at Michigan State University or another postsecondary accredited institution of comparable academic quality. The number of approved credits, not to exceed 9, are applied toward the credit requirement of the master’s degree. Credits applied to the Linked Bachelor’s-Master’s program are not eligible to be applied to any other graduate degree program.

**GRADUATE STUDY**

Graduate study may lead to a Master of Arts, Master of Science, Master of Urban and Regional Planning or Doctor of Philosophy degree. The School has expertise and facilities available for advanced study and research in the following areas: Construction Management; Environmental Design; Planning, Design and Construction; and Urban and Regional Planning. The School offers programs leading to graduate degrees in the following fields:

**Master of Arts**
- Environmental Design

**Master of Science**
- Construction Management

**Master of International Planning Studies**
- International Planning Studies

**Master of Urban and Regional Planning**
- Urban and Regional Planning

**Doctor of Philosophy**
- Planning, Design and Construction

The Master of International Planning Studies degree program with a major in international planning studies and the Master of Urban and Regional Planning degree program with a major in urban and regional planning are offered through the College of Social Science. For information about those programs, refer to the statement on the School of Planning, Design, and Construction in the College of Social Science section of this catalog.

**CONSTRUCTION MANAGEMENT**

The Master of Science degree program with a major in construction management is designed to provide breadth in the managerial, technological, economic, and environmental aspects of construction. The program is also designed to provide depth through a systems approach encompassing project management, estimating, scheduling and project controls, land acquisition and development, architectural and engineering design, construction technology, real estate, finance, business management, and marketing.

The master’s program in construction management is available under either Plan A (with thesis) or Plan B (without thesis). Students who anticipate careers in teaching, consulting, or research, or who plan to pursue a doctoral program, are encouraged to select Plan A. After the student’s academic advisor has approved the student’s program of study under Plan A, the student may not pursue the program under Plan B without the approval of the school.

Students who are enrolled in the master’s program in construction management often take courses in business management, labor and industrial relations, civil engineering, human environment and design, resource development, urban planning, statistics, or education, in addition to courses in the major. Students may work directly with one or more faculty members on an independent basis to cover material that is not available through regular courses.

**Master of Science**

In addition to meeting the requirements of the university and of the College of Agriculture and Natural Resources, students must meet the requirements specified below.

**Admission**

To be considered for admission to the master’s degree program in construction management, an applicant must take the Graduate Record Examination General Test and have the scores submitted to the department.

To be admitted to the program on regular status, an applicant must:
1. Have a Bachelor of Science degree in construction management or in a related area such as architecture, business, design, engineering, management, or urban planning.
2. Have a cumulative grade–point average of at least 3.0 (on a 4.00 scale) for the undergraduate program.
3. Have experience in the construction industry acceptable to the department.
4. Have completed as part of the undergraduate program 3 semester credits of introductory calculus (MTH 124 Survey of Calculus I or its equivalent); 3 semester credits of introductory physics (PHY 231 Introductory Physics I or its equivalent).

Applicants who have not completed the credits referenced in item 4. above may be admitted on provisional status. In addition, students may be required to complete specified collateral courses, from the following list, with a grade-point average of at least 3.0. These courses will not count toward the degree. The guidance committee will determine which courses are required as collateral courses for each applicant.

<table>

AGRICULTURE AND NATURAL RESOURCES
School of Planning, Design and Construction

Requirements for the Master of Science Degree in Construction Management

The student must complete a total of 30 credits for the degree under Plan A (with thesis) or 33 credits for the degree under Plan B (without thesis). For students who elect independent study courses, including Construction Management 890, no more than 6 credits under Plan A and 9 credits under Plan B may be counted toward the requirements for the degree. The student’s program of study must be approved by the student’s academic advisor and must meet the requirements specified below:

CREDITS

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>CMP 817</td>

</tr>
</tbody>
</table>

Additional Requirements for Plan A

1. Complete 6 credits of Construction Management 899. No more than 6 credits may be counted toward the requirements for the degree under Plan A.
2. Complete and defend a master’s thesis acceptable to the student’s guidance committee.

Requirements for Plan B

1. A minimum of 24 credits in 800–900 level courses.
2. All of the following courses:
   - CMP 817 Construction Management Information Systems
   - CMP 822 Legal Issues in Construction
   - CMP 892 Construction Management Research Seminar
3. One additional 800-level Construction Management course, excluding Construction Management 890, 898, and 899. Students without a background in construction project scheduling and estimating must complete Construction Management 811 and 815 in partial fulfillment of this requirement.
4. One graduate course in research methods.
5. One 400-level course or above in statistics.

Additional Requirements for Plan B

1. Complete 6 credits of Construction Management 899. No more than 6 credits may be counted toward the requirements for the degree under Plan B.
2. Complete and defend a master’s thesis acceptable to the student’s guidance committee.

Transfer Credits

No more than 9 semester credits of graduate course work (excluding research and thesis credits) may be transferred from other recognized educational institutions.

ENVIRONMENTAL DESIGN

Master of Arts

The College of Agriculture and Natural Resources in cooperation with the Landscape Architecture program and the Interior Design program in the School of Planning, Design and Construction and the Departments of Horticulture and Community, Agriculture, Recreation and Resource Studies participate in the Master of Arts degree in Environmental Design. The College of Agriculture and Natural Resources is the primary administrative unit.

The purpose of this master’s degree is to train prospective or practicing professionals to address the complex interdisciplinary nature of environmental design. Students will develop a highly individualized plan of study with a focus in a relevant design area such as golf course architecture, landscape reclamation, visual quality modeling, landscape restoration, interiorscapes, wellness/therapeutic garden design, landscape development systems, plant management systems, adaptive reuse of facilities for tourism and recreation, park safety design and development, and park and tourism development and design within ecological systems.

The Master of Arts Degree in Environmental Design addresses four areas of professional development. These include:
1. acquisition of in-depth knowledge in the area of environmental design theory;
2. development of problem-solving skills within an interdisciplinary professional context;
3. development of technological expertise and a knowledge base in a selected area of environmental design; and
4. a greater command of graphic, written, and oral communication skills.

All students will take a core of three courses in environmental design (theory, seminar, and studio), in addition to either a Plan A (with thesis) or Plan B (without thesis). Students will elect relevant courses in fields which pertain to their design area of interest.

The program is planned to provide an alternative to traditional professional degrees by addressing the needs of students with undergraduate design backgrounds who wish to work in an interdisciplinary setting while pursuing an area of individual interest.

Admission

To be considered for admission to the Master of Arts in Environmental Design, the applicant must have:
1. completed a bachelor’s degree in a design related field such as horticulture, park and recreation, interior design, landscape architecture, or architecture;
2. a cumulative grade-point average of at least 3.0 in design and technology courses with an academic background sufficient to indicate probable success in the program.
3. satisfactory scores on the Graduate Record Examination General Test (GRE) as judged by the environmental design faculty. No substantive area GRE examinations are required.
4. acceptance as an advisee by a participating environmental design faculty member.

In addition to meeting the requirements of the university and the College of Agriculture and Natural Resources, students must meet the requirements specified below.

Requirements for the Master of Arts Degree in Environmental Design

Students in the Master of Arts in Environmental Design must complete a total of 33 credits for the degree under either Plan A (with thesis) or Plan B (without thesis). A minimum of 17 of those credits must be at the 800-level or above, distributed as follows:

2. Guided elective courses related to the student’s area of design interest, chosen in consultation with the student’s academic advisor.

For Plan A, students must complete a minimum of 6 and a maximum of 9 credits of Master’s Thesis Research (899) in one of the following departments: Planning, Design and Construction; Horticulture; or Community, Agriculture, Recreation and Resource Studies. They must also prepare a written thesis and pass an oral examination.

For Plan B, students must complete 6 credits of Master’s Research (898) in one of the following departments: Planning, Design and Construction; Horticulture; or Community, Agriculture, Recreation and Resource Studies. They must also complete either a major planning or design project or pass a comprehensive examination.
PLANNING, DESIGN AND CONSTRUCTION

Doctor of Philosophy

The many aspects of our built and natural environment – buildings, facilities, interior spaces, infrastructure, neighborhoods, and communities – are an integral part of our society. Every new space and structure serves to define and shape a community’s personality. Poor planning design and/or construction can compromise a community’s appearance and drain its resources. Conversely, well-planned, designed and constructed environments sustain and enrich a community.

The Doctor of Philosophy in Planning, Design and Construction with a concentration in construction management, environmental design, or urban and regional planning will enable students to meet future challenges. Graduates of this program will possess the knowledge and skills necessary to understand the effects of plans, regulations, design, materials, project management techniques, and construction systems on the economic, environmental, and social concerns of stakeholders and society.

Admission

To be considered for regular admission to the Doctor of Philosophy degree program in Planning, Design and Construction, an applicant must have all of the following:

1. A master’s degree in a related field.
2. A cumulative grade-point average of 3.5 on a 4.0 scale.
3. GRE scores no lower than 301 in combined verbal and quantitative and at least 4.0 analytical.
4. TOEFL scores (for international applicants):
   a. Paper-based – no lower than 575 (with no sub scores below 52)
   b. Computer-based – no lower than 235 (with no sub scores below 19)
   c. Internet-based – no lower than 90 (with no sub scores below 19 for reading, listening, and speaking, and no writing sub score below 22)

Additionally, students are encouraged to submit a sample of scholarly work or a portfolio of design work. Depending on the proposed area of concentration, the school may ask for additional background information.

Provisional admission may be granted to an applicant who does not meet the above requirements but demonstrates outstanding potential. Collateral course work will not count towards degree requirements.

In addition to meeting the requirements of the university and of the College of Agriculture and Natural Resources and the College of Social Science, the student must meet the requirements specified below.

Guidance Committee

The guidance committee should be comprised of at least four faculty members. The chairperson and one other committee member should be from the student’s area of concentration within the School, a third member can be from the student’s area of concentration or another area of concentration within the School, and a fourth member must be from outside the school.

DEPARTMENT of PLANT, SOIL and MICROBIAL SCIENCES

James J. Kells, Chairperson

UNDERGRADUATE PROGRAMS

The department offers a Bachelor of Science degree in Crop and Soil Sciences, with three concentrations: agronomic sciences, turfgrass management, and advanced studies. The undergraduate curriculum is designed to prepare students to apply scientific principles of crop and soil management for careers in agriculture, agribusiness, turfgrass management, government agencies, and related areas.

Students in agronomic science study the close relationship between crop science and soil science. The goal of the crop scientist is to increase plant production, grain quality, and profit by utilizing genetics, breeding, physiology, and pest management. The goal of the soil scientist is to improve soil fertility and the chemical, physical, and microbial characteristics of the soil. These two subjects are combined in agronomic sciences to develop an integrated approach to the management of crops and soils. Demands for new applications are constantly emerging. There are many complex interactions in plant growth and genetics; the physical, chemical, and biological factors involved in improving crop yields; and the soil-plant-animal relationships that determine the sustainability of cropping systems. Department faculty are nationally and internationally recognized for excellence in both the basic and applied plant and soil sciences and work as partners with agricultural industries to serve agriculture, the citizens of Michigan, the nation, and the world. Students are well prepared for employment in various positions within the food production industry to help feed a burgeoning human population, while understanding the importance of agricultural sustainability. They are highly sought by agribusinesses and governmental agencies to help address food production issues for the future.

The Turfgrass Management concentration encompasses many of the same agronomic principles and applies them to the management of grasses for use on golf courses, athletic fields, home lawns, and recreational areas. Turfgrass adds beauty to the landscape, minimizes sound and air pollution, stabilizes the soil, and reduces the heat load on homes through transpirational cooling.

Students in the advanced studies concentration are fully prepared to accept employment upon graduation, but take additional courses to prepare them for graduate study. These include additional mathematics, chemistry, biochemistry, and statistics courses.
The University requirements for bachelor's degrees as described in the expanding knowledge base of the biological and physical sciences and the utilization of those sciences to produce food and fiber of high quality on a competitive basis to promote sustainability, and to obtain increased nutrient-use efficiency, proper land use, increased plant adaptation to environmental and other stresses, decreased soil erosion, and decreased environmental pollution. Crop and soil scientists utilize the principles of genetics, plant breeding, crop physiology, weed science, turfgrass science, soil physics, soil fertility, soil genesis and classification, and soil chemistry.

Majors complete a common core of courses and one concentration: Agronomic Sciences, Turfgrass Management or Advanced Study. Students enrolled in this degree program, based on the agreement of cooperation between Michigan State University and Beijing Forestry University, Northeast Agricultural University, Sichuan Agricultural University, and Suzhou Polytechnic Institute of Agriculture in China must complete the concentration in Turfgrass Management.

1. Agronomic Sciences is designed to prepare students to work as agronomists. These scientists have career opportunities in agricultural business and in government agencies such as departments of agriculture and/or natural resources, the Natural Resources Conservation Service and the Extension Service. They also work and consult pest management specialists and managers of grower organizations and with land appraisal firms, agencies involved with environmental issues, and in international agriculture.

2. Turfgrass Management is designed to prepare students for the rapidly expanding area of urban agriculture. Graduates have career opportunities in the industries involved with management of golf courses, athletic fields, lawns and park and grounds management.

3. Advanced Study is specifically designed for those students who plan to pursue graduate studies. Although students who complete the other concentrations may pursue graduate study, this concentration requires the completion of advanced levels of mathematics and advanced courses in the basic sciences.

Students may also complete a specialization in international agriculture, agribusiness management, agriculture and natural resources biotechnology, connecting learning, environmental economics, food industry management, or environmental studies. Students may qualify to teach agriscience in high school under a plan of study cooperatively developed by the student's faculty advisor and the Department of Community, Agriculture, Recreation and Resource Studies. For additional information on any of the specializations, refer to the General Index section in this publication or visit http://www.reg.msu.edu/UCC/specializations.asp.

Requirements for the Bachelor of Science Degree in Crop and Soil Sciences

1. The University requirements for bachelor's degrees as described in the Undergraduate Education section of this catalog; 120 credits, including general elective credits, are required for the Bachelor of Science degree in Crop and Soil Sciences.

   The University's Tier II writing requirement for the Crop and Soil Sciences major is met by completing two courses as specified below: Agronomic Sciences: Both of the following courses: Crop and Soil Sciences 488 and 492. Those courses are referenced in items 3. a., and 3. b. below. Turfgrass Management: Both of the following courses: Crop and Soil Sciences 382 and 492. Those courses are referenced in items 3. a., and 3. b. below.

Advanced Study: Both of the following courses: Crop and Soil Sciences 488 and 492. Those courses are referenced in items 3. a., and 3. b. below. Students who are enrolled in the Agronomic Sciences or Turfgrass Management concentrations of the Crop and Soil Sciences major leading to the Bachelor of Science degree in the Department of Plant, Soil and Microbial Sciences, may complete another track to Integrative Studies in Biological and Physical Sciences that consists of the following courses: Plant Science Laboratory 141. Plant Biology 105 and 106 and Chemistry 141, 143, and 161.

The completion of Plant Biology 106 and Chemistry 161 satisfies the laboratory requirement. Plant Biology 105 and Chemistry 151, 152, and 161. The completion of Chemistry 161 satisfies the laboratory requirement. Plant Biology 105 and Chemistry 151, 152, and 161 may be counted toward both the alternative track and the requirements for the major referenced in item 3. below.

Students who are enrolled in the Advanced Study concentration of the Crop and Soil Sciences major leading to the Bachelor of Science degree in the Department of Plant, Soil and Microbial Sciences, may complete an alternative track to Integrative Studies in Biological and Physical Sciences that consists of the following courses: Plant Biology 105 and Chemistry 151, 152, and 161. The completion of Chemistry 161 satisfies the laboratory requirement. Plant Biology 105 and Chemistry 151, 152, and 161 may be counted toward both the alternative track and the requirements for the major referenced in item 3. below.

The completion of the College of Agriculture and Natural Resources mathematics requirement may also satisfy the University mathematics requirement.

2. The requirements of the College of Agriculture and Natural Resources for the Bachelor of Science degree.

   Certain courses referenced in requirement 3. below may be counted toward College requirements as appropriate. For students who select the Advanced Study Option, the completion of Mathematics 124 and 126 satisfies the College’s mathematics requirement.

3. The following requirements for the major:

   ![CREDITS](null)

   a. All of the following courses: ........................................ 7
   CEM 161 Chemistry Laboratory ..................................... 1
   CSS 110 Computer Applications in Agronomy .......... 2

**MINOR IN APPLIED DEVELOPMENT IN INTERNATIONAL AGRICULTURE AND NATURAL RESOURCES**

This minor is available as an elective to students who are enrolled in bachelor's degree programs and is designed for students who have an interest in applied development in international agriculture and natural resources. It seeks to increase student understanding of global agriculture, particular agriculture-related problems and issues in developing and developed nations, and issues related to sustainability and stewardship of the Earth. Students who complete this minor will gain knowledge and experience relevant for careers in international agriculture, international development, and related fields.

The College of Agriculture and Natural Resources and James Madison College in cooperation with the Departments of Agricultural, Food, and Resource Economics, Animal Science, Food Science and Human Nutrition, Plant, Soil and Microbial Sciences, and Fisheries and Wildlife, and the College of Social Science in cooperation with the Department of Geography participate in the Minor in Applied Development in International Agriculture and Natural Resources. The Department of Plant, Soil, and Microbial Sciences is the primary administrative unit.

The student’s program of study for the minor must be approved by the advisor of the Minor in Applied Development in International Agriculture and Natural Resources. The advisors are in the Department of Plant, Soil, and Microbial Sciences and James Madison College in cooperation with the Departments of Agriculture, Food, and Resource Economics, Animal Science, Food Science and Human Nutrition, Plant, Soil and Microbial Sciences, and Fisheries and Wildlife. With the approval of the department that administers the student’s degree program, courses that are used to satisfy the requirements for the minor may also be used to satisfy the requirements for the bachelor’s degree.

**Requirements for the Minor in Applied Development in International Agriculture and Natural Resources**

The student must meet the requirements specified below:

Complete a minimum of 17 credits from the following:

1. **One of the following courses (5 credits):**
   - CSS 294 Issues in International Agriculture
   - MTH 116 Precalculus
   - PLB 106 Turfgrass Science

2. **One of the following courses (3 credits):**
   - CSS 201 Introduction to Microeconomics
   - CSS 340 Applied Soil Physics
   - CSS 350 Introduction to Plant Genetics

3. **One of the following courses (3 credits):**
   - CSS 201 Introduction to Microeconomics
   - CSS 340 Applied Soil Physics
   - CSS 350 Introduction to Plant Genetics

4. **Complete a minimum of 3 credits from the following:**
   - CSS 315 Professional Development Seminar
   - PLB 105 Plant Pathology
   - PLB 266 Turf Pathology

5. **Complete a minimum of 3 credits from the following:**
   - CSS 315 Professional Development Seminar
   - PLB 105 Plant Pathology
   - PLB 266 Turf Pathology

6. **Complete a minimum of 3 credits from the following:**
   - CSS 315 Professional Development Seminar
   - PLB 105 Plant Pathology
   - PLB 266 Turf Pathology

7. **Complete a minimum of 3 credits from the following:**
   - CSS 315 Professional Development Seminar
   - PLB 105 Plant Pathology
   - PLB 266 Turf Pathology

8. **Complete a minimum of 3 credits from the following:**
   - CSS 315 Professional Development Seminar
   - PLB 105 Plant Pathology
   - PLB 266 Turf Pathology

9. **Complete a minimum of 3 credits from the following:**
   - CSS 315 Professional Development Seminar
   - PLB 105 Plant Pathology
   - PLB 266 Turf Pathology

10. **Complete a minimum of 3 credits from the following:**
    - CSS 315 Professional Development Seminar
    - PLB 105 Plant Pathology
    - PLB 266 Turf Pathology
MINOR IN SUSTAINABLE AGRICULTURE AND FOOD SYSTEMS

The Minor in Sustainable Agriculture and Food Systems is designed to foster active learning about agriculture and food systems for undergraduate students from different disciplinary backgrounds. Contemporary agriculture and food systems issues will be considered in biological, ecological, social, and economic contexts.

The minor is available as an elective to students who are enrolled in bachelor’s degree programs at Michigan State University. With the approval of the department and college that administers the student’s degree program, the courses that are used to satisfy the minor may also be used to satisfy the requirements for the bachelor’s degree. The student’s program of study must be approved by the Department of Plant, Soil, and Microbial Sciences in advance and in writing.

Requirements for the Minor in Sustainable Agriculture and Food Systems

The student must complete 15 credits from the following:

1. All of the following courses (6 credits):
   - CSS 101 Introduction to Crop Science
   - CSS 360 Soil Biology
   - CSS 431 International Agricultural Systems
   - CSS 442 Agricultural Ecology
   - ENT 479 Organic Pest Management (W)
   - HNF 150 Introduction to Human Nutrition

2. One or two of the following courses (3 to 6 credits):
   - Agricultural Sciences
   - CSS 171 Operations Budgeting for Golf Course Managers
   - CSS 262 Turfgrass Management Seminar
   - CSS 282 Turfgrass Physiology
   - CSS 288 Principles of Weed Management
   - CSS 343 Community Food and Agricultural Systems
   - CSS 345 Food Safety
   - CSS 360 Soil Biology
   - CSS 424 Sustainable Agriculture and Food Systems: Integration and Synthesis
   - CSS 431 International Agricultural Systems
   - CSS 442 Agricultural Ecology
   - CSS 479 Organic Pest Management (W)

3. One or two of the following courses (3 to 6 credits):
   - Social Sciences
   - ABM 400 Public Policy Issues in the Agri-Food System
   - CSUSB 343 Community Food and Agricultural Systems
   - CSS 262 Turfgrass Management Seminar
   - CSS 282 Turfgrass Physiology
   - CSS 288 Principles of Weed Management
   - CSS 343 Community Food and Agricultural Systems
   - CSS 345 Food Safety
   - CSS 360 Soil Biology
   - CSS 424 Sustainable Agriculture and Food Systems: Integration and Synthesis

GRADUATE STUDY

The Department of Plant, Soil, and Microbial Sciences offers programs leading to Master of Science and Doctor of Philosophy degrees in crop and soil sciences, plant breeding, genetics and biotechnology—crop and soil sciences, and in plant pathology. The department also offers a Doctor of Philosophy degree program in crop and soil sciences—environmental toxicology.

Students enrolled in the Doctor of Philosophy degree program may elect a Specialization in Biotechnology. For additional information, refer to the statement on the specialization.

Students who are enrolled in Master of Science degree programs in the Department of Plant, Soil and Microbial Sciences may elect a Specialization in Food Safety. For additional information, refer to the statement on the specialization in the College of Veterinary Medicine section of this catalog.

CROP AND SOIL SCIENCES

The department offers the following areas of specialization within the field of crop and soil sciences: plant breeding and genetics; crop physiology, ecology, and management; weed science; turfgrass management; soil genesis and classification; soil microbiology and biochemistry; soil physics; soil chemistry; soil biophysics; soil fertility; and environmental and pollution aspects of soil science, including the study of waste disposal on land. Graduate programs of study are designed to reflect the individual needs and interests of students.

Master of Science

In addition to meeting the requirements of the university and of the College of Agriculture and Natural Resources, students must meet the requirements specified below.

Admission

Applicants for admission to the master's degree program should have a bachelor's degree in crop and soil sciences or in a related field such as botany or chemistry. Applicants should also have substantial academic background in the physical sciences (including chemistry and physics), in the biological sciences (including botany), and in mathematics. The completion of an undergraduate crop and soil sciences major with an agricultural science specialization would be considered ideal. Students with deficiencies in their backgrounds will be required to complete collateral courses in addition to the courses that are required for the master's degree.
Requirements for the Doctor of Philosophy Degree in Crop and Soil Sciences

The student may elect either Plan A (with thesis) or Plan B (without thesis). A total of 30 credits is required for the degree under either Plan A or Plan B. In addition to courses in the major, a minor or study in areas related to crop and soil sciences is required. Students are encouraged to select such courses as botany, biochemistry, chemistry, geology, plant pathology, and statistics. The student is required to complete satisfactorily one semester of teaching.

Doctor of Philosophy

In addition to meeting the requirements of the university and of the College of Agriculture and Natural Resources, students must meet the requirements specified below.

Requirements for the Doctor of Philosophy Degree in Crop and Soil Sciences

In addition to courses in the major, a minor or study in areas related to crop and soil sciences is required. Students are encouraged to select such courses as botany, biochemistry, chemistry, geology, plant pathology, and statistics. The student is required to complete satisfactorily one semester of teaching.

CROP AND SOIL SCIENCES—ENVIRONMENTAL TOXICOLOGY

Doctor of Philosophy

For information about the Doctor of Philosophy degree program in crop and soil sciences—environmental toxicology, refer to the statement on Doctoral Program in Environmental and Integrative Toxicological Sciences in the Graduate Education section of this catalog.

PLANT BREEDING, GENETICS and BIOTECHNOLOGY—CROP and SOIL SCIENCES

The Department of Plant, Soil and Microbial Sciences offers Master of Science and Doctor of Philosophy degree programs in plant breeding, genetics and biotechnology—crop and soil sciences. The requirements for admission and the requirements for the degree are specified in the statement on Interdepartmental Graduate Programs in Plant Breeding, Genetics and Biotechnology.

PLANT PATHOLOGY

Master of Science

Plant pathology graduate students may study in one or more emphasis areas, including phytobacteriology, mycology, virology, epidemiology, host parasite interactions, soil microbiology, disease management and molecular biology. Commodity-oriented strategic research areas in which the above emphasis areas may be studied include vegetable crops, fruit crops, nursery, landscape and ornamentals, field crops, turf crops, and forest and tree pathology. Students are urged to take courses which provide a broad background in biological and physical sciences in addition to training in specialized areas.

In addition to meeting the requirements of the university and the College of Agriculture and Natural Resources, students must meet the requirements specified below.

Admission

Regular admission may be granted to those students who have a bachelor’s degree or its equivalent, a 3.00 grade point average, and appropriate training in the biological and physical sciences and mathematics.

Provisional admission may be granted to those students who do not meet the requirements for regular admission.

Requirements for the Master of Science Degree in Plant Pathology

The master’s degree program in plant pathology is available under either Plan A (with thesis) or Plan B (without thesis). The student’s program of study is arranged by a guidance committee which includes the major professor.

For both Plan A and Plan B, students must:

1. Complete at least 30 credits including at least two graduate-level seminar courses in the biological sciences, one of which must be Plant Pathology 894.
2. Acquire teaching experience by assisting in at least one course.
3. Demonstrate a reading knowledge of a foreign language if required by the guidance committee.

Additional Requirement for Plan A:
Pass a final oral examination in defense of the thesis.

Additional Requirement for Plan B:
Pass a final examination or evaluation.

Doctor of Philosophy

The objective of this program is to provide a high quality plant pathology graduate experience to equip students with the skills necessary for research, teaching and extension, or other agriculture-related positions that require the Doctor of Philosophy degree.

In addition to meeting the requirements of the university and the College of Agriculture and Natural Resources, students must meet the requirements specified below.

Admission

Regular admission may be granted to those students having a master’s degree or its equivalent, a 3.00 grade point average, and appropriate training in the biological and physical sciences and mathematics. Outstanding students without a master’s degree may be accepted.

Provisional admission may be granted to those students who do not meet the requirements for regular admission.

Requirements for the Doctor of Philosophy Degree in Plant Pathology

All doctoral students in plant pathology must meet the requirements specified below:

1. Pass a preliminary examination.
2. Acquire teaching experience by assisting in two courses.
3. Complete:

   CREDITS
   a. All of the following courses:
      PLP 405 Introductory Plant Pathology .................... 3
      PLP 810 Current Concepts in Plant Pathology ............ 3
      PLP 894 Seminar in Plant Pathology ..................... 2
   b. One of the following courses:
      PLP 812 Epidemiology of Plant Diseases ................ 3
      PLP 881 Molecular and Biochemical Plant Pathology ...... 3
      PLP 885 Plant Diseases in the Field ..................... 2
   c. Two of the following courses:
      ENT 870 Nematode Management in Crop Systems .......... 3
      PLP 847 Advanced Mycology ................................ 4
      PLP 880 Plant Virology ................................... 4
      PLP 884 Prokaryotic Diseases of Plants .................. 4

51
The student must complete 13 to 14 credits from the following:

GRADUATE SPECIALIZATION IN ECOLOGICAL FOOD AND FARMING SYSTEMS

The Graduate Specialization in Ecological Food and Farming Systems is designed to foster an understanding of biogeochemical, socioeconomic, and policy concepts using experiential learning within the individual's program of study as a venue for multidisciplinary work. For global perspectives, students are encouraged to participate in either a study abroad course with ecological food and farming systems content, or in a course with international focus.

The specialization is available as an elective to students who are enrolled in master's or doctoral degree programs at Michigan State University. With the approval of the department and college that administers the student's degree program, the courses that are used to satisfy the specialization may also be used to satisfy the requirements for the master's or doctoral degree. The students program of study must be approved by the advisor for the specialization in the Department of Plant, Soil and Microbial Sciences in advance and in writing.

Students may enroll in Community, Agriculture, Recreation and Resource Studies 891B more than once.

INSTITUTE of AGRICULTURAL TECHNOLOGY

Founded in 1894, the Institute of Agricultural Technology delivers innovative, educational programs on campus and with community college partners that develop career-ready graduates through intensive, practical learning and skill enhancement in agricultural, environmental, and applied technologies. The Institute seeks to prepare students for dynamic careers in a changing world. Programs are designed to be assessable, affordable and applied. Graduates have the knowledge and skill base to meet the needs of the industry. Certificate programs vary from 18 to 24 months in length. Programs are highly respected statewide, nationally, and internationally. Courses are taught by faculty and staff in the College of Agriculture and Natural Resources, so students gain from the research and extension programs at Michigan State University. For additional information on any of the certificate programs, write to the Institute of Agricultural Technology, Michigan State University, Agriculture Hall, 446 W. Circle Drive, Room 121, East Lansing, MI 48824-1039.

PROGRAMS

Agricultural Industries

The Agricultural Industries program is designed to provide students in gaining in-depth agricultural industry and business knowledge to apply to their own operation or to launch a career in the industry. Students have the flexibility to focus on agronomy, horticulture, animal science or agricultural business through integration of hands-on laboratory learning and classroom formats. Students who are interested may be eligible to transfer into a four-year degree program at MSU upon completion of the certificate.
Requirements for Agricultural Industries

The student must complete 48 credits from the following:

1. All of the following courses (31 to 34 credits):
   - ABM 100 Decision-making in the Agri-Food System .................. 3
   - ABM 130 Farm Management I ........................................... 3
   - AT 045 Agricultural Communications .................................. 2
   - AT 055 Agricultural Finance ............................................. 2
   - AT 071 Technical Mathematics .......................................... 2
   - AT 214 Leadership Development in Agriculture and Natural Resources Industries ............................................. 2
   - AT 293 Professional Internship in Agricultural Technology ........... 2
   - CSS 101 Introduction to Crop Science .................................. 3
   - CSS 101L Introduction to Crop Science Laboratory ...................... 1
   - CSS 105 Agricultural Industries Seminar .................................. 1
   - CSS 110 Computer Applications in Agronomy ......................... 2
   - CSS 120 Issues in Food and Agriculture ..................................... 3
   - CSS 288 Principles of Weed Management ...................................... 3

2. One of the following courses (3 credits):
   - ABM 222 Agribusiness and Food Industry Sales (W) ..................... 3
   - ABM 225 Commodity Marketing I .......................................... 3

3. One of the following courses (2 or 3 credits):
   - CSS 210 Fundamentals of Soil Science ....................................... 2

4. Complete a minimum of 13 elective credits in the college as approved by the program coordinator.

   Students who do not demonstrate math proficiency through the IAT-administered Accuplacer placement test or college-level transfer credit must complete AT 045 Technical Mathematics (2 credits) or an equivalent course as approved by the program coordinator.

   Students who do not demonstrate math proficiency through the IAT-administered Accuplacer placement test or college-level transfer credit must complete AT 045 Technical Mathematics (2 credits) or an equivalent course as approved by the program coordinator.

Agricultural Operations

The Agricultural Operations program provides students with a solid background in plant and soil science, precision agriculture, water management, entomology, plant pathology and business management. It exposes students to exciting opportunities available in the industry.

Requirements for Agricultural Operations

Students must complete 55 credits from the following:

1. All of the following courses (29 credits):
   - ABM 130 Farm Management I ........................................... 3
   - AE 131 Agricultural Water Resource Management ...................... 3
   - AE 143 Application of Precision Agriculture Technologies .......... 3
   - AT 202 Agricultural Regulation, Compliance and Safety .............. 3
   - AT 293 Professional Internship in Agricultural Technology .......... 3
   - CSS 101 Introduction to Crop Science .................................. 3
   - CSS 105 Agricultural Industries Seminar .................................. 1
   - CSS 135 Crop Scouting and Investigation .................................. 3
   - CSS 143 Introduction to Soil Science ..................................... 3
   - ENT 110 Applied Entomology of Economic Plants ....................... 3
   - PLP 105 Fundamentals of Applied Plant Pathology ..................... 2

2. Completion of a minimum of 5 additional elective credits in the college as approved by the program coordinator in the Institute of Agricultural Technology.

3. Completion of 21 credits of additional course work through Delta College, Glen Oaks Community College, Kellogg Community College, Monroe Community College, Montcalm Community College, Muskegon Community College, Northwestern Michigan College, Southwestern Michigan College, or West Shore Community College. All course work must be approved by the program coordinator in the Institute of Agricultural Technology.

Applied Horse Science

The Applied Horse Science certificate, in partnership with Montcalm Community College, provides students the opportunity to study an in-depth horse science curriculum outside of the traditional classroom and provides learning experiences that improve the profitability, animal welfare, environmental stewardship and recreation by horse enthusiasts.

Requirements for Applied Horse Science

1. All of the following courses (14 credits):
   - ANS 140 Fundamentals of Horsemanship .................................. 2
   - ANS 149 Horse Management Clerkship ................................... 2
   - ANS 215 Introduction to Judging of Horses .................................. 2
   - ANS 225 Horse Behavior and Welfare ..................................... 2
   - ANS 243 Horse Nutrition and Feeding ..................................... 2
   - ANS 244 Horse Facility Design and Management ......................... 2
   - ANS 247 Horse Health ....................................................... 2

2. One of the following courses (2 credits):
   - ANS 140 Fundamentals of Horsemanship .................................. 2
   - ANS 148 Methods of Safe Horsemanship ................................... 2

3. Two credits from the following courses (2 credits):
   - ANS 143 Principles of Trail Riding ....................................... 1
   - ANS 144 Introduction to Horse Breeding and Foal Management ....... 1
   - ANS 148 Methods of Safe Horsemanship ................................... 2
   - ANS 248 Horse Reproductive Technology and Breeding Techniques .... 2

4. Complete 17 credits of course work from Montcalm Community College as approved by the student’s academic advisor.

Dairy Management

Because dairy farming is among the leading agricultural enterprises in Michigan, the dairy program has been developed to meet the specialized needs of the herd manager and commercial dairy farmer. Opportunities abound for persons with the combination of classroom training in the areas of dairy husbandry, nutrition, artificial insemination, crops, and farm management and the practical experience that may be obtained on any of the many co-operating dairy farms in Michigan and the surrounding states.

Programs of study tailored to meet the individual’s wants and needs are designed around the subject matter areas of agricultural economics, communications, crop and soil sciences, and agricultural mechanics. Additionally, students learn about the continuing changes in rural living, which have a great influence on agriculture.

Requirements for Dairy Management

The student must complete 48 credits from the following:

   All of the following courses (32 credits):
   - ANS 132 Dairy Farm Management Seminar .................................. 1
   - ANS 203 Principles of Livestock Feeding ................................... 2
   - ANS 215 Growth, Health and Lactation in Dairy Cattle .................... 2
   - ANS 230 Dairy Herd Management .......................................... 3
   - ANS 232 Introductory Dairy Cattle Management ......................... 3
   - ANS 235 Dairy Feed Management ........................................... 3
   - ANS 239 Dairy Health Management ........................................... 3
   - ANS 295 Structure and Function of Livestock .................................. 2
   - AT 045 Agricultural Communications ...................................... 2
   - AT 071 Technical Mathematics ................................................ 2
   - AT 101 Spanish for the Agricultural Industry ............................... 2
   - AT 293 Professional Internship in Agricultural Technology .............. 2

   Complete a minimum of 16 credits of course work in the college from the following as approved by the program coordinator in the Institute of Agricultural Technology:
   - ABM 100 Decision-making in the Agri-Food System ...................... 3
   - ABM 130 Farm Management I ........................................... 3
   - ABM 225 Commodity Marketing I .......................................... 3
   - ANS 110 Introductory Animal Agriculture ..................................... 4
   - ANS 222 Introductory Beef Cattle Management ............................. 3
   - AT 055 Agricultural Finance ................................................. 3
   - CSS 101 Introduction to Crop Science ...................................... 3
   - CSS 120 Issues in Food and Agriculture ..................................... 3
   - CSS 201 Forage Crops ......................................................... 3
   - CSS 212 Advanced Crop Production .......................................... 2

Students who do not demonstrate English proficiency through the IAT-administered Accuplacer placement test or college-level transfer credit must complete AT 045 Agricultural Communications (2 credits) or an equivalent course as approved by the program coordinator.

Students who do not demonstrate math proficiency through the IAT-administered Accuplacer placement test or college-level transfer credit must complete AT 045 Technical Mathematics (2 credits) as approved by the program coordinator.
**Electrical Technology**

The Electrical Technology certificate is an electrical apprenticeship training program with an emphasis on residential, commercial, and industrial wiring. Students study electrical codes, fundamentals, installations, motor controls, and solid state electronic applications. Throughout the program, students receive training in energy efficiency and alternate power systems. The certificate provides advanced technical training important for a successful career in the electrical field.

Integrated in the 15-month program are a wide range of disciplines through hands-on classroom and laboratory learning, and on-the-job training. The 4,000 square feet laboratory is equipped with electrical systems found in agricultural, commercial, and industrial facilities as well as systems that serve residential homes. The laboratory also has programmable logic controls, variable frequency drives, and standard AC and DC motors used in the field. The skills learned are used to become a licensed journey electrician through the State of Michigan, which is recognized by the State Electrical Administrative Board. Students who are interested may transfer into a four-year degree program at MSU upon completion of the certificate.

### Requirements for Electrical Technology

**CREDITS**

1. All of the following courses (37 to 40 credits):
   - AE 172 Electrical Wiring I ........................................... 4
   - AE 173 Electrical Occupations ....................................... 1
   - AE 182 Electrical Wiring II .......................................... 2
   - AE 185 Electrical Applications .................................... 3
   - AE 281 Electrical Wiring II .......................... 2
   - AE 284 Electrical Systems Planning .................. 4
   - AT 045 Agricultural Communications ..................... 2
   - AT 071 Technical Mathematics .......................... 2
   - AT 233 Professional Internship in Agricultural Technology .... 2
   - CSS 110 Computer Applications in Agronomy .............. 2
   - TSM 121 Fundamentals of Electricity ........................... 4
   - TSM 130 Energy Efficiency and Conservation in Agricultural Systems ........ 3
   - TSM 222 Fundamentals of Automation and Controls ............ 3

   Students who demonstrate proficiency through placement testing for AT 045 and AT 071 will take elective course work to substitute the credits in those courses.

2. The following course or equivalent certification:
   - KIN 125 First Aid and Personal Safety .......................... 3
   - Equivalent certification is current first aid and CPR certification.

3. Complete 5 to 15 credits of additional Agricultural Technology courses chosen in consultation with and approved by the program coordinator.

### Fruit and Vegetable Crop Management

The Fruit and Vegetable Crop Management program provides students an opportunity to apply practical knowledge and training on the selection, use, and management of fruit and vegetable crops. The program combines classroom instruction and theory with practical experience gained through field laboratories and a professional internship. Graduates of the program are prepared for careers in the fruit and vegetable industry.

### Requirements for Fruit and Vegetable Crop Management

**CREDITS**

Students must complete 48 credits from the following:

1. All of the following courses (18 credits):
   - AE 172 Agricultural Regulation Compliance and Safety .......... 3
   - AT 045 Agricultural Communications .......................... 2
   - AT 071 Technical Mathematics .................................. 2
   - AT 293 Professional Internship in Agricultural Technology .... 3
   - CSS 110 Computer Applications in Agronomy .................. 2
   - CSS 210 Fundamentals of Soil Science ........................... 3
   - ENT 111 Basics of Applied Entomology ............................ 2
   - HRT 109 Introduction to Applied Plant Science .................. 2
   - HRT 206 Training and Pruning Plants ............................ 1
   - HRT 207 Horticulture Career Development ...................... 1
   - HRT 218 Irrigation Systems for Horticulture ................... 2
   - PLP 105 Fundamentals of Applied Plant Pathology ............ 3

   Students who demonstrate English proficiency through the IAT-administered Accuplacer placement test or college-level transfer credit must complete AT 045 Agricultural Communications (2 credits) or an equivalent course as approved by the Program Coordinator.

   Students who do not demonstrate English proficiency through the IAT-administered Accuplacer placement test or college-level transfer credit must complete AT 071 Technical Mathematics (2 credits) or an equivalent course as approved by the Program Coordinator.

2. A minimum of 15 credits from the following courses:
   - ABM 100 Decision-making in the Agri-Food System ............... 3
   - ABM 222 Agribusiness and Food Industry Sales (W) ............. 3
   - AT 055 Agricultural Finance .................................... 3
   - AT 101 Spanish for the Agricultural Industry ................... 2
   - HRT 203 Principles of Horticulture .................................. 3
   - HRT 204 Plant Propagation ....................................... 2
   - HRT 221 Greenhouse Structures and Management ................. 3
   - HRT 243 Organic Transplant Production .......................... 1
   - HRT 251 Organic Farming Principles and Practices ................ 3
   - HRT 253 Compost Production and Use ............................ 1

3. Completion of 10 additional elective credits in the college as approved by the program coordinator in the Institute of Agricultural Technology.
Horse Management

The horse management program places emphasis on acquisition of equine husbandry skills that will prepare students for jobs in the ever-growing horse industry or for the management of their own farms and horses. Students are required to complete a one-semester placement training experience working with professionals in the horse industry. Study abroad opportunities may also be incorporated into the student’s program. The horse industry has exciting job opportunities for students who have a passion for horses and a strong work ethic. Students who complete this program will be prepared for positions ranging from assistant trainers to managers of small farms and from racetrack grooms to tack and equipment sales personnel.

Requirements for Horse Management

The student must complete 48 credits from the following:

1. All of the following courses (37 to 40 credits):
   - ABM 130 Farm Management I ........................................... 3
   - ANS 140 Fundamentals of Horsemanship ................................ 2
   - ANS 145 Horse Behavior and Welfare ................................. 2
   - ANS 146 Fundamentals of Horse Training .......................... 3
   - ANS 147 Horse Management Placement Seminar ................ 1
   - ANS 149 Horse Management Clerkship .............................. 2
   - ANS 200D Introductory Judging of Horses ....................... 2
   - ANS 203 Principles of Livestock Feeding .......................... 2
   - ANS 225 Reproduction in Livestock ............................ 2
   - ANS 240 Horse Farm Management .................................. 3
   - ANS 242 Introductory Horse Management .......................... 3
   - ANS 243 Horse Nutrition and Feeding ................................ 2
   - ANS 245 Horse Exercise Physiology ................................ 2
   - AT 045 Agricultural Communications .............................. 2
   - AT 071 Technical Mathematics ..................................... 2
   - AT 293 Professional Internship in Agricultural Technology .... 6
   - CSS 101 Computer Applications in Agronomy .................... 2
   - AT 293 Professional Internship in Agricultural Technology .... 6
   - CSS 101 Computer Applications in Agronomy .................... 2
2. Complete 8 to 11 credits of elective course work from the following:
   - ANS 110 Introductory Animal Agriculture ........................ 4
   - ANS 142 Draft Horse Basics ........................................... 2
   - ANS 148 Methods of Instructing Safe Horsemanship .......... 2
   - ANS 290 Independent Study in Agricultural Technology .... 2 to 6
   - ANS 300D Advanced Horse Judging ................................. 2
   - AT 291 Selected Topics in Agricultural Technology ............. 2
   - CSS 201 Forage Crops .................................................. 3
   - KIN 125 First Aid and Personal Safety ............................ 3
   - Study abroad .............................................................. 6

Landscape and Nursery Management

The Landscape and Nursery Management program at Michigan State University provides students an opportunity to gain the necessary skills for a successful career in the multibillion dollar green industry. The program combines classroom instruction and theory with practical experience gained through field laboratories and a professional internship. Graduates of the program work as owners, managers, buyers, or salespersons in a wide variety of horticultural industries: landscape design, construction, and management; irrigation design, installation, and management; retail garden center management; herbaceous and woody plant production; urban tree management; and public and/or private botanical gardens.

Horticulture is a complex and diversified, yet fully integrated discipline that encompasses the biological, molecular, physical, management and marketing sciences and the arts to improve the production of nutritious, high-quality and safe food, advances the development and use of new specialty crops, enhances human health and well-being, and positively impacts the natural and built environments.

Students will have opportunities to enroll in online courses, courses integrated with outreach and extension programs, and 5- or 10-week module courses. Students are extensively involved in activities beyond the classroom such as working in research laboratories; assisting in field-based projects, landscape, greenhouse, garden, and nursery operations; running the Horticulture Club’s annual spring show and plant sale; and participating in academic and field events associated with the Professional Landcare Network (PLANET).

The Landscape and Nursery Management program is offered by the Department of Horticulture in cooperation with the Institute of Agricultural Technology.

Requirements for Landscape and Nursery Management

CREDITS
1. All of the following courses (30 credits):
   - AT 045 Agricultural Communications .............................. 2
   - AT 102 Turf and Landscape Analytical Practices ................... 2
   - AT 293 Professional Internship in Agricultural Technology .... 3
   - CSS 110 Computer Applications in Agronomy ..................... 2
   - CSS 210 Fundamentals of Soil Science .............................. 3
   - ENT 110 Basics of Applied Entomology ............................ 2
   - HRT 109 Introduction to Applied Plant Science ............... 3
   - HRT 207 Horticulture Career Development ........................ 1
   - HRT 211 Landscape Plants I .......................................... 3
   - HRT 212 Landscape Plants II ......................................... 3
   - HRT 213 Landscape Maintenance .................................... 2
   - HRT 213L Landscape Maintenance Field Laboratory ............ 1
   - HRT 214 Landscape and Turfgrass Business Operations .......... 3
   - HRT 221 Greenhouse Structures and Management ............... 3
2. Complete at least 9 credits from the following courses in the college as approved by the program coordinator in the Institute of Agricultural Technology:
   - AE 153 Engine and Equipment Technology ........................ 2
   - AT 101 Spanish for the Agricultural Industry ................. 2
   - CSS 181 Pesticide and Fertilizer Application Technology .... 3
   - CSS 202 World of Turf ................................................ 2
   - HRT 204 Plant Propagation ........................................... 2
   - HRT 218 Irrigation Systems for Horticulture .................... 3
   - HRT 219 Landscape Computer Aided Design ..................... 2
   - HRT 219 Landscape Computer Aided Design ..................... 2
   - PLP 105 Fundamentals of Applied Plant Pathology ............ 2
3. Complete a minimum of 9 additional credits in the college chosen in consultation with and approved by the program coordinator in the Institute of Agricultural Technology.

Students who do not demonstrate English proficiency through the IAT-administered Accuplacer placement test or college-level transfer credit must complete AT 045 Agricultural Communications (2 credits) or an equivalent course as approved by the program coordinator.

Landscape Management

The Landscape Management program provides training for students to select, use, and manage landscape plants and lawns. Students obtain a working knowledge of plant growth, development, and identification which prepares them for careers in the green industry.

Requirements for Landscape Management

CREDITS
1. All of the following courses (25 credits):
   - AT 202 Agricultural Regulation, Compliance and Safety .... 3
   - AT 293 Professional Internship in Agricultural Technology .... 3
   - CSS 143 Introduction to Soil Science ................................ 2
   - ENT 110 Applied Entomology of Economic Plants ............ 3
   - HRT 207 Horticulture Career Development ....................... 1
   - HRT 211 Landscape Plants I .......................................... 3
   - HRT 212 Landscape Plants II ......................................... 3
   - HRT 213 Landscape Maintenance .................................... 2
   - HRT 218 Irrigation Systems for Horticulture .................... 3
   - PLP 105 Fundamentals of Applied Plant Pathology ............ 2
2. Completion of 2 additional elective credits in the college as approved by the program coordinator in the Institute of Agricultural Technology.
3. Completion of 21 credits of additional course work through Kellogg Community College, Monroe Community College, Montcalm Community College, Muskegon Community College, Northwestern Michigan College, Southwestern Michigan College, Wayne Country Community College, or West Shore Community College. All course work must be approved by the program coordinator in the Institute of Agricultural Technology.
### Livestock Industries

The Livestock Industries certificate program is designed to give students a professional advantage in the livestock production career field of their choice. Students are exposed to a broad spectrum of applied course work and hands-on education at the university’s facilities and an extensive industry internship. Students engage with leading professors, researchers, and future professional colleagues in a manner that is directly applicable to a functioning livestock operation and also develop communication skills while bridging the gap between theory and practical best management practices.

#### Turfgrass Management

A rapidly expanding turfgrass industry offers many challenging job opportunities for trained personnel. The growing demand for recreational areas and redecoration to the maintenance of beauty in America has created a shortage of turfgrass specialists.

#### Golf Course Emphasis

The golf course emphasis provides the fundamentals of turfgrass technology necessary primarily for the supervision and management of golf courses. Attractive starting salaries and many job opportunities are available with excellent potential for advancement. Previous work experience on a golf course maintenance crew is expected.

### Viticulture

The Viticulture certificate is delivered in partnership between Monroe Community College, Northwestern Michigan College, Southwestern Michigan College, the Viticulture and Enology Science Technology Alliance (VESTA), and the Michigan State University Institute of Agricultural Technology. The combination of online viticulture courses delivered by experts from throughout the United States, hands-on experience at local vineyards, fresh markets, juice processors, packing plants and wineries and fundamental plant science courses provide graduates with the specific expertise and skills needed for careers in the rapidly expanding grape industry – supplying grapes for table, juice and wine making.
Graduates of the program will receive a certificate from the Michigan State University Institute of Agricultural Technology. Students may continue their course work to obtain an Associate in Applied Science Degree from the community college partners in addition to the certificate from Michigan State University. Should students wish to continue their education, the appropriate pre-designated credits may be applied to a bachelor's degree program at Michigan State University if students meet the established transfer guidelines.

2. Complete 21 credits of additional course work through Monroe Community College, Northwestern Michigan College or Southwestern Michigan College as well as 6 credits through the Viticulture and Enology Science and Technology Alliance. All course work must be approved by the student’s program coordinator.

Admission

Applicants for technical programs must be high school graduates. A strong background in communications, mathematics, and science will help prepare the student for successful completion of a technical training program.

The admission process includes a consideration of the student's academic record, work experience, recommendations from employers, test scores, and other criteria. In some cases, students may be invited to Michigan State University for an interview.

Financial Aid

Institute of Agricultural Technology students are eligible for financial aid. Scholarships are provided by industry groups and individual businesses, and are awarded to students who demonstrated superior scholastic ability or an outstanding work record.

Veterans Education

The programs offered by the Institute of Agricultural Technology are approved by the Department of Veterans Affairs as Cooperative Veterans Training Programs. Under some Chapters of Title 38, U.S. Code, veterans may receive educational benefits. Veterans planning to enroll should contact the Veterans Certification Section of the Office of the Registrar to determine their eligibility.

Michigan Works

Students in the Institute of Agricultural Technology are eligible for sponsorship under the guidelines of the Michigan Works Program. Students must arrange sponsorship with the appropriate Michigan Works office.

Institute of Agricultural Technology Transfer Student Admission

Institute of Agricultural Technology students who have completed their respective Institute of Agricultural Technology programs will, upon completion of the applications process, be considered for transfer admission to Michigan State University. Acceptance is determined by the applicant’s previous academic record and his or her proposed program.

To complete the application process, the student must:

1. Complete and submit a signed request (Student Intent to Transfer Form) to the Institute of Agricultural Technology, as soon as the student develops an interest in transferring, in order to inform the Institute of Agricultural Technology of the desire to transfer to a baccalaureate program. The request must be signed by the program coordinator and by the Institute of Agricultural Technology Director in order to facilitate proper student advising by the Institute of Agricultural Technology.

2. Have a minimum grade point average of 3.0 upon completion of the Institute of Agricultural Technology program and satisfy all other requirements for admission.

3. Earn a minimum grade of 2.0 in WRA 110 or its equivalent.

4. Earn a minimum grade of 2.0 in MTH 103 or its equivalent.

5. Apply to the baccalaureate program using the application form from the Office of Admissions and Scholarships. It is recommended that students apply at the beginning of the semester they are to graduate from the Institute of Agricultural Technology.

6. Additional requirements may apply for limited enrollment programs.

7. Complete all other undergraduate application requirements. For additional information regarding transfer admission, refer to the Transfer Student Admission statement in the Undergraduate Education section of this catalog.

MSU AgBioResearch

Douglas D. Buhler, Director

The research programs of MSU AgBioResearch help to keep Michigan agriculture competitive, foster stewardship of natural resources, ensure food safety, build stronger, healthier families and communities, and spur economic development throughout the state. The mission of AgBioResearch - to engage in innovative, leading edge research that ensures the wise use of agricultural, natural and community resources and enhances the quality of life in Michigan, the nation and the world - is an integral part of Michigan State University's responsibilities as a land-grant university.

AgBioResearch is composed of a network of on-campus laboratories and research centers across the state. More than 300 faculty members from 30 academic departments, research institutes and laboratories across MSU receive support from AgBioResearch. In addition to the College of Agriculture and Natural Resources, AgBioResearch is affiliated with the College of Arts and Letters, College of Communication Arts and Sciences, College of Engineering, College of Natural Science, College of Osteopathic Medicine, College of Social Science, and the College of Veterinary Medicine. AgBioResearch helps Michigan agriculture compete nationally and globally by developing ways to increase production efficiency, improve product quality and meet market needs. Other research focuses on food safety and security, natural resource management and the emerging bioeconomy. Research also concentrates on economic development, recreation and tourism, climate change and water quality.

AgBioResearch activities are conducted in laboratories, greenhouses and several south campus experimental lands in East Lansing. Research also takes place at the 14 off-campus field research centers ranging from a forest biomass innovation center in
the Upper Peninsula to fruit and vegetable research centers in the southernmost counties of the state.

AgBioResearch, following in the land-grant tradition, is about more than agriculture. It is an idea for higher education that combines practical information with innovative scientific studies to generate knowledge to meet rapidly changing needs in the state and nation.

Organized under the Hatch Act of 1887, AgBioResearch has been part of Michigan State University for most of the university’s 150-year history. Funding comes from the state and federal governments, commodity groups, industries, foundations and individuals.

MICHIGAN STATE UNIVERSITY EXTENSION

Jeffrey Dwyer, Director

Michigan State University (MSU) Extension is the main outreach arm of MSU. Thanks to more than 600 faculty and staff members located throughout Michigan, Extension provides education and resources to help people improve their families, communities and businesses. Whether it is helping grow Michigan’s agricultural economy, capturing opportunities that use our natural resources sustainably, controlling healthcare costs by giving individuals the information they need to manage chronic illness, or preparing tomorrow’s leaders, MSU Extension is creating opportunities and building communities that make Michigan strong, prosperous and a great place to live.

Because of its vast network of professionals with relationships through the state, MSU Extension is a nimble organization that can quickly respond to emergent issues. For example, when the Flint water crisis hit, MSU Extension was quick to respond with nutrition education for affected residents. When farm prices dropped dramatically, the organization was able to immediately provide stress management workshops to help the state’s farmers and their families. The MSU Extension behavioral health team provides educational materials and resources to families struggling with opioid addiction.

Established in 1914, MSU Extension thrives on a three-way partnership between the U.S. Department of Agriculture and state and local governments. Campus-based faculty members in four MSU colleges share expertise derived from research and other scholarly activities to support local Extension programs.

MSU Extension offers summer internship opportunities for young people eager to make a positive difference in Michigan communities. Interns have an opportunity to learn about Extension programming in all four statewide program areas: agriculture and agribusiness, health and nutrition, children and youth, and natural resources and economic and community development.

Agriculture and Agribusiness

Agriculture continues to be an important economic driver in Michigan. MSU Extension works with all segments of Michigan agriculture to support the production of safe, high-quality, nutritious food and biobased fuels and materials. MSU Extension develops and delivers science-based research and need-based programming to advance the profitability and sustainability of Michigan farms, to help producers improve water and land stewardship, and to increase consumer understanding of modern agriculture. Programs are also available for beginning farmers and those considering new ventures in specialty crops or alternative commodities. In addition, MSU Extension provides counseling for food and agricultural entrepreneurs, including reviewing new business ventures that explore the development of value-added products. All of these efforts help to position Michigan as a leader in providing affordable, quality, safe food for local, national and international markets.

Health and Nutrition

Michigan State University Extension’s strength is its community-based approach to meeting local needs and its unwavering efforts to serve the needs of children, families and communities, regardless of whether they are in urban, suburban or rural settings. In all of its programming, MSU Extension promotes healthy lifestyles and equips Michigan residents to take control of their health through research-based education and action-oriented tools. Our goal is to help people lead healthy lives and contribute to their communities.

Children and Youth

The goal of MSU Extension’s children and youth programs is to ensure that every Michigan child has the necessary knowledge, tools and skills to lead a healthy and productive life. By providing children with a continuum of learning opportunities, resources and support from birth through age 19, MSU Extension helps to prepare Michigan youth for the future.

MSU Extension’s early childhood education programs serve families of children from birth to age 8 by providing parents and caregivers with educational resources related to child development, emerging literacy and school readiness. As youth become older, ages 5-19, MSU Extension supports them through Michigan 4-H. This program helps young people learn critical life skills while exploring their interests and passions. Through hands-on learning opportunities with positive adult role models, youth experience the benefits of working together while growing their confidence, civic engagement and leadership skills, and sense of responsibility. All programs encourage the development of employability skills and career exploration and are available in hundreds of project areas, including science and technology, arts and global education, healthy living, leadership and service, environmental education, animal science and entrepreneurship.

Natural Resources and Community and Economic Development

MSU Extension faculty and staff members help residents build stronger communities by enhancing community engagement, strengthening government leadership and financial structures, advancing entrepreneurship, fostering natural resources stewardship, developing local food systems and enhancing the quality of place. Outreach programs in home ownership and financial literacy education also strengthen Michigan communities and families.
MSU PRODUCT CENTER
FOOD-AG-BIO

Thomas Lyons, Director

The MSU Product Center Food-Ag-Bio was established in 2003, by the Michigan Agricultural Experiment Station (now AgBioResearch) and Michigan State University Extension, to improve economic opportunities in the Michigan agriculture, food and bio-products sectors. The Product Center assists new entrepreneurs and existing businesses to develop and commercialize high value, consumer-responsive products and services. The Center serves as a single doorway for these businesses to MSU’s vast and varied technical expertise, research, outreach, and educational services related to food and agriculture. The Center has four interrelated programs: Venture Development, Accelerated Growth Services, the Food Processing and Innovation Center (FPIC) and Strategic Research.

Venture Development utilize campus-based staff and the state-wide MSUE Innovation Counselors Network to counsel business ventures from earliest idea to venture launch. In addition to business development, technical expertise in product development, food processing, labeling, and regulatory compliance is provided.

Accelerated Growth Services provides counseling and strategic planning services to well-established agriculture and food businesses that have opportunities for growth. Also serving growth-stage businesses is the FPIC, which is a fully-licensed food processing plant, where later-stage food companies can test new product lines and sell this product into the marketplace, reducing their risk.

At all levels of venture size and scope, counselors nurture new market and product development opportunities by tapping into Michigan State University’s technical expertise. Project specialists also collaborate with external consultants, industry groups and governmental agencies.

Strategic Research develops the information needed to support evaluation of concepts, products and businesses. It also produces long-range studies for Michigan’s agricultural, food and bio-products sectors. Most important among these is periodic estimates of the economic value of Michigan’s food and agricultural system, and the Michigan Food and Agricultural Index. This information is crucial to public and private decision makers.

INSTITUTE of WATER RESEARCH

Darrell W. Donahue, Director

The Michigan State University Institute of Water Research was established in 1961 to promote and coordinate water research, education, and advisory services for the inland waters and Great Lakes of Michigan. Serving as a bridging organization, the Institute is able to work across disciplinary boundaries and develop partnerships with campus departments, local and state agencies, and other Universities and organizations in the broad water arena. The Institute is a focal point to which University and off-campus communities can turn for advice and assistance in support of water research issues. It is one of 54 state institutes designated by Congress to administer research funds authorized under the Water Research Resources Act of 1984. With this base and through private, state, and federal funds, the Institute supports integrated research projects for faculty and graduate students on campus and in other universities.

The Institute provides leadership in building partnerships and implementing programs at the state, regional, and international level, and in solving real-world water-related problems. It uses advanced data management, decision support systems, integrated social networking components, and cutting-edge technology to address land and water resources issues such as nonpoint source pollution, nutrient reduction and ecological processes. The Institute also coordinates online education and training programs, including a professional certificate program for surface and ground water protection and watershed management. Through its outreach programming and dissemination of information on water research, the Institute provides citizens throughout the state and region with science-based information and knowledge that enables them to make better informed decisions regarding water issues.
